EXHIBIT 2
Spreadsheet Summary of Water Gremlin Key Comments on Permit and Status of Resolution dated August 19, 2022

Page	Reference to Permit Section	Original Draft Permit Text Provided by MPCA in April 2022	Water Gremlin Comment	July 2022 Preliminary Draft Permit Text	Resolved?
5	Facility description	The facility manufactures lead (Pb) metal products fabricated using refined material purchased from local recycling facilities. Battery terminal posts are the primary product and account for the majority of production at the facility. Other fabricated products include lead and tin sinker weights for fishing applications, and lead components for ammunition. Following fabrication, battery terminal posts are treated with a coating to protect lead products from corrosion during shipping.	The facility manufactures lead (Pb) metal products fabricated using refined material purchased from recycling facilities. Battery terminal posts are the primary product and account for the majority of production at the facility. Other fabricated products include lead and tin sinker weights for fishing applications, and lead components for ammunition. Following fabrication, some battery terminal posts are treated with a coating to protect lead products from corrosion or improve fit with other battery components.	The facility manufactures lead metal products fabricated using refined material purchased from recycling facilities. The facility produces battery terminal posts for automotive, marine and other consumer, commercial, governmental, and military vehicles and equipment. Other fabricated products include lead and tin sinker weights for recreational fishing applications, and lead components for governmental, commercial, recreational and personal munitions. Following fabrication, some battery terminal posts are treated with a coating to protect the products from corrosion or to improve fit with other components.	Yes
5	Description of Permit Additions	Incorporation of the Stipulation Agreement (Agreement) and Administrative Order (Order). The permit incorporates specific provisions from the Agreement, executed March 1, 2019, and Order, signed January 17, 2020, which are to be continued into the permit term.	Terminate the Agreement and Order and delete this paragraph. The air permit contains all the necessary requirements from these documents.	These documents are not terminated with the issuance of Permit No. 12300341-101.	No
5	Description of Permit Additions	The Agreement required an air emissions risk analysis (AERA) and dispersion model to determine the health risks of t-DCE and lead emissions from the facility.	The 2019 Stipulation Agreement did not have a requirement to do an AERA or air dispersion model.		No
5	Description of Permit Additions	Addition of continuous emissions monitoring system (CEMS) in the battery terminal post coater stack. The permit includes a VOC CEMS in the battery terminal post coater stack (STRU 73). This was required temporarily by the Agreement to monitor the occurrence of emissions from the coaters and quantify the amount of t-DCE (VOC) leaving the coaters to verify compliance with solvent use limits required by the Agreement. Permanent operation and maintenance of a VOC CEMS, record keeping of CEM results and CEM correlation validation is required by the permit as a supplement to the main compliance determination method of record keeping of daily material usage. Other supplemental requirements include quarterly VOC solvent inventory audits, and reporting.	Remove the CEMS requirement for STRU73. It does not provide sound data and is redundant to the tracking and inventory requirements.	Addition of continuous emissions monitoring system (CEMS) in the battery terminal post coater stack. The permit includes a VOC CEMS in the battery terminal post coater stack (STRU 73). This was required temporarily by the Agreement to monitor the occurrence of emissions from the coaters and quantify the amount of t-DCE (as VOC)leaving the coaters to verify compliance with solvent use limits required by the Agreement. Permanent operation and maintenance of a VOC CEMS, record keeping of CEM results and CEM correlation validation is required by the permit as a supplement to the main compliance determination method of record keeping of daily material usage.	No
6	Description of Permit Additions	Addition of solvent vapor remediation system. The permit includes the addition of the sub-slab depressurization and solvent vapor extraction system with associated GAC canister control equipment to capture existing (and future) sub-slab solvent vapor contamination identified during the remedial investigation. The permit includes limits on emissions of target chlorinated compounds, operation, monitoring, recordkeeping, and reporting requirements.	Remove the vapor remediation system requirements. They are not necessary for compliance with air thresholds.	Addition of solvent vapor remediation system. The permit includes the addition of the sub-slab depressurization and solvent vapor extraction system with associated GAC canister control equipment to capture existing (and future) sub-slab solvent vapor contamination identified during the remedial investigation. The permit includes limits on emissions of target chlorinated compounds, operation, monitoring, recordkeeping, and reporting requirements.	No
6	Description of Permit Additions	Addition of ambient monitors for PM10, PM2.5, and VOCs. Operation of approved ambient air VOC monitors required by the Agreement are to be operated for at least two years following permit issuance to ensure t-DCE emissions remain below health risk benchmarks at all times. Conditions that must be met to discontinue VOC monitoring are also specified. In addition, the permit requires ambient monitoring for PM10 and PM2.5 to demonstrate compliance with applicable NAAQS for at least three years following permit issuance, including conditions in which the facility may discontinue PM10 and PM2.5 monitoring. The facility is responsible for managing each monitor's operation, maintenance, recordkeeping, and reporting of results as described later in this permit.	Remove ambient monitor requirements. They are unnecessary for both VOCs and PM given the compliant modeling. MPCA had already agreed to forego the PM monitors.	Addition of ambient monitors for VOCs with speciation for t-DCE and other VOCs. Operation of approved ambient air VOC monitors required by the Agreement are to be operated for at least two years following permit issuance to ensure t-DCE emissions remain below health risk benchmarks at all times. Conditions that must be met to discontinue VOC monitoring are also specified. The facility is responsible for managing each monitor's operation, maintenance, recordkeeping, and reporting of results as described later in this permit.	No
6	Description of Permit Additions	The permit requires a minimum negative pressure differential be maintained and continuous monitoring of coating room pressure and alarms (audible and visual) that alert when coating room pressure is above the set point established by 40 CFR pt. 63, subp. MMMM. The permit also requires daily inspection of enclosure integrity, annual testing of the enclosure to ensure it meets the definition described above following EPA Method 204 in Appendix M of 40 CFR Part 51, and maintenance of coating room floor sealant to avoid further sub-slab contamination due to vapor intrusion or spills.	The facility is not subject to 40 CFR 63 subp. MMMM and should not be required to meet the standards of that NESHAP. Annual testing of the total enclosure should be replaced with testing every 5 years.	The permit also requires daily inspection of enclosure integrity, annual testing of the enclosure to ensure it meets the definition described above following EPA Method 204 in Appendix M of 40 CFR Part 51, and maintenance of coating room floor sealant to avoid further sub-slab contamination due to vapor intrusion or spills.	No
8	Summary of subject items	COMG 5	Remove EQUIs 85, 89, 92, 97, and 117 as these are water-based dip/drip coaters.	EQUI 117 (South building) was removed from the list, but the others remain	No
25	5.1.37	Updated AERA Triggers (AERA Required): Any changes that affect 1,2-(trans-) Dichloroethylene, lead, and other air toxics parameter or emission rate listed in Appendix C, or an addition to the information documented in Appendix C, trigger the Updated AERA Submittal requirement. This includes changes that do not require a permit amendment as well as changes that require any type of permit amendment. Changes made under the Administrative amendment process are excluded from this requirement	Updated AERA is not required under MN rules. Evaluation of potential adverse health impacts can be accomplished with RASS resubmittal or would not be necessary based on previously established compliance margin.	5.1.38: Updated AERA Triggers (AERA Required): Any changes that affect 1,2-(trans-) Dichloroethylene, lead, and other air toxics parameter or emission rate listed in Appendix C, or an addition to the information documented in Appendix C, or the health benchmarks for any of the evaluated chemical of concern have changed to more strict values, or there are new health benchmark values for chemicals of concern used at the facility, trigger the Updated AERA Submittal requirement. This includes changes that do not require a permit amendment as well as changes that require any type of permit amendment. The updated AERA results must demonstrate compliance with the health benchmarks for the modeled pollutants. The schedule for the revised AERA submittal is defined elsewhere in this permit. Changes made under the Administrative amendment process are excluded from this requirement.	No

