Wolf conservation and monitoring

Habitat connectivity

**Do you have general comments about the scope of Washington's updated wolf conservation and management plan?**

Available science indicates that all of our large predators are endangered or heavily stressed by human incursions on their habitat. Science also shows that wolves, unlike livestock, contribute to a healthier ecosystem. As a voter and taxpayer I do not wish my tax dollars to be used to support private livestock businesses at all, much less at the expense of valuable parts of the natural world, such as wolves.
