

Matt Snyder

I'm a hunting guide specializing in Dall Sheep hunts. So the wild sheep are very important to me. I feel all sheep/goats should be tested for Movi, not just those over 2mo of age

-require an accredited diagnostic lab to do the testing

-move Movi up on the Reportable Disease List so that when someone discovers Movi in their animals, they need to report it the same day to the State vet so they can begin to work on risk mitigation asap
