

Gail Bliss

Now is not the time to be creating a “post-recovery” plan for wolves. Now is the time to be working on the goals set forth in the current plan that have not been met yet. Instead of racing to create a post-delisting plan, the Washington Department of Fish and Wildlife must instead focus its attention on current wolf-management needs. This includes: (1) Resolving, through nonlethal means, conflicts between livestock and wolves, which are taking place in some of the state's best habitat for wolves; and (2) Conducting extensive public education on wolves. This is emphasized in the current plan but has not been done by you, despite the fact that all wolf experts say public education is the single most important action to take for successful wolf conservation. Additionally, under the current wolf plan and any future wolf plan, management guidance, policies and protocols — and especially those which could result in wolves being killed — must be developed through a science-based, public rule-making process that results in transparent, rational and enforceable strategies. Therefore I urge you to: (1) Stop cherry-picking science to justify wolf-killing; (2) Answer the global call by scientists to protect and conserve apex predators; and (3) Use every opportunity to extol the value of top predators in keeping nature healthy. Work with ranchers to show and prove to them and the public that wolves and livestock can coexist. The public needs to see that wolves are ecologically important and worth conserving. Thank you for considering my comments.
