

Dorothy Maurer

We are always attempting to interfere with the balance of nature and the long term results always turn out to be a disaster. Look at deforestation, coastal development, fertilizer run off in our waters, etc. when will we ever learn? It has been proven that areas where wolves are allowed show a great improvement in reforestation, increased habitat for other species, purifying the water, etc. everything works together to improve the land. Thank you for taking the time to read this. Dorothy Maurer