26	5.1.45	Prior to conducting the AERA analysis, the Permittee shall use the current version of the MPCA Air Dispersion Modeling Guidance to determine if the Baseline AERA (the most recent AERA demonstration) is outdated .	This is a vague requirement. What constitutes "outdated"?	"outdated" language remains	No
27	unnumbered	The Permittee shall conduct VOC and TO-15 Ambient Air Monitoring due before Permit Issuance Date. Ambient air monitoring shall be conducted in accordance with the MPCA-approved VOC ambient air monitoring plan in the Administrative Order dated January 17, 2020<> and included in this permit as Appendix F . F. This monitoring plan shall continue until the time the MPCA approves a revised ambient monitoring plan protocol. The permittee shall compile 24 hour VOC and TO-15 monitoring results by the last day of each month for the previous monitoring month. The results shall be reported to AQRoutineReport.PCA.state.mn.us and made available to MPCA at any other time. [Minn. R. 7007.0800, subp. 2, Minn. R. 7009.0010-7009.0090, Minn. Stat. 116.07, subds. 4a(a) & 9(2)]	Ambient monitoring should be discontinued. The facility has years of data representing operating conditions sufficient to validate the facility's tracking spreadsheet. Ambient monitoring leaves the possibility for effects from non-Water Gremlin sources and confusing results, as the monitor results vary not only with solvent usage but with meteorology and outside influences.	5.1.56: revised language. The Permittee shall conduct VOC and TO-15 Ambient Air Monitoring due within 30 days following approval of revised ambient air monitoring plan. Ambient air monitoring shall be conducted in accordance with the MPCA-approved Revised VOC ambient air monitoring plan. The VOC and TO-15 ambient monitoring may not be interrupted during the transition of ambient monitoring to the revised plan.	No
27	5.1.52	The Permittee shall compile 24 hour VOC and TO-15 monitoring results by the last day of each month for the previous monitored month. The results shall be reported to AQRoutineReport.PCA@state.mn.us as required elsewhere in the permit, and made available at any other time to MPCA upon request.	Strike this requirement: WG has 3 years of ambient VOC data monitoring already.	5.1.53, language remains. The Permittee shall continue to conduct VOC and TO-15 Ambient Air Monitoring that was required my MPCA before issuance of Permit No. 12300341-101. Ambient air monitoring shall be conducted in accordance with the MPCA-approved VOC ambient air monitoring plan in the Administrative Order dated January 17, 2020, and included in this permit as Appendix F. This monitoring plan shall continue until the time the MPCA approves a revised ambient monitoring plan. The permittee shall compile 24- hour VOC and TO-15 monitoring results by the last day of each month for the previous monitoring month. The results shall be reported to AQRoutineReport.PCA.state.mn.us and made available to MPCA at any other time.	No
27	5.1.56	Discontinuation of VOC Ambient Air Monitoring: The Permittee shall operate and maintain the VOC ambient air monitoring network according to the Ambient Air Monitoring Plan until the Commissioner determines that the following criteria have been met: 1) Two years of ambient air monitoring is conducted pursuant to the Ambient Air Monitoring Plan approved by MPCA and implemented as prescribed elsewhere in this permit; 2) There are no violations of the permit or operations shut down within the two year monitoring period; 3) The facility's 1,2-(trans-) Dichloroethylene emissions are at least 80 percent of the permitted limit during the ambient air monitoring period; 4) The probability of future long-term average 1,2-(trans-) Dichloroethylene concentrations being above health guidelines is less than 5 percent. The Permittee shall test this requirement by calculating a 95 percent upper confidence limit for the mean concentration at each monitoring site and compare the highest 95 percent upper confidence limit to 80 percent of the health benchmark for 1,2-(trans-)Dichloroethylene, as adapted from EPA Ambient Air Monitoring Network Assessment Guidance (Section 4.1). If the calculated 95 percent upper confidence limit is below 80 percent of the inhalation health benchmark for 1,2-(trans-) Dichloroethylene, ambient air monitoring may be discontinued if all other criteria are met; and 5) The permit remains in place with emission limits that result in modeled concentrations below inhalation health benchmarks. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]	These requirements are senseless. WG should not be required to use higher levels of T-DCE. Existing usage data shows the conditions are already being met (coating usage and ambient data). Also, the derivation of the TDCE RAA is suspect, the RAA is not a promulgated standard, and even if 20ug/m3 was the correct chronic threshold, the subchronic threshold of 200ug/m3 would be the applicable standard for this permit term. Water Gremlin has already provided 3 years of ambient air data. The requirement not to have violations of the permit is vague and unworkable. What constitutes a violation of the permit? Any deviation? It is counter-intuitive to require a high level of emissions, especially when the facility has a long-term plan to increase UV coating and reduce solvent usage. The health benchmark of 20 ug/m3 was improperly derived and applied to a shorter-than-chronic exposure duration.	5.1.57: Discontinuation of VOC Ambient Air Monitoring: The Permittee shall operate and maintain the VOC ambient air monitoring network according to the MPCA approved Ambient Air Monitoring Plan until the Commissioner determines that the following criteria have been met: 1) Twenty four months of ambient air monitoring is conducted pursuant to the Ambient Air Monitoring Plan approved by MPCA and implemented as prescribed elsewhere in this permit; 2) The twenty four months of ambient monitoring shall exclude periods when Water Gremlins shuts down t-DCE coating operations so that the length of the ambient monitoring period represents 24 months of measured ambient concentrations during actual coating operation with t-DCE containing materials. 3) There are no violations of the 1,2-(trans-) Dichloroethylene emission limit during the 24 months of actual coating operation; 4) The facility's 1,2-(trans-) Dichloroethylene emissions are at least 80 percent of the permitted limit during the ambient air monitoring period; 5) The probability of future long-term average 1,2-(trans-) Dichloroethylene concentrations being above health guidelines is less than 5 percent. The Permittee shall test this requirement by calculating a 95 percent upper confidence limit for the mean concentration at each monitoring site and compare the highest 95 percent upper confidence limit to 80 percent of the health benchmark for 1,2-(trans-) Dichloroethylene, as adapted from EPA Ambient Air Monitoring Network Assessment Guidance (Section 4.1). If the calculated 95 percent upper confidence limit is below 80 percent of the inhalation health benchmark for 1,2-(trans-) Dichloroethylene, ambient air monitoring may be discontinued if all other criteria are met; and 6) The permit contains limits that restrict t-DCE/VOC emissions, based on modeled concentrations below inhalation health benchmarks as approved by MPCA.	No
28	5.1.58	Within 30 days after Permit Issuance, the Permittee shall use fencing, control access points, restriction signage, and remote monitoring as specified in Appendix H to maintain control over the fence line.	30 days is not enough time. Suggest 270 days as weather issues may delay construction, or the time needed to complete based on contractor schedules, material supplies, or other delays outside of Water Gremlin's control.	5.1.58: within 180 days	No
29	5.1.60	Within three calendar days of each observed breach…	Within three **working** days of each observed breach…	5.1.60: within three facility operating days	Yes
29	5.1.61	The Permittee shall inspect the fence line once per quarter…	…shall inspect the fence line **annually**	5.1.61: once per quarter	NO
29	5.2.1	COMG 1 VOC limit	Should be on the TFAC (total facility) level, not COMG1	5.2.1: same	NO
30	5.2.2	The Permittee shall limit emissions of 1,2-(trans-) Dichloroethylene <=32.6 tons per year.	The RASS shows the appropriate value on the TFAC level should be 49 tons per year even assuming a health benchmark of 20 ug/m3.	5.2.2: The Permittee shall limit emissions of 1,2-(trans-) Dichloroethylene <= 32.6 tons per year 365-day rolling sum to be calculated each operating day…	NO
30	5.2.2	The 1,2-(trans-) Dichloroethylene emissions released outside the coating rooms must also be included as described elsewhere in this permit.	If the limit in 5.2.2 is meant to include non-coating activities, it should be on the TFAC level, not the COMG 1 level. The RASS shows the appropriate facility-wide TDCE limit, assuming a health benchmark of 20 ug/m3, is 50.8 tpy.	5.2.2: The 1,2-(trans-) Dichloroethylene emissions released outside the coating rooms must also be included as described elsewhere in this permit	No
31	5.2.4	On each day of operation, the Permittee shall calculate, record, and maintain a record of the total weight of each VOC-containing material used in coating operations and any other VOC-containing material used at the facility.	Strike "and any other VOC containing material used at the facility" as the recordkeeping associated with cleaning products, hand sanitizer, etc. is overly burdensome.	5.2.4: Daily Recordkeeping. On each day of operation, the Permittee shall calculate, record, and maintain a record of the total weight of each VOC-containing material used in coating operations.	Yes

