

Ruby Mendota

Our air and land and water our EARTH, trees, all animals, including humans cannot tolerate any additional nuclear fallout. Nuclear energy in our world has the power to kills us and all life on earth. So this question about continuing with nuclear power is of massive importance. We human who created and use this deadly power are responsible for the rest of life, we can kill or we can save. I believe it is time to move away from all that is nuclear, and begin to urgently tend the earth that fees and and quenches our thirst and makes our homes and gives us air fit to breathe. So this seemingly innocent question is in reality a huge consideration for now and for all life in the future.

Your choice could take us on a dangerous pathway to destruction or begin a new phase if increased care for all earth, all life. Your Live, My life. So I ask you to say NO to any increase in nuclear power, and to find ways to live that can enhance life. Thank You!!!
