

Michelle Tripp

Water Gremlin has time and time again proven themselves to be a bad neighbor. I am concerned that even with all these guidelines in place they will continue to push the upper limits of pollution as they have. I don't believe in their ability to properly keep records and even inspections show complete employee disregard for proper handling of hazardous waste. I am concerned about the fact that they are still using a chemical which is no better than the TCE already shown to cause serious harm in people.
