Michael Poplin

I want to show my support of Movi testing of all domestic sheep and goats through an AAVLD accredited diagnostic lab, regardless of age, prior to import into Alaska. I also support adding Movi to the Reportable Disease List while requiring same day reporting. Whether you're a outdoorsman or not, it only makes sense to protect the states wildlife and these tests are a step in the right direction. I believe that this testing also affords the opportunity to put some science behind Movi and possibly find a way to eradicate it.
