

David Watts

Thank you for allowing public comment.

In broad agreement with the public comments submitted by multiple tribal and municipal agencies, I oppose any and all diminutions in the number or intensity of protections for human and environmental health and safety. For example, I oppose:

- any decrease in the quality of the standards for oil spill prevention and response
- a decrease in the number of discharge exercises
- the dropping of RCACs for Prince William Sound and Cook Inlet as required communication partners
- the dropping of commitments to staying informed about best available technologies
