

## Brittney Coleman

Every year Americans spend millions on their pet dogs. Yet there remains a disconnect with how we perceive the ancestors of our beloved pets. Without wolves (and their intelligence and social nature) we never would have been able to experience the bonds we form with "Man's Best Friend." Wolves are a critical part of the food chain as an apex predator, who can keep prey populations strong and healthy but eliminating the weak and the sick from herds. How can we stand by and allow them to be slaughtered? They aren't that much different than our pet dogs!! WE NEED TO SAVE THEM Creating a "post-recovery" plan for wolves at this time is premature, as Washington is still far from meeting the goals set forth in the current plan. Instead of racing to create a post-delisting plan, the Washington Department of Fish and Wildlife must instead focus its attention on current wolf-management needs. This includes: (1) Resolving, through nonlethal means, conflicts between livestock and wolves, which are taking place in some of the state's best habitat for wolves; and (2) Conducting extensive public education on wolves. This is emphasized in the current plan but has not been done by you, despite the fact that all wolf experts say public education is the single most important action to take for successful wolf conservation. Additionally, under the current wolf plan and any future wolf plan, management guidance, policies and protocols — and especially those which could result in wolves being killed — must be developed through a science-based, public rule-making process that results in transparent, rational and enforceable strategies. Therefore I urge you to: (1) Stop cherry-picking science to justify wolf-killing; (2) Answer the global call by scientists to protect and conserve apex predators; and (3) Use every opportunity to extol the value of top predators in keeping nature healthy, and cease current messaging that prioritizes livestock over wolves. The public will fail to see any reason to coexist with wolves if the department fails to explain that wolves are ecologically important and worth conserving. Thank you for considering my comments.
