

Kaitlin Oliva

I am in support of Soil Treatment Technologies, LLC (STT) for a Soil Remediation Unit in Nikiski.

As a Nikiski resident, 3rd generation, and environmentalist who has managed soil remediation sites, this facility would be a great addition to the community.

The resumes of the managers for this facility are knowledgeable with broad experiences in environmental requirements that would benefit the community.

The location of this site is optimal as it puts it in an area that is already established as industrial, with residents no closer than some are to other emission producing areas.

I believe that in the long term the purpose of this facility would be beneficial to the community not just in an industry scale but residential as well.
