

Jean Naples

I am writing as a public health advocate who strongly supports full protection for our endangered wildlife that includes wolves. Please be aware that creating a “post-recovery” plan for wolves at this time is premature, as Washington is still far from meeting the goals set forth in the current plan. Instead of racing to create a post-delisting plan, the Washington Department of Fish and Wildlife must instead focus its attention on current wolf-management needs which includes wolf recovery and conservation. This includes: (1) Resolving, through nonlethal means, conflicts between livestock and wolves, which are taking place in some of the state's best habitat for wolves; and (2) Conducting extensive public education on wolves. This is emphasized in the current plan but has not been done by you, despite the fact that all wolf experts say public education is the single most important action to take for successful wolf conservation. Additionally, all current wolf plans and any future wolf plan, must include management guidance, policies and protocols. These policies and management must very carefully evaluate any policy that could result in wolves being killed. All policies and protocols must be developed through a science-based, public rule-making process that results in transparent, rational and enforceable strategies. Therefore I urge you to: (1) Stop cherry-picking science to justify wolf-killing; (2) Answer the global call by scientists to protect and conserve apex predators; and (3) Use every opportunity to extol the value of top predators in keeping nature healthy, and cease current messaging that prioritizes livestock over wolves. The public will fail to see any reason to coexist with wolves if the department fails to explain that wolves are ecologically important and worth conserving. Thank you for considering my comments and recommendations as you formulate all plans for state delisting of wolves in Washington state.. Sincerely, Jean Marie Naples, MD-Ph.D.
