

Kyle Ramirez

Comments from second public hearing

1 KYLE RAMIREZ: Regarding -- going
2 back to the lift station, I'd like to, you know,
3 reiterate the fact that we should take that under
4 review, with the alarms and some of the different
5 technology as well. You know, there's some places
6 where if you put in a 300-gallon one, that you
7 would never be able to utilize more than half of
8 its capacity, even if you put it in, because of how
9 the ground or the water table and some of the
10 onsite restrictions would make it where you had to
11 put it in. You would never be able to use that
12 full capacity of it.

13 And then going to the regulation
14 rewrite, I think there's a lot of good stuff in it,
2 but I think we need to spend a little more time and
3 refine some of the proposed regulation changes and
4 just make sure they actually work in real life, and
5 they're not causing us another problem down the
6 road.
