I think that it is important to the health of the entire echo system to restore wolf population with in their horstic home ranges to insure the health of oour deer and elk populations. CWD and hoof rot can infect entire heards of deer and elk if sick indivduals are left to mingle among the rest of the population. Predation by wolves of sick animals would reduce teh spread of disease. I believe that livestock should not be allowed to graze in areas populated by wolves and maybe some rancehers are baiting the wolves with calves and sick cow in order to have the wolves killed by WDFW.
