Please utilize NON LETHAL means of management to control Washington's wolf population. There is absolutely no reason or justification behind simply killing packs. Large carnivores are a crucial element in a balanced eco system and we as humans have a responsibility to maintain that balance.

There is no reason at all that anything besides non lethal methods should be used on our wolves. Please focus on educating local residents and farmers of these methods.

Outlaw the killing of wolves. There are established practices people can learn in order to safely deter wolves from interfering with their cattle and other livestock.

Thank you,
