

# Frank Entsminger

I support the required testing and add these comments

- test all age sheep/goats for Movi, not just those over 2mo of age

- require an accredited diagnostic lab to do the testing

- move Movi up on the Reportable Disease List so that when someone discovers Movi in their animals, they need to report it the same day to the State vet so they can begin to work on risk mitigation asap

Thank you for your consideration of my comments.
