

Kristen Falke

Mrs. Colvin,

Please explain to me why material with natural radiation requires disposal in the first place? Where has this material been disposed of prior to this proposed change in regulation, if not in landfill? Who definitively benefits from this deregulation?

Based on the probability that your answers will not satisfy my views supporting the unequivocal importance of protecting our environment-our "natural occurring environment" at all cost; I am submitting my opposition for the proposed change.

Deregulation of any and all environmental protection protocol currently in place poses a far more considerable negative impact on human society than economic justification can provide.

Thank you for your time,

Kristen Falke