31	5.2.6(7) and (8)	7) Total weight of fugitive 1,2-(trans-) Dichloroethylene emissions based on measured indoor air concentrations in non-coating rooms using the concentrations and procedures in Appendix B, in tons; 8) Total weight of breakthrough emissions of 1,2-(trans-) Dichloroethylene from STRU 41 (remediation stack) as required elsewhere in this permit, in tons;	Strike this language. Fugitive emissions have been evaluated and modeled with a safety factor that eliminates the need for daily recordkeeping or ongoing sampling. 5.2.10 (the default uncaptured emission rate) also eliminates the need for this calculation and recordkeeping.	Fugitives included (7), breakthrough emissions not included	No
32	5.2.7	VOC Monthly Calculations methodology	Included in daily reporting requirements and is redundant. This requriement also conflicts with the Adminsitrative Order issued to Water Gremlin.	5.2.7: Volatile Organic Compounds: Monthly Calculations	No
33	5.2.9	Daily Reporting: The Permittee shall continue to comply with the requirements of all effective enforcement documents until those documents are terminated by MPCA. As of issuance of Permit No. 12300341-101, these enforcement documents include the Stipulation Agreement executed March 1, 2019 and the Administrative Order signed January 17, 2019. These documents are included for reference as Attachments 5 and 6 to the TSD of this permit, respectively. [Minn. R. 7007.0800, subp. 2(A) & (B)]	Daily Reporting: The 2019 Stipulation agreement and 2020 Administrative Oder should be terminated upon permit issuance.	5.2.9: Daily Reporting: The Permittee shall continue to comply with the requirements of all effective enforcement documents until those documents are terminated by MPCA. As of issuance of Permit No. 12300341-101, these enforcement documents include the Stipulation Agreement executed March 1, 2019, and the Administrative Order signed January 17, 2020. These documents are included for reference as Attachments 5 and 6 to the TSD of this permit, respectively.	No
33	5.2.12	1,2-(trans-) Dichloroethylene: Reconciliation of Predicted Stack Concentration and CEMS Readings. By 4:30pm each coating operating day, the Permittee shall calculate and record the predicted stack concentration of 1,2-(trans-) Dichloroethylene versus 1,2-(trans-) Dichloroethylene usage the following equation:	The stack CEMS does not measure T-DCE concentration. It measures total hydrocarbons and reports the results as THC as T-DCE. Two should not be conflated.	5.2.12: 1,2-(trans-) Dichloroethylene: Reconciliation of Predicted Stack Concentration and CEMS (EQUI 176) Readings. By 4:30pm each coating operating day, the Permittee shall calculate and record the predicted stack concentration of 1,2-(trans-) Dichloroethylene versus 1,2-(trans-) Dichloroethylene usage the following equation: y = 0.1295x + 49.163	No
33	5.2.13	Reconciliation of Predicted Stack Concentration and CEMS Readings Audit: If the daily CEMS reading exceeds the predicted 1,2-(trans-) Dichloroethylene stack concentration for that day, in ppmv-wet, the Permittee shall immediately audit the 1,2-(trans-) Dichloroethylene-containing material usage and inventory records to determine the cause of this discrepancy and shall report this as a deviation. The Permittee shall keep records of each calculation and whether a deviation was observed. [Minn. R. 7007.0800, subps. 4-6]	This is unworkable. Our review shows that the CEMS data measuring THC cannot be predicted by T-DCE usage. This is why the CEMS is unnecessary and it doesn't produce usable data. The daily tracking spreadsheet, the monthly inventory audit and the usage limits are sufficient verification that WG is not endangering human health and the environment.	5.2.13: Reconciliation of Predicted Stack Concentration and CEMS Readings Audit: If the daily CEMS (EQUI 176) reading exceeds the predicted 1,2-(trans-) Dichloroethylene stack concentration for that day, in ppmv-wet, the Permittee shall immediately audit the 1,2- (trans-) Dichloroethylene-containing material usage and inventory records to determine the cause of this discrepancy and shall report this as a deviation. The Permittee shall implement needed corrections based on this review. The Permittee shall keep records of each calculation, whether a deviation was observed, and whether a correction was made and how the correction was made.	No
40	5.3.8	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 201A and 202 to measure the emission factor as required elsewhere in this permit.	As elsewhere in the permit, Water Gremlin suggests "using US EPA reference method 5 or 201A and method 202" anywhere that Method 201A is specified due to duct sizes at the facility. This comment applies to all instances of "method 201A" for PM10 and PM2.5 testing in the permit.	5.3.11: "shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used."	Yes, if applied globally.
45	5.5.9	Daily Inspection: On each day of operation, the Permittee shall inspect the floor of each coating room to check for degradation of the Retro-Coat Vapor Intrusion Coating System and do the following (where applicable): 1) If degradation is discovered, the Permittee shall immediately resolve the degradation. 2) If the degradation is not resolved within 24 hours, the Permittee shall immediately cease VOC- coating operations in that coating room until the degradation is corrected. 3) Notify the MPCA immediately upon ceasing VOC coating operations due to degradation on the Retro-Coat Vapor Intrusion System. 4) Photographs of all degradation areas shall be taken before and after corrective actions are taken. Photographs shall be retained in Facility records. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. Stat. 116.385, subd. 3]	Permit requirements for coating floor inspections should be consistent with negotiated practices	5.5.9: Daily Inspection: On each day of operation, the Permittee shall inspect the floor of each coating room where t-DCE VOC coaters operate to check for degradation of the Retro-Coat Vapor Intrusion Coating System and do the following (where applicable): 1) If degradation is discovered, the Permittee shall immediately resolve the degradation. 2) If the degradation is not resolved within 24 hours, the Permittee shall immediately cease VOC coating operations in that coating room until the degradation is corrected. 3) Notify the MPCA immediately upon ceasing VOC coating operations due to degradation on the Retro-Coat Vapor Intrusion System. 4) Photographs of all degradation areas shall be taken before and after corrective actions are taken. Photographs shall be retained in Facility records.	No
46	COMG 9 (5.9.1-5.9.17)		Strike this section - the compliant modeling demonstrated that operational and emission limits from the SSDS are not necessary for protecting human health or the environment. The stack (STRU41) has been quantitatively assessed without carbon control.	COMG 9 still includes required carbon for the mitigation system	No
50	5.10.1	The Permittee shall limit total maximum Heat Input <= 10.68 million British thermal units	The Permittee shall limit total maximum Heat Input <= 10.69 million British thermal units	5.10.5: limit total max heat input to 10.69 MMBTU/hr	Yes
50	5.10.2	The Permittee shall limit total maximum Heat Input <= 2.18 million British thermal units	The Permittee shall limit total maximum Heat Input <= 2.29 million British thermal units	5.15.1: limit total max heat input <=2.29 MMBTU/hr	Yes
70	5.39.3-5.39.7	Daily calculation method	Strike these sections. The throughput limit and recordkeeping data are sufficient to show compliance with the relevant PM and lead standards and the compliant modeling scenario. Daily emissions calculations are unnecessary and redundant. This comment applies to all die casting units.	5.41.5-5.41.7 - Daily calculation equations remain.	No
165	5.77.1-5.77.10	CEMS requirements	Strike this language. A CEMS for STRU73 is neither necessary (given the recordkeeping and inventory requirements) nor useful (since results present total hydrocarbons as TDCE but do not directly measure TDCE).	5.80.1-5.80.10 remain	No
221	5.113.4-5.113.6	Data collection, daily monitoring, and monitoring equipment	These requirements are unnecessary and not consistent with the smog hog's operations. This comment applies to all smog hogs.	5.134.4-5.134.6: data collection, daily monitoring, monitoring equipment	No
248	5.137.6	Daily Inspections: Once each operating day, the Permittee shall visually inspect the condition of each Stage 1, Stage 2, and HEPA filter with respect to alignment, saturation, tears, holes and any other condition that may affect the filter's performance. The Permittee shall maintain a daily written record of filter inspections. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]	This is unnecessary. The gauge inspections should be sufficient. The Nederman are not built for frequent physical inspections. Opening the doors will impact capture efficiency. This comment applies to all Nedermans paired with smog hogs. See attached letter from supplier.	5.156.6: Daily inspections: verify if the pressure drop reading is such that filter maintenance is required as per the manufacturer's specifications.	Yes

270	6.5.1	Performance test for total enclosure	Redundant to conduct frequent testing as the negative pressure alarms from 6.5.2 are sufficient.	6.3.2: The Permittee shall conduct a performance test due within 30 days of permit issuance and every 12 months thereafter to determine if each coating room in COMG 5 is a permanent total enclosure that meets the criteria of Method 204 of appendix M to 40 CFR Pt. 51.	No
271	6.5.2	The Permittee shall conduct a performance test due within 30 days of permit issuance and every 12 months thereafter to determine if each coating room in COMG 5 is a permanent total enclosure that meets the criteria of Method 204 of appendix M to 40 CFR pt. 51.	every 5 years thereafter	See above	No
273	6.9.1	Particulate Matter: The Permittee shall conduct a performance test due before 180 days following issuance of Permit No. 12300341-101 and at a minimum every 60 months thereafter to verify the emission factor described in Appendix D, and determine overall control efficiency of control equipment train under COMG 11.	Not necessary to test each and every smog hog stack	SH 15, SH 1, SH2, SH3, STRU73 due 180 days after issuance. SH5, SH 6, SH8, STRU 57 due 12 months after issuance. SH 9, SH 10, SH 11 due 24 months after issuance. SH12, SH16, SH17, SH18 due 36 months after issuance. SH19, SH20, due 48 months after issuance.	No
272	6.7	Emergency Generator Engine requirements	The emergency generator is already installed and operating. The listed requirements are not appropriate.	6.4.1-6.4.4: notification requirements for emergency generator and notification of anticipated date for opacity observations.	No
272	6.8	VOC CEMS	Water Gremlin has requested that the VOC CEMS requirements be discontinued.	6.5.1-6.5.4 remain in the permit.	No

Exhibit 3

MINNESOTA POLLUTION CONTROL AGENCY

Preliminary Draft Permit
Air Individual Permit
Major Amendment
12300341-101

Permittee: **Okabe Holding USA, Inc**

Co-permittee name: **Water Gremlin Company**

Facility name: **Water Gremlin Company**
4400 Otter Lake Road
White Bear Township, MN 55110-3757
Ramsey County

Operating permit issuance date: July 20, 2000

Expiration date: [Five years from issue date]
* All Title I Conditions do not expire

Major Amendment: [TBD]

Permit characteristics: State; Limits to avoid Part 70/ Limits to avoid NSR; Limits to avoid NSR

The emission units, control equipment and emission stacks at the stationary source authorized in this permit amendment are as described in the submittals listed in the Permit Applications Table.

This permit amendment supersedes and replaces Air Emission Permit No. 12300341-004 and authorizes the Permittee to modify and operate the stationary source at the address listed above unless otherwise noted in the permit. Except as amended herein, ~~T~~the Permittee must comply with all the conditions of the permit, Air Emission Permit No. 12300341-101. At the time of permit issuance, the following agreements and orders are enforceable until the Minnesota Pollution Control Agency terminates these:

- March 1, 2019, Stipulation Agreement; and
- January 17, 2020, Administrative Order.

Any changes or modifications to the stationary source must be performed in compliance with Minn. R. 7007.1150 to 7007.1500. Terms used in the permit are as defined in the state air pollution control rules unless the term is explicitly defined in the permit.

Unless otherwise indicated, all the Minnesota rules cited as the origin of the permit terms are incorporated into the SIP under 40 CFR § 52.1220 and as such are enforceable by U.S. Environmental Protection Agency (EPA) Administrator or citizens under the Clean Air Act.

for Steven S. Pak, P.E., Manager
Air Quality Permits Section
Industrial Division

for the Minnesota Pollution Control Agency

Commented [A1]: All of the regulated party requirements set forth in the Stipulations agreement and AO have been completed, per the negotiated agreement with the State (AG's office) and Water Gremlin. As discussed with MPCA, the permit includes the terms and conditions agreed to by the parties and there is no basis for reference to the AO and Stipulation Agreement, which must be terminated.

