

## Donald Kaleta

I do have a suggestion to mitigate Wolf Livestock Depredation and can be viewed at [WWW.FENCEFLAGWOLFTRAINING.COM](http://WWW.FENCEFLAGWOLFTRAINING.COM). This training comprises the competent installation and maintenance of DC Electrified fencing with a VISUAL FENCE-FLAG "pain learned" training to deter future trespass of a Livestock confinement barrier. This is NON lethal training that will be VISIBLE from great distance, especially in darkness.

Dear Interested Parties,

As Wolf Depredation on Domestic Livestock escalates, in the U.S. and throughout the World with the Wolves successful re-introduction populations spread, the contentious anger between Livestock Producers and Conservationists does also spread. My published research Blog at [WWW.FENCEFLAGWOLFTRAINING.COM](http://WWW.FENCEFLAGWOLFTRAINING.COM) is a tangible suggestion, with minimal cost, to mitigate the anger on both sides of the fence!

Regards,

Don.
