

# Anita Sawyer

Hi,

My name is Anita D. Sawyer. I live at 4510 Rosemont Drive, North Little Rock, Arkansas 72116

My email address is: twobears138@comcast.net

I tried to fill out the comment form several times and it will not submit after I have filled it out. Here are my comments:

While I applaud the efforts of the Hog Farmer(s) to use naturally occurring hog waste as fertilizer instead of chemical compounds which could be found to cause cancer, I do not think any animal waste should be spread on fields or contained in holding ponds near lakes, creeks, rivers, or streams. It seems like it would just be common sense that runoff of water from such fields and storage ponds would flow into the aforementioned bodies of water and thus contaminate them. This contamination could lead to the death of fish, add to pollution, and make water unsafe to drink, as well as be unsafe to swim, wade, or boat in.

Please look at restricting ALL animal and inorganic fertilizer sources near any bodies of water. Their impacts are/could be drastic to Arkansas and All Arkansans.

Thank you,

Anita D. Sawyer