1. Permit applications table

Permit applications:

Title description	Application receipt date	Action number
Administrative Amendment	06/30/2016	12300341-101
Major Amendment	10/23/2018	
Major Amendment	02/08/2019 (supplemental information received 8/30/2019, 2/21/2020, 4/21/2020, 11/19/2021, 12/6/2021, 1/10/2022 and final application dated 07/01/2022)	

2. Where to send submittals

Send submittals that are required to be submitted to the EPA regional office to:

Chief Air Enforcement
Air and Radiation Branch
EPA Region V
77 West Jackson Boulevard
Chicago, Illinois 60604

Each submittal must be postmarked or received by the date specified in the applicable Table. Those submittals required by Minn. R. 7007.0100 to 7007.1850 must be certified by a responsible official, defined in Minn. R. 7007.0100, subp. 21. Other submittals shall be certified as appropriate if certification is required by an applicable rule or permit condition.

Send submittals that are required by the Acid Rain Program to:

U.S. Environmental Protection Agency
Clean Air Markets Division
1200 Pennsylvania Avenue NW (6204N)
Washington, D.C. 20460

Send any application for a permit or permit amendment to:

Fiscal Services – 6th Floor
Minnesota Pollution Control Agency
520 Lafayette Road North
St. Paul, Minnesota 55155-4194

Also, where required by an applicable rule or permit condition, send to the Permit Document Coordinator notices of:

a. Accumulated insignificant activities
b. Installation of control equipment
c. Replacement of an emissions unit, and
d. Changes that contravene a permit term

Unless another person is identified in the applicable Table, send all other submittals to:

AQ Compliance Tracking Coordinator
Industrial Division
Minnesota Pollution Control Agency
520 Lafayette Road North
St. Paul, Minnesota 55155-4194

Or

Email a signed and scanned PDF copy to:
submitstacktest.pca@state.mn.us
(for submittals related to stack testing)
AQRoutineReport.PCA@state.mn.us
(for other compliance submittals)
(See complete email instructions in "Routine Air Report Instructions Letter" at http://www.pca.state.mn.us/nwqh472.)

3. Facility description

The Water Gremlin Co (Facility) is located at 4400 Otter Lake Road, White Bear Township, Ramsey County, Minnesota.

The facility manufactures lead metal products fabricated using refined material purchased from recycling facilities. The facility produces battery terminal posts which are a major and critical component for use in automotive, marine and other consumer, commercial, governmental, and military vehicles and equipment. Other fabricated products include lead and tin sinker weights for recreational fishing applications, and lead components for governmental, commercial, recreational and personal munitions. Following fabrication, some battery terminal posts are treated with a coating to protect the products from corrosion or to improve fit with other components. The air emission units at the facility include battery terminal post coating units (coaters), die casting units, lead and tin melt pots, coining units, abrasive blasting units, makeup air units, space heaters, and an emergency generator. The ~~major pollutants of concern~~facility's air emissions include ~~volatile organic compounds (VOC),~~ trans-1,2-dichloroethylene (t-DCE), lead, particulate matter (PM), particulate matter with aerodynamic diameter less than 10 micrometers (PM_{10}), particulate matter with aerodynamic diameter less than 2.5 micrometers ($PM_{2.5}$), and nitrogen oxides (NO_x). ~~Other pollutants emitted from~~ The facility's ~~processes~~ emissions also include lesser amounts of sulfur dioxide (SO_2), volatile organic compounds (VOCs), carbon monoxide (CO), and hazardous air pollutants (HAPs) associated with fossil fuel combustion from the compression ignition emergency generator, makeup air units, lead and tin melt pots, and space heaters.

Pollution control equipment operated at the facility includes eighteen Nederman mist eliminators, ~~/~~HEPA filters and low-efficiency electrostatic precipitators (ESP), connected in-series, which capture lead and PM/PM_{10}/$PM_{2.5}$ emissions from lead and tin processing units. HEPA filters are used on select coaters to control PM/PM_{10}/$PM_{2.5}$ emissions from spray coating, and abrasive blasting units. The facility also operates a sub-slab depressurization system (SSDS) and soil vapor extraction (SVE) system with two granular activated carbon (GAC) canisters to collect and control VOC and HAP emissions from beneath the facility's concrete floor.

Description of permit additions

The permit acknowledges that at the time of permit issuance, there are other enforceable documents regulating air emissions from the facility and that these enforceable documents are not terminated with the issuance of Permit No. 12300341-101. The other enforceable documents are the Stipulation Agreement (Agreement) executed March 1, 2019, and Administrative Order (Order), signed January 17, 2020.

Commented [A2]: Terminate the Agreement and Order and delete this paragraph. The air permit contains the pertinent requirements.

Addition of emission units previously identified as insignificant activities. Several emission units at the facility were previously identified as insignificant activities under Minn. R. 7007.1300, subp. 3(F) (formerly Minn. R. 7007.1300, subp 3(I)), including die casting units, natural gas-fired heating equipment, distillation equipment, and cooling towers. As a result of current Title V modeling, the facility accepted emission limits to demonstrate compliance with applicable National Ambient Air Quality Standards (NAAQS). Since these units were modeled explicitly, they have been added to the subject item inventory as emission units.

Addition of limits on t-DCE, PM_{10}, $PM_{2.5}$, NO_2, and lead emissions. The technical review of the permit applications required an air emissions risk analysis (AERA) and dispersion model to determine the health risks of t-DCE and lead emissions from the facility. Through the permitting process, the facility was required to conduct Title V modeling to determine modeled compliance with applicable PM_{10}, $PM_{2.5}$, NO_2, and lead NAAQS. The results of these analyses required emissions and operation limits such that the facility remains in compliance with all applicable PM_{10}, $PM_{2.5}$, NO_2, and lead NAAQS and below the heath benchmarks for t-DCE and lead.

Addition of continuous emissions monitoring system (CEMS) in the battery terminal post coater stack. The permit includes a VOC CEMS in the battery terminal post coater stack (STRU 73). This was required temporarily by the

Agreement to monitor the occurrence of emissions from the coaters and ~~quantify~~ estimate the amount of t-DCE (as VOC) leaving the coaters to verify compliance with solvent use limits required by the Agreement. Permanent operation and maintenance of a VOC CEMS, record keeping of CEM results and CEM correlation validation is required by the permit as a supplement to the main compliance determination method of record keeping of daily material usage. Other supplemental requirements include quarterly VOC solvent inventory audits, and reporting.

Commented [A3]: Delete the CEMS requirement. CEMS for STRU73 is not necessary nor useful. See comment letter for further information.

Addition of solvent vapor remediation system. The permit includes the addition of the sub-slab depressurization and solvent vapor extraction system with associated GAC canister control equipment to capture existing (and future) sub-slab solvent vapor contamination identified during the remedial investigation. The permit includes limits on emissions of target chlorinated compounds, operation, monitoring, recordkeeping, and reporting requirements.

Commented [A4]: Testing and modeling shows the GAC is unnecessary and does not belong in the air permit. The Remediation group oversees the mitigation system operation.

Addition of ambient monitors for VOCs with speciation for t-DCE and other VOCs. Operation of approved ambient air VOC monitors required by the Agreement are to be operated for at least two years following permit issuance to ensure t-DCE emissions remain below health risk benchmarks at all times. Conditions that must be met to discontinue VOC monitoring are also specified. The facility is responsible for managing each monitor's operation, maintenance, recordkeeping, and reporting of results as described later in this permit.

Commented [A5]: There is no scientific justification for ongoing ambient air monitoring. Water Gremlin has collected (and provided on a simultaneous basis) three years of ambient air data at a cost of more than $1.5MM per year (as required under the Unilateral Administrative Order). Water Gremlin has also provided the MPCA with a compliant model. There is no factual, scientific basis or legal requirement for ambient air monitoring based on the toxicity evaluation, the model and the collection of over two years of data.

Recurring testing to verify coating rooms are total enclosures. The discovery of solvent vapor intrusion into sub-slab vapor space indicates the need to enhance the permit requirements to ensure that the coating rooms are being maintained as total enclosures and there are no leaks through the floors. Therefore, in order to ensure all VOC solvent vapors from coating operations are being vented to the common stack (STRU 73), the permit requires a minimum negative pressure differential be maintained and continuous monitoring of coating room pressure and alarms (audible and visual) that alert when coating room pressure is above the set point established under the permit. The permit also requires daily inspection of enclosure integrity, ~~annual~~ testing of the enclosure every five years to ensure it meets the definition described above following EPA Method 204 in Appendix M of 40 CFR Part 51, and maintenance of coating room floor sealant to avoid further sub-slab contamination due to vapor intrusion or spills.

Commented [A6]: The facility is not subject to 40 CFR 63 subp. MMMM and should not be required to meet the standards of that NESHAP. Annual testing of the total enclosure should be replaced with testing every 5 years.

Solvent authorized for use in coating operations. Permit No. 12300341-003 authorized the use of trichloroethylene (TCE), a VOC and HAP, as an allowable solvent in coating operations. Water Gremlin has eliminated the use of TCE ~~in~~ at the facility and is using t-DCE as the TCE replacement. This permit prohibits the use of TCE in any facility operations, and changes the allowable VOC-based coating solvent formula to less than or equal to 90 percent by weight VOC. All of the VOC is conservatively assumed to be t-DCE, and the balance of the material is comprised of greater than or equal to 10 percent by weight of non-HAP, non-VOC (inert) constituents. Changes to any solvent formulation that increases the amount of regulated ~~pollutants or air toxics for which there are health benchmarks~~VOCs emitted from the coating operations, or adds new ~~regulated pollutants~~VOCs in the coating operations, may require a major amendment described under Minn. R. 7007.1500.

