

Ryan DeBonis

The proposed regulation should remove in its entirety the following paragraphs: section 18 AAC 36.015(5) and 18 AAC 36.135(6). Sheep and goats under 2 months of age may also be Movi carriers/infected animals. By allowing younger infected goats a free pass the intent of the regulation won't be accomplished and we still struggle to control this virus. The goal should be Movi free in the state which does not seem to be how the regulations are currently structured. My recommendation is to remove the referenced paragraphs in their entirety and require ALL imports to require negative test results.
