

## Dwayne Cosner

The wolf's maybe endangered in WA, BUT THE TRUTH IS, over all they ARE NOT threatened, their numbers are very healthy in north America, in including Canada and Alaska. I think it is REALLY irresponsible to allow their numbers to increase, putting them in harm's way with mankind, putting mankind in harm's way, so on and so on.

Its is also extremely irresponsible with the Grizzly bear re-interdiction just as it is with Wolves.