Incorporation of minor amendment authorizing operation of EQUI 82 and authorization to install EQUI 219, EQUI 220, and additional UV coaters. Air Quality Permit No. 12300341-004 authorized construction and operation of a battery terminal post coater (EQUI 82) utilizing a non-t-DCE, very low VOC, UV-cured coating technology. Since the refined dispersion model was in-progress at the time, this~~e~~ permit amendment limited PM/PM_{10}/$PM_{2.5}$ emissions to less than or equal to each pollutant's significant impact level (SIL) established by MPCA dispersion modeling guidance in order to ensure protection of air quality. The minor amendment has been incorporated into this permit and is subject to the PM10 and PM2.5 limits at STRU 73 established by the refined dispersion model. In spite of the effective increase in allowable emissions from EQUI 82 compared to what was authorized by the minor amendment, the refined model demonstrates compliance with applicable PM_{10} and $PM_{2.5}$ NAAQS. The refined model includes revised emission limits for EQUI 82 as well as allowable emissions for future UV coaters.

Authorization to convert VOC coaters to UV or water-based coating, and conversion to other application methods. Existing VOC coaters were converted to use a water-based coating or UV coating application to further reduce VOC emissions. These were added to the permit and their emissions regulated for VOC, PM_{10}, and $PM_{2.5}$. UV and water-

based coaters that use spray application methods must be operated in coating rooms functioning as total enclosures. The permit allows for the conversion of VOC coaters to use water-based coating or UV coater application, and conversion of water-based coaters to UV coaters, or vice versa. The permit allows conversion of dip/drip water-based coaters to water-based spray application methods, and vice versa. The permit prohibits the conversion of water-based or UV coaters to VOC coaters, the addition of more VOC coaters, or the increase in capacity of existing VOC coaters without a major amendment.

Description of permit modifications
Modification of VOC emissions calculation procedure and addition of t-DCE emissions calculation procedure. The current permit authorizes calculation of VOC emissions using solvent purchase and inventory records. Due to concerns around the recordkeeping and compliance verification frequency of the current method, and to increase the accuracy of emissions accounting, the permit requires daily recordkeeping of several parameters related to solvent use, including VOC coating, water-based coating, and UV coating usage, VOC solvent recovered from the distiller, VOC waste, and calculating the VOC 12-month rolling sum and t-DCE 365-day rolling sum, in addition to VOC solvent purchase and inventory records. Uncaptured VOC/ t-DCE emissions outside the coating rooms will be included in daily calculations based on measured indoor air concentrations as described later in this permit.

Description of permit deletions
Dismantlement and removal of Fluidized Bed Solvent Recovery (carbon adsorption) unit. The facility had a carbon adsorption unit, originally installed in 2002, to control and recover TCE emissions from coating operations, which were then reconditioned and reused in the coating process. A larger carbon adsorption unit was installed in December 2018 to solve efficiency issues identified in the Environmental Audit. ~~As a result of enforcement of the Agreement, TCE use was banned from the facility and~~ Since no TCE is used at the facility, an attempt was made to retrofit the new carbon adsorption unit to recover t-DCE. The initial performance test revealed a control efficiency far less than warranted by the manufacturer due to the unit being originally designed for TCE recovery. After numerous attempts to obtain a consistent control efficiency greater than or equal to 70 percent as proposed in the application, the facility abandoned the adsorption unit as a feasible control device in its operations; therefore, the carbon adsorption unit has been removed from the permit. The facility will demonstrate compliance with VOC and t-DCE emission limits on coating operation through limiting solvent usage in coating operations.

Removal of VOC and HAP emission limit precap. Permit No. 12300341-003 allows for installation and operation of additional VOC battery terminal post coaters without prior authorization from the MPCA. This permit condition has been removed and the addition of new VOC battery post coaters or the replacement of existing VOC coaters with larger capacity VOC coaters will not be authorized by this permit. The permit pre-authorizes addition of water-based (very low VOC content) and UV-cured coating units.

Commented [A7]: Water Gremlin is unfamiliar with the concerns cited and the party who raised them.

Commented [A8]: The uncaptured VOC/t-DCE emissions outside the coating room are insignificant, especially in light of the applicable EPA PPRTV threshold. Remove this requirement throughout the permit.

Commented [A9]: As acknowledged here, usage limits and tracking are sufficient to demonstrate compliance. Modeling at the usage limits verifies ambient air concentrations are below health benchmarks. Monitoring is not necessary.

5. Limits and other requirements

Requirement number	Requirement and citation
TFAC 1	**Water Gremlin Co**
5.1.1	Permit Appendices: This permit contains appendices as listed in the permit Table of Contents. The Permittee shall comply with all applicable requirements contained in the following appendices or any finalized alternative plans and procedures allowed under the Permit or MPCA rules and regulations. If there is a conflict between the permit and the appendices, the Permit terms shall apply: Appendix A: Insignificant Activities and General Requirements; Appendix B: Maximum Material Content, Emissions Calculations Assumptions, and Analytical Methods for VOC, Water-Based, and Ultraviolet-Cured (UV) Coating Appendix C: NAAQS and AERA Modeling Parameters; Appendix D: Emission Factors for Lead Processing Units; Appendix E: Performance Test Recordkeeping; Appendix F: VOC Ambient Air Monitoring Plan; Appendix G: General Public Preclusion Plan; Appendix H: Minimum requirements for a revised VOC and TO-15 ambient monitoring; and Appendix I: Equipment Inventory at the time of permit issuance; Appendix J: 40 CFR pt. 60, subp. IIII - Standards of Performance for Stationary Compression Ignition Internal Combustion Engines; and Appendix K: 40 CFR pt. 60, subp. A - General Provisions. [Minn. R. 7007.0800, subp. 2(A) & (B)]
5.1.2	The Permittee must comply with Minn. Stat. 116.385. The Permittee may not use trichloroethylene (TCE) at its permitted facility including in any manufacturing, processing, or cleaning processes, except as described in Minn. Stat. 116.385, subd. 2(b) and 4. The permittee used TCE before the issuance of permit No, 12300341-101 and has replaced TCE; any chemical replacing TCE must be less toxic to human health and reviewed in a form determined and approved by the Commissioner of the Pollution Control Agency. This is a state-only requirement and is not enforceable by the U.S. Environmental Protection Agency (EPA) Administrator and citizens under the Clean Air Act. [Minn. R. 7007.0100, subp. 7(X), Minn. Stat. 116.385]
5.1.3	This permit establishes limits on the facility to keep it a minor source under New Source Review, Part 70, and NESHAPs. The Permittee cannot make any change at the source that would require a change to a Title I Condition or a synthetic minor limit that ensures the facility avoid a major source status under New Source Review, Part 70, and NESHAPs until a major permit amendment has been issued. This includes changes that might otherwise qualify as insignificant modifications and minor or moderate amendments unless allowed under applicable laws and regulations. [Minn. R. 7007.0100, subp. 25(A), Minn. R. 7007.1500, subp. 1(C), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, Title I Condition: Avoid major source under 40 CFR 63.2, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.1.4	Equipment Labeling: The Permittee shall permanently affix a unique number to each emissions unit for tracking purposes. Each number shall correlate the unit to the appropriate Subject Item number used in this permit. The number can be affixed by placard, stencil, or other means. The number shall be maintained so that it is readable ~~and visible at all times~~ from a safe distance and/or otherwise designated on facility maps. If equipment is added, it shall be given a new unique number; numbers from replaced or removed equipment shall not be reused. [Minn. R. 7007.0800, subp. 2(A)]

5.1.5	Equipment Inventory: The facility equipment inventory at the time of permit issuance is listed in Appendix I. The Permittee shall maintain a written revision to Appendix I with a current list of all emissions units, operating monitors, and control equipment on site. The Permittee shall update the list in Appendix I to include any replaced, modified, or new equipment ~~prior to making the change~~. The list shall correlate the units to the Subject Item numbers used in this permit and shall include the data on GI-04, GI-05B, GI-05C, and GI-05F. The date of construction shall be the date the change was made for replaced, modified, or new equipment as defined under applicable laws and regulations. [Minn. R. 7007.0800, subp. 2(A)]

