---

To whom it may concern,

I have been following the concern about Movi getting into our wild sheep populations since it came up in Alaska. Given the fact that there are 2 cases within a 10 mile radius of my home and my love of sheep and sheep hunting, I am very concerned about the health of our wild sheep or other wild stocks in Alaska.

I SUPPORT the testing of domestics but of all ages including 2 months old and younger. There is too huge of a risk to our wild sheep populations not to do something. The small amount of domestics in Alaska vs the large wild populations is extremely important to the health of the wild stocks and the economy also ub Alaska.

Please consider my support to test domestics but add all ages or do not allow 2-month old into the state.

Thank-you for consideration of my opinion.
