

## Craig Hull

Please accept this message as my request for denial of any further permits or authorizations for the Big Creek Hog Farm. The Karst topography of the area makes land application of wastes a direct connection to the shallow aquifers and adds nutrient loading to a fragile Buffalo River ecosystem.

The efforts of conservationists and naturalist over the past 50 years has led to a national river of great popularity and extensive use for active and passive recreation. Please help this resource remain un-polluted by stopping industrial scale agriculture in the watershed.

Sincerely,

Craig Hull