Requirement number	Requirement and citation
5.1.6	PERMIT SHIELD: Subject to the limitations in Minn. R. 7007.1800, compliance with the conditions of this permit shall be deemed compliance with the specific provision of the applicable requirement identified in the permit as the basis of each condition. Subject to the limitations of Minn. R. 7007.1800 and 7017.0100, subp. 2, notwithstanding the conditions of this permit specifying compliance practices for applicable requirements, any person (including the Permittee) may also use other credible evidence to establish compliance or noncompliance with applicable requirements. This permit shall not alter or affect the liability of the Permittee for any violation of applicable requirements prior to or at the time of permit issuance. [Minn. R. 7007.1800(A)(2)]
5.1.7	Circumvention: Do not install or use a device or means that conceals or dilutes emissions, which would otherwise violate a federal or state air pollution control rule, without reducing the total amount of pollutant emitted. [Minn. R. 7011.0020]
5.1.8	Air Pollution Control Equipment: Operate all pollution control equipment whenever the corresponding process equipment and emission units are operated. [Minn. R. 7007.0800, subp. 16(J), Minn. R. 7007.0800, subp. 2(A) & (B)]
5.1.9	Operation and Maintenance Plan: Retain at the stationary source an operation and maintenance plan for all air pollution control equipment. At a minimum, the O & M plan shall identify all air pollution control equipment and control practices and shall include a preventative maintenance program for the equipment and practices, a description of (the minimum but not necessarily the only) corrective actions to be taken to restore the equipment and practices to proper operation to meet applicable permit conditions, a description of the employee training program for proper operation and maintenance of the control equipment and practices, and the records kept to demonstrate plan implementation. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 16(J)]
5.1.10	Operation Changes: In any shutdown, breakdown, or ~~deviation~~ malfunction the Permittee must immediately or as soon as possible considering plant and personnel safety take all practical steps to correct or modify operations to reduce the emission of any regulated air pollutant that would reasonably be expected to exceed applicable permit limits. No emissions units that have an unreasonable shutdown or breakdown frequency of ~~process or~~emission control equipment are permitted to operate until corrected. [Minn. R. 7019.1000, subp. 4]
5.1.11	Fugitive Emissions: Do not cause or permit the handling, use, transporting, or storage of any material in a manner which may allow avoidable amounts of particulate matter to become airborne. Comply with all other requirements listed in Minn. R. 7011.0150. [Minn. R. 7011.0150]
5.1.12	Noise: The Permittee shall comply with ~~the~~ applicable noise standards set forth in Minn. R. 7030.0010 to 7030.0080 at all times during the operation of any emission units. This is a state only requirement and is not enforceable by the EPA Administrator or citizens under the Clean Air Act. [Minn. R. 7030.0010- 7030.0080]
5.1.13	Inspections: The Permittee shall comply with applicable ~~the~~ inspection procedures and requirements as found in Minn. R. 7007.0800, subp. 9(A). [Minn. R. 7007.0800, subp. 9(A)]
5.1.14	The Permittee shall comply with applicable~~the~~ General Conditions listed in Minn. R. 7007.0800, subp. 16. [Minn. R. 7007.0800, subp. 16]
5.1.15	Performance Testing: Conduct all performance tests in accordance with Minn. R. ch. 7017 unless otherwise noted in this permit or allowed under applicable laws and regulations. [Minn. R. ch. 7017]
5.1.16	Performance Test Notifications and Submittals: Performance Test Notification and Plan: due 30 days before each Performance Test Performance Test Pre-test Meeting: due seven days before each Performance Test Performance Test Report: due 45 days after each Performance Test

Requirement number	Requirement and citation
	The Notification, Test Plan, and Test Report must be submitted in a format specified by the commissioner. [Minn. R. 7017.2017, Minn. R. 7017.2030, subps. 1-4, Minn. R. 7017.2035, subps. 1-2]
5.1.17	Limits set as a result of a performance test (conducted before or after permit issuance) apply until superseded as stated in the MPCA's Notice of Compliance letter granting preliminary approval. Preliminary approval is based on formal review of a subsequent performance test on the same unit as specified by Minn. R. 7017.2025, subp. 3. The limit is final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025, subp. 3]
5.1.18	Monitoring Equipment Calibration - The Permittee shall either: 1. Calibrate or replace required monitoring equipment every 12 months; or 2. Calibrate at the frequency stated in the manufacturer's specifications. For each monitor, the Permittee shall maintain a record of all calibrations, including the date conducted, and any corrective action that resulted. The Permittee shall include the calibration frequencies, procedures, and manufacturer's specifications (if applicable) in the Operations and Maintenance Plan. Any requirements applying to continuous emission monitors are listed separately in this permit. [Minn. R. 7007.0800, subp. 4(D)]
5.1.19	Operation of Monitoring Equipment: Unless noted elsewhere in this permit, monitoring a process or control equipment connected to that process is not necessary during periods when the process is shutdown, or during checks of the monitoring systems, such as calibration checks and zero and span adjustments. If monitoring records are required, they should reflect any such periods of process shutdown or checks of the monitoring system. [Minn. R. 7007.0800, subp. 4(D)]
5.1.20	Recordkeeping: Retain all records at the stationary source, unless otherwise specified within this permit, for five (5) years from the date of monitoring, sample, measurement, or report. Records which must be retained at this location include all calibration and maintenance records, all original recordings for continuous monitoring instrumentation, and copies of all reports required by the permit. Records must conform to the requirements listed in Minn. R. 7007.0800, subp. 5(A). [Minn. R. 7007.0800, subp. 5(C)]
5.1.21	Recordkeeping: Maintain records describing any insignificant modifications (as required by Minn. R. 7007.1250, subp. 3) or changes contravening permit terms (as required by Minn. R. 7007.1350, subp. 2), including records of the emissions resulting from those changes. [Minn. R. 7007.0800, subp. 5(B)]
5.1.22	If the Permittee determines that no permit amendment or notification is required prior to making a change, the Permittee must retain records of all calculations required under Minn. R. 7007.1200. For non-expiring permits, these records shall be kept for a period of five years from the date that the change was made. The records shall be kept at the stationary source for the current calendar year of operation and may be kept at the stationary source or office of the stationary source for all other years. The records may be maintained in either electronic or paper format. [Minn. R. 7007.1200, subp. 4]
5.1.23	Shutdown Notifications: Notify the commissioner at least 24 hours in advance of a planned shutdown of any control equipment or process equipment if the shutdown would cause any increase in the emissions of any regulated air pollutant that would exceed permit limits. If the Permittee does not have advance knowledge of the shutdown, the Permittee must notify the commissioner as soon as possible after the shutdown. However, notification is not required in the circumstances outlined in items A, B, and C of Minn. R. 7019.1000, subp. 3. At the time of notification, the Permittee~~owner or operator~~ must inform the commissioner of the cause of the shutdown and the estimated duration. The Permittee~~owner or operator~~ must notify the commissioner when the shutdown is over. [Minn. R. 7019.1000, subp. 3]

Requirement number	Requirement and citation
5.1.24	Breakdown Notifications: Notify the commissioner within 24 hours of a breakdown of more than one hour of any control equipment or process equipment if the breakdown causes any increase in the emissions of any regulated air pollutant. The 24-hour time period starts when the breakdown was discovered or reasonably should have been discovered by the Permittee~~owner or operator~~. However, notification is not required in the circumstances outlined in items A, B, and C of Minn. R. 7019.1000, subp. 2. At the time of notification or as soon as possible thereafter, the Permittee must inform the commissioner of the cause of the breakdown and the estimated duration. The Permittee must notify the commissioner when the breakdown is over. [Minn. R. 7019.1000, subp. 2]
5.1.25	Notification of Deviations Endangering Human Health or the Environment: Immediately after discovery of the deviation or immediately after when the deviation reasonably should have been discovered, notify the commissioner either orally or by e-mail, or telephone the state duty officer at 800-422-0798 or 651-649-5451, of any deviation from permit conditions that could endanger human health or the environment. [Minn. R. 7019.1000, subp. 1]
5.1.26	Notification of Deviations Endangering Human Health or the Environment Report: Within two working days of discovery, notify the commissioner in writing of any deviation from permit conditions that could endanger human health or the environment. Include the following information in this written description: 1. the cause of the deviation; 2. the exact dates of the period of the deviation, if the deviation has been corrected; 3. whether or not the deviation has been corrected; 4. the anticipated time by which the deviation is expected to be corrected, if not yet corrected; and 5. steps taken or planned to reduce, eliminate, and prevent reoccurrence of the deviation. [Minn. R. 7019.1000, subp. 1]
5.1.27	Relocation Notification Form: due 48 hours before change in location. Submit notification on a form approved by the Commissioner. [Minn. R. 7007.0800, subp. 12(C)]
5.1.28	Application for Permit Amendment: If a permit amendment is needed, submit an application in accordance with the requirements of Minn. R. 7007.1150 through Minn. R. 7007.1500. Submittal dates vary, depending on the type of amendment needed. Upon adoption of a new or amended federal applicable requirement, and if there are three or more years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150 - 7007.1500]
5.1.29	Extension Requests: The Permittee may apply for an Administrative Amendment to extend a deadline in a permit by no more than 120 days, provided the proposed deadline extension meets the requirements of Minn. R. 7007.1400, subp. 1(H). Performance testing deadlines from the General Provisions of 40 CFR pt. 60 and pt. 63 are examples of deadlines for which the MPCA does not have authority to grant extensions and therefore do not meet the requirements of Minn. R. 7007.1400, subp. 1(H). [Minn. R. 7007.1400, subp. 1(H)]
5.1.30	Within 15 days of a request from the Commissioner, the Permittee must provide a complete summary of all performance tests required at the facility including the subject item, pollutant, most recent test date (if applicable), and the date of the next test in an approved format. [Minn. R. 7007.0800, subp. 16(L)]
5.1.31	Emission Inventory Report: due on or before April 1 of each calendar year following permit issuance. Submit in a format specified by the Commissioner. [Minn. R. 7019.3000-7019.3100]
5.1.32	Emission Fees: due 30 days after receipt of an MPCA bill. [Minn. R. 7002.0005-7002.0085]

