

Saima Chase

Please include Kotzebue in the storm drainage projects. We are barely above the sea level. Our yard floods every single spring on our block. The drains that the City have put in YEARS ago always flood, they cannot handle the amount of snow runoff there is nowadays. We need help with updating our storm drains and helping move water over the month of May and early July. Especially with the heavy snowfall we've been getting in the past 8-10 years. Global warming has brought more storm systems to our city and our snow dump is WAY more than it used to be and the drains are always failing. Also we have people plowing into empty lots and that melts and overuses the drains. we need better lift stations to get rid of ALL the snow runoff.
