

Anne Carter

**What is your gender?**

Female

**Age?**

45

**County (or Counties) of Primary Residence?**

Grant

**Residential setting:**

Rural

**Do you identify yourself as any of the following?**

Hunter

Livestock Producer

Outdoor Recreationist

**WDFW has identified a list of impact topics to include in the Plan/EIS. Impact topics are a means of organizing the discussion of issues and analysis of impacts. Impact topics can be thought of as chapter or section headings in the Plan/EIS.**

**Please review this list and add other topics, or items that fit under these headings.**

**Please check the topics you view as most important.**

Wolf-livestock conflicts

Wolf-ungulate interactions

Wolf interactions with other species

Wolf-human interactions

Wolf hunting

Land management

Information and education

**Do you have general comments about the scope of Washington's updated wolf conservation and management plan?**

These Canadian Grey wolves are a non-native and invasive species of wolf to Washington State. The WDFW are going out of there way to remove other non-native species of wildlife from area's of the state (wild pigs and wild goats). They should not be allowing the Canadian wolves to be here either.

They should be removing them and taking them back to Canada, where federal scientist removed them from in the first place.

The non-native wolves are destroying the fragile ecosystem of eastern Washington (because they do not belong here). They are also carriers/spreaders of hydatid disease. They are infecting the ecosystem of this highly contagious disease that kills off the ungulates and infects people. There is no cure!

University of Idaho has a major study going on for this disease in regards to the wolves spreading it. There are at least 5 people in Idaho infected because of the wolves.

WDFW are not counting all the wolves in the state. There are wolves in Grant and Adams County's! They have been reported....WDFW refuses to count them or remove them.

If WDFW can't even count them all....why are they trying to "manage" them?

They are non-native and shouldn't be here in the first place.

The best plan for the wolves is to round them up and return them to the Canada Arctic where they got them from! Be consistent in how the department handles non-native species and predator's.

These wolves are also not a indangered species of wolf. There are thousands of them in Canada....the place where they belong and are from! Send them back and stop protecting a non-native species of animal that doesn't belong here. Before they damage our native ungulate population to the brink of extinction.

Conservative our actual native deer and elk. Remove the non-native wolves!