Requirement number	Requirement and citation
5.1.33	Modeled Parameters for PM10, PM2.5, NO2, and lead NAAQS: The parameters used in NAAQS modeling for Permit No. 12300341-101 are listed in Appendix C of this permit. The parameters describe the operation of the facility at maximum permitted capacity. The purpose of listing the parameters in the appendix is to provide a benchmark for future changes. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.34	Modeled Parameters for Air Emissions Risk Analysis (AERA): The parameters for 1,2-(trans-) Dichloroethylene and lead used in the AERA for Permit No. 12300341-101 are listed in Appendix C of this permit. The parameters describe the operation of the facility at maximum permitted capacity. The purpose of listing the parameters in the appendix is to provide a benchmark for future changes. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.35	Equivalent or Better Dispersion (EBD) Modeling Triggers (Modeling Submittal Not Required before the change): Changes that do not require a permit amendment or require an administrative permit amendment do not trigger the EBD Modeling Submittal requirement before the change can be made. The Permittee shall keep updated records on site of all modeled PM10, PM2.5, NO2, and lead parameters and emission rates listed in Appendix C. The updated EBD modeling results must demonstrate compliance with NAAQS for the modeled pollutant. The Permittee shall submit any changes to modeled parameters and emission rates with the next required modeling submittal. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.36	Updated AERA Triggers (AERA Submittal Not Required before the change): Changes that do not require a permit amendment or require an administrative permit amendment do not trigger the Updated AERA Submittal requirement before the change can be made. The Permittee shall keep updated records on site of all 1,2-(trans-) Dichloroethylene, lead, and other air toxics parameters and emission rates listed in Appendix C. The updated AERA results must demonstrate compliance with the health benchmarks for the modeled pollutants. The Permittee shall submit any changes to AERA parameters and emission rates with the next required AERA submittal. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.37	Equivalent or Better Dispersion (EBD) Modeling Triggers (Modeling Required): Any changes that affect any modeled PM10, PM2.5, NO2, and lead parameter or emission rate listed in Appendix C, or an addition to the information documented in Appendix C, trigger the EBD Remodeling Submittal requirement. This includes changes that do not require a permit amendment as well as changes that require any type of permit amendment. The updated EBD modeling results must demonstrate compliance with NAAQS for the modeled pollutant. The schedule for EBD Remodeling submittal is defined elsewhere in this permit. Changes made under the Administrative amendment process are excluded from this requirement. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.38	Updated ~~AERA~~ RASS Triggers (~~AERA~~ RASS Required): Any changes that affect 1,2-(trans-) Dichloroethylene, lead, and other air toxics parameter or emission rate listed in Appendix C, or an addition to the information documented in Appendix C, or the health benchmarks for any of the evaluated chemical of concern have changed to more strict values, or there are new health benchmark values for chemicals of concern used at the facility, trigger the Updated ~~AERA~~ RASS Submittal requirement. This includes changes that do not require a permit amendment as well as changes that require any type of permit amendment. The updated ~~AERA~~ RASS results must demonstrate compliance with the health benchmarks for the modeled pollutants. The schedule for the revised ~~AERA~~ RASS submittal is defined elsewhere in this permit. Changes made under the Administrative amendment process are excluded from this requirement. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.39	EBD Modeling Submittal at Reissuance: The Permittee shall submit an EBD Modeling Submittal with the permit reissuance application (due as stated elsewhere in this permit) that addresses any changes

Commented [A11]: Unnecessary and burdensome requirement not required by rules. Delete the EBD Modeling Triggers. If a change does not require a permit amendment, any remodeling can wait until the next permit or amendment application.

Commented [A12]: Unnecessary and burdensome requirement not required by rules. Delete the AERA Triggers. If a change does not require a permit amendment, any remodeling and risk re-evaluation can wait until the next permit or amendment application.
To the extent that any risk analysis triggers are retained, it should only involve an updated RASS, as Water Gremlin has only prepared a RASS for this permit, not an AERA.

Commented [A13]: Delete the EBD Modeling Triggers. If a change does not require a permit amendment, any remodeling can wait until the next permit or amendment application.

Requirement number	Requirement and citation
	made during the permit term that did not require a permit amendment but that affected any modeled PM10, PM2.5, NO2, and lead parameter or emission rate documented in Appendix C, or an addition to the information documented in Appendix C and that did not trigger the EBD Modeling Triggers (Modeling Required) requirement. [Minn. R. 7007.0800, A) & (B, Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.40	Updated ~~AERA~~ RASS Submittal at Reissuance: The Permittee shall submit an Updated ~~AERA~~ RASS Submittal with the permit reissuance application (due as stated elsewhere in this permit) that addresses any changes made during the permit term that did not require a permit amendment but that affected any increase above permit limits in 1,2- (trans-) Dichloroethylene, lead, and other air toxics parameter or emission rate documented in Appendix C, ~~or an addition to the information documented in Appendix C and that did not trigger the Updated AERA Triggers (AERA Required) requirement.~~ [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.41	EBD Modeling Submittal: For changes meeting the criteria in the EBD Modeling Triggers (Modeling Required) requirement, the Permittee shall submit an EBD modeling submittal in accordance with the current version of the MPCA Air Dispersion Modeling Guidance and shall wait for written approval (for major amendments, in the form of an issued permit amendment; for moderate amendments, in the form of a construction authorization letter) before making such changes. For changes that do not require a moderate or major amendment, but require a minor permit amendment, written approval of the EBD modeling may be given before permit issuance; however, this approval applies only to the EBD modeling and not to any other changes. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.42	Updated ~~AERA~~ RASS Submittal: For changes meeting the criteria in the Updated ~~AERA~~ RASS Triggers (~~AERA~~ RASS Required) requirement, the Permittee shall submit an updated ~~AERA~~ RASS submittal in accordance with the current version of the MPCA Air Dispersion Modeling Guidance and shall wait for written approval (for major amendments, in the form of an issued permit amendment; for moderate amendments, in the form of a construction authorization letter) before making such changes. For changes that do not require a moderate or major amendment, but require a minor permit amendment, written approval of the updated ~~AERA~~ RASS may be given before permit issuance; however, this approval applies only to the updated ~~AERA~~ RASS and not to any other changes. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.43	EBD Modeling Submittal Content: The information submitted must include, for stack and vent sources, source emission rate, location, height, diameters, exit velocity, exit temperature, discharge direction, use of rain caps or rain hats, and, if applicable, locations and dimensions of nearby buildings. For non-stack/vent sources, this includes the source emission rate, location, size and shape, release height, and, if applicable, any emission rate scalars, and the initial lateral dimensions and initial vertical dimensions and adjacent building heights. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.44	Updated ~~AERA~~ RASS Submittal Content: The information submitted must include, for stack and vent sources, source emission rate, location, height, diameters, exit velocity, exit temperature, discharge direction, use of rain caps or rain hats, and, if applicable, locations and dimensions of nearby buildings. For non-stack/vent sources, this includes the source emission rate, location, size and shape, release height, and, if applicable, any emission rate scalars, and the initial lateral dimensions and initial vertical dimensions and adjacent building heights. If this information is being submitted with a concurrent EBD modeling submittal, this information only needs to be listed once in the combined submittal. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.45	Outdated EBD Baseline Modeling: Prior to conducting the EBD analysis, the Permittee shall use the current version of the MPCA Air Dispersion Modeling Guidance to determine if the Baseline Modeling (the most recent refined modeling demonstration) is consistent with the current version of the MPCA Air Dispersion Modeling Guidance (not outdated). The Permittee may verify if the Baseline modeling

Commented [A14]: The cited rule does not contain a specific requirement with respect to this EBD submittal.

Commented [A15]: Delete the AERA Triggers. If a change does not require a permit amendment, any remodeling and risk re-evaluation can wait until the next permit or amendment application.
To the extent that any risk analysis updates are retained, it should only involve an updated RASS, as Water Gremlin has only prepared a RASS for this permit, not an AERA.

Commented [A16]: The term "Updated AERA" is not defined. It is unclear if this requirement is solely for an updated RASS. Water Gremlin has not prepared an AERA for the facility to date.

Commented [A17]: Delete. This is not standard practice. If a change does not require a permit amendment, any remodeling and risk re-evaluation can wait until the next permit or amendment application.

Commented [A18]: Delete. This is not standard practice. If a change does not require a permit amendment, any remodeling and risk re-evaluation can wait until the next permit or amendment application. Also, the term "Updated AERA" is not defined and is unclear from agency permit staff. Water Gremlin has only submitted RASS to date.

Commented [A19]: Delete as repetitive: modeling and AERA use the same information. MPCA does not need this information twice. No AERA prepared to date.

Commented [A20]: This is vague and ambiguous. There is no indication of what "outdated" means. The Permittee should not be subject to subjective standards and unclear triggering requirements.

