

## Emily Coles

It is too soon to create a “post-recovery” plan for wolves! Instead of racing to create a post-delisting plan, the Washington Department of Fish and Wildlife must focus its attention on current wolf-management needs, including: (1) Resolving conflicts between livestock and wolves WITHOUT harming either; (2) Conducting extensive public education on wolves. This is emphasized in the current plan but has not been done by you, despite the fact that all wolf experts say public education is the single most important action to take for successful wolf conservation. Additionally, under the current wolf plan and any future wolf plan, management guidance, policies and protocols — and especially those which could result in wolves being killed — must be developed through a science-based, public rule-making process that results in transparent, rational and enforceable strategies. Therefore I urge you to: (1) Stop cherry-picking science to justify wolf-killing; (2) Answer the global call by scientists to protect and conserve apex predators; and (3) Use every opportunity to extol the value of top predators in keeping nature healthy, and cease current messaging that prioritizes livestock over wolves. The public will fail to see any reason to coexist with wolves if the department fails to explain that wolves are ecologically important and worth conserving. Thank you for considering my comments.
