Reclamation Plan F20232626RPA & Waste Permit Plan

I would like to voice my opposition to the approval of the above permits, until an Environmental Impact Statement is completed.

The 248 mile route of travel for these large trucks, will cross many bridges over streams that contain salmon and other wildlife. The issues of tire shedding and waste dust from the ore, which is considered potentially acid generating mineral leaching, will end up on our roadways and rivers & streams.

The waste management plan should also include dealing with potential ore spills, spent tires and garbage left along this corridor.

Please provide the opportunity for all sides to be heard at a public hearing regarding these incomplete permit applications.

Thank you,

Grace Becker
