Comments:

The Arkansas Watertrails Partnership works with other organizations to create paddling trails in Arkansas. We have engaged in a strong volunteer effort to clean trash out of the Buffalo River. This summer we have seen a river choked with algae down the entire length of the river and increasing in severity after the confluence with big creek. Our members have floated the river for over 40 years and have never seen such polluted conditions. We are confident that C&H Hog CAFO is the major contributor to this situation. We strongly urge you to deny any new permit for C&H.
