

Priscilla Mezrahi

- (1) Stop don't use inappropriate science to justify wolf-killing;
- (2) Answer the global call by scientists to protect and conserve apex predators in this extinction crisis.
- (3) Use every opportunity to promote the value of top predators in keeping nature healthy, and cease current messaging that prioritizes livestock over wolves. The public will fail to see any reason to coexist with wolves if the department fails to explain that wolves are ecologically important and worth conserving. All animals deserve to be respected.
