

Shiela Finch

70 mph winds common along the proposed trucking route will likely limit the effectiveness of any ore truck tarping system), or at a break-down yard in North Pole or Fox, toxic elements included in that dust and rock (arsenic, lead, cadmium, etc) that could get into waterways along the route, provisions for cleaning up a spill of mine ore along the corridor should a trucking accident occur, and the claim that the mine life will be 4.5 years when it is clear that this is a minimum estimate.
