Do you have general comments about the scope of Washington's updated wolf conservation and management plan?

Due to my own experiences in our forests I strongly believe the wild management plan must contain wolf number controls. These include hunting and trapping for affected areas such as NE Washington. The units in this part of the state such 113, 117 and 121 are suffering from an imbalance in predator v prey ratio. Draw tags or limited general season should be considered for wolf in these areas. Thank you.
