

# Ruth Starks

I oppose the Enbridge Line 3. This is what I understand to be true about the situation/effects: 56% of Mn waters are already contaminated, the pipeline would have a detrimental effect on Minnesota's economy, natural resources, and public health as well as a climate impact of 50 coal plants. It would also violate the rights of indigenous people. These risks are too great when renewable sources of energy are superior in every way.
