What methodology should DEC use to revise HHC in State Water Quality Standards?

Something with higher standards than we have now.

Should, and if so, how should DEC use the *EPA Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health (2000)* ?

Update the standards as so much more information is out now ~22+ years last. Following old data is bad news!

Comments related to HHC Formula Input:
Bioaccumulation/Bioconcentration values?

I'm not a scientific expert

Comments related to HHC Formula Input: Body Weight

I weight 175lbs

Comments related to HHC Formula Input: Cancer Risk Level

High with these old standards

Comments related to HHC Formula Input: Cancer Slope Factor

Cancer should slope to less NOT MORE- Change the standards!!!

Comments related to HHC Formula Input: Drinking Water Intake

Tap water daily. Save us!

Comments related to HHC Formula Input: Fish Consumption Rate

Multiple times a week

Comments related to HHC Formula Input: Reference Dose

Fish oils daily. Eat salmon or halibut 2x/week

Comments related to HHC Formula Input: Relative Source Contribution

Lakes, rivers, oceans

Other comments that may be related to how DEC revises HHC

Huh?!
