

Mahmud Fiti

The MPCA must deny the water quality certification and permit with conditions being sought by Enbridge. We should not be putting American Citizens and water bodies at risk for the foreign interests of a Canadian fossil fuels company. Denying the 401 Water Quality Certification will protect vulnerable wetlands by Enbridge's Line 3 project. The water, the wild rice are irreplaceable and culturally important to all Americans and the Indigenous in particular. We must honor our treaties with the Indigenous Nations of Turtle Island. I am writing in strong opposition to granting Enbridge this certification and permit. Denying the 401 Water Quality Certification ensures the peoples water will be protected. The 401 certification and conditions part of the 404 permit must be denied