Requirement number	Requirement and citation
	is consistent with current Guidance during the approval process for the modeling protocol. If the Baseline Modeling is outdated, the Permittee shall update the Baseline Modeling to be consistent with the current version of the MPCA Air Dispersion Modeling Guidance. The updated modeling will become the new Baseline Modeling. This requirement does not require the Permittee to complete a new refined modeling demonstration using the revisions made for the EBD demonstration. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.46	Outdated Baseline ~~AERA~~RASS: Prior to conducting the ~~AERA~~ RASS analysis, the Permittee shall use the current version of the MPCA Air Dispersion Modeling Guidance to determine if the Baseline ~~AERA~~ RASS (the most recent ~~AERA~~ RASS demonstration) is consistent with the current version of the MPCA Air Dispersion Modeling Guidance (not outdated). The permittee may verify if the Baseline ~~AERA~~ RASS is consistent with current Guidance during the approval process for the modeling and ~~AERA~~ RASS protocol. If the Baseline ~~AERA~~ RASS is outdated, the Permittee shall update the Baseline ~~AERA~~ RASS to be consistent with the current version of the MPCA Air Dispersion Modeling Guidance. The updated ~~AERA~~ RASS will become the new Baseline ~~AERA~~RASS. This requirement does not require the Permittee to complete a new ~~AERA~~ RASS using the revisions made for the EBD demonstration. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.47	EBD Modeling Results: The dispersion characteristics due to the revisions of the information in Appendix C must be equivalent to or better than the dispersion characteristics modeled in the most recent approved modeling submittal that shows compliance with NAAQS, unless the model still demonstrates compliance with the applicable emission limit. The Permittee shall, if necessary, demonstrate this equivalency in the proposal. The requirements in this condition do not apply if the permittee has conducted refined modeling using the revised parameters and has demonstrated modeled compliance with the applicable emission limits. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.48	Updated ~~AERA~~ RASS Results: The dispersion characteristics due to the revisions of the information in Appendix C must be equivalent to or better than the dispersion characteristics modeled in the most recent approved modeling submittal that shows modeled compliance with NAAQS and health benchmarks The Permittee shall demonstrate this equivalency in the proposal. The requirements in this condition do not apply if the permittee has conducted refined modeling using the revised parameters and has demonstrated compliance with the applicable emission limits. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.49	Computer Dispersion Modeling Triggers for PM10, PM2.5, NO2, and lead NAAQS: The Permittee shall conduct a refined remodeling analysis in accordance with the Computer Dispersion Modeling requirements of this permit and the current version of the MPCA Air Dispersion Modeling Guidance if: (1) the results of the EBD modeling analysis do not demonstrate equivalent or better dispersion characteristics; (2) a conclusion cannot readily be made about the dispersion, or (3) the criteria in the EBD Modeling Triggers requirement are met and the Permittee has previously conducted three successive EBD analyses using the same Baseline Modeling, unless written approval is obtained from MPCA to get an exception from this maximum number of allowed EBD analyses. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.50	Computer Dispersion Modeling/~~AERA~~ RASS Protocol: due 180 days after receipt of written MPCA request for PM10, PM2.5, NO2, and/or lead NAAQS, and/or ~~AERA~~ RASS refined modeling. The Permittee shall submit a Computer Dispersion Modeling/AERA Protocol that is complete and approvable by MPCA by the deadline in this requirement. This protocol will describe the proposed modeling methodology and input data, in accordance with the current version of the MPCA Air Dispersion Modeling Guidance. The protocol must be based on projected operating conditions under the next permit term. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]

Commented [A21]: This is vague and ambiguous. There is no indication of what "outdated" means. The Permittee should not be subject to subjective standards and unclear triggering requirements. Water Gremlin has only prepared a RASS, not an AERA.

Commented [A22]: This condition should provide for a scenario in which the dispersion characteristics are not equivalent or better. The term "equivalent to or better" is vague and ambiguous. It is possible for a stack or vent to have worse dispersion but for the model to still show compliance with the NAAQS/toxics thresholds.

Commented [A23]: This condition should provide for a scenario in which the dispersion characteristics are not equivalent or better. The term "equivalent to or better" is vague and ambiguous. It is possible for a stack or vent to have worse dispersion but for the model to still show compliance with the NAAQS/toxics thresholds.

Commented [A24]: Delete requirement 3. Depending on operational changes, three successive analyses does not necessarily mean full re-modeling is warranted.

Requirement number	Requirement and citation
5.1.51	Computer Dispersion Modeling/~~AERA~~ RASS Protocol: due 60 days after receipt of written MPCA request for revisions to the submitted protocol for PM10, PM2.5, NO2, and/or lead NAAQS, and/or ~~AERA~~ RASS modeling in connection with the permit application, or amendement thereto. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.52	Computer Dispersion Modeling/~~AERA~~ RASS Results: due 180 days after receipt of written MPCA approval of Computer Dispersion Modeling Protocol for PM10, PM2.5, NO2, and/or lead NAAQS, and/or ~~AERA~~RASS. The Permittee shall submit a final Computer Dispersion Modeling Report that is complete and approvable by MPCA by the deadline in this requirement. The submittal shall adhere to the current version of the MPCA Air Dispersion Modeling Guidance and the approved Computer Dispersion Modeling Protocol. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.53	~~The Permittee shall continue to conduct VOC and TO-15 Ambient Air Monitoring that was required my MPCA before issuance of Permit No. 12300341-101. Ambient air monitoring shall be conducted in accordance with the MPCA-approved VOC ambient air monitoring plan in the Administrative Order dated January 17, 2020, and included in this permit as Appendix F. This monitoring plan shall continue until the time the MPCA approves a revised ambient monitoring plan. The permittee shall compile 24-hour VOC and TO-15 monitoring results by the last day of each month for the previous monitoring month. The results shall be reported to AQRoutineReport.PCA.state.mn.us and made available to MPCA at any other time. [Minn. R. 7007.0800, subp. 2, Minn. R. 7009.0010-7009.0090, Minn.Stat. 116.07, subd. 4a(a) & 9(2)]~~
5.1.54	~~The Permittee shall submit a revised ambient monitoring plan for VOC and TO-15 Ambient Air Monitoring due within 30 days of permit issuance. The revised ambient monitoring protocol shall address the following as described in Appendix H~~ ~~1) Number and locations of monitoring sites following EPA siting requirements.~~ ~~2) Sampling frequency~~ ~~3) Data submittal frequency~~ ~~4) TO-15 analytes include 1,2 (trans) Dichloroethylene. [Minn. R. 7007.0800, subp. 2, Minn. R. 7009.0010-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]~~
5.1.55	~~The Permittee shall submit a revised Ambient Monitoring Plan: due 60 calendar days after Date of Receipt of written MPCA request for revisions to the submitted Ambient Air Monitoring Plan for VOC and TO-15. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0010-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]~~
5.1.56	~~The Permittee shall conduct VOC and TO-15 Ambient Air Monitoring due within 30 days following approval of revised ambient air monitoring plan. Ambient air monitoring shall be conducted in accordance with the MPCA-approved Revised VOC ambient air monitoring plan. The VOC and TO-15 ambient monitoring may not be interrupted during the transition of ambient monitoring to the revised plan. [Minn. R. 7007.0800, subp. 2, Minn. R. 7009.0010-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]~~
5.1.57	Discontinuation of VOC Ambient Air Monitoring: The Permittee shall operate and maintain the VOC ambient air monitoring network according to the MPCA approved Ambient Air Monitoring Plan until the Commissioner determines that the following criteria have been met: 1) Twenty four months of ambient air monitoring is conducted pursuant to the Ambient Air Monitoring Plan approved by MPCA and implemented as prescribed elsewhere in thispermit; 2) The twenty four months of ambient monitoring shall exclude periods when Water Gremlins shuts down t-DCE coating operations so that the length of the ambient monitoring period represents 24 months of measured ambient concentrations during actual coating operation with t-DCE containing materials. 3) There are no violations of the 1,2-(trans-) Dichloroethylene emission limit during the 24 months of actual coating operation; 4) The facility's 1,2-(trans-) Dichloroethylene emissions are at least 80 percent of the permitted limit or not more than 50 percent of the permitted limit for three consecutive

Commented [A25]: There is no scientific justification for ongoing ambient air monitoring. Water Gremlin has collected (and provided on a simultaneous basis) three years of ambient air data at a cost of more than $1.5MM per year (as required under the Unilateral Administrative Order). Water Gremlin has also provided the MPCA with a compliant model. There is no factual, scientific basis or legal requirement for ambient air monitoring based on the toxicity evaluation, the model and the collection of over two years of data.

The facility has years of data representing operating conditions that validate the facility's tracking spreadsheet. The MPCA is well aware that ambient monitoring is unreliable as monitor results vary not only with, material usage, but with meteorology and outside influences. The facility is meeting detailed tracking and mass-balance requirements.

Commented [A26]: Delete. See above. The risk evaluation, existing data and modeling demonstrate compliance with permit conditions, well below the applicable risk criteria.

Commented [A27]: Delete. See above. Water Gremlin has three years of ambient VOC data monitoring already.

Commented [A28]: Delete. Existing usage data shows the conditions are already being met (coating usage and ambient data).

Commented [A29]: See above. Water Gremlin believes ongoing ambient air monitoring is unnecessary, and has already provided three years of monitoring data.

Commented [A30]: It is counterintuitive and counterproductive to require a high level of usage emissions in order to discontinue monitoring, when the facility has stated its long-term plans to increase UV coating and reduce solvent coating. The trigger for discontinuing ambient monitoring should be tied to reduced VOC-based coating usage. It is illogical to encourage high usage rather than low usage as the company moves away from VOC-based coating.

	months;

Requirement number	Requirement and citation
	~~during the ambient air monitoring period;~~ ~~5) The probability of future long-term average 1,2-(trans-) Dichloroethylene concentrations being above health guidelines is less than 5 percent. The Permittee shall test this requirement by calculating a 95-percent upper confidence limit for the mean concentration at each monitoring site and compare the highest 95-percent upper confidence limit to 80 percent of the health benchmark for 1,2-(trans-) Dichloroethylene, as adapted from EPA Ambient Air Monitoring Network Assessment Guidance (Section 4.1). If the calculated 95-percent upper confidence limit is below 80 percent of the inhalation health benchmark for 1,2-(trans-) Dichloroethylene, ambient air monitoring may be discontinued if all other criteria are met; and~~ ~~6) The permit contains limits that restrict t-DCE/VOC emissions, based on modeled concentrations below inhalation health benchmarks as approved by MPCA. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]~~
5.1.58	General Public Preclusion Plan - Boundary Map Within ~~180~~ 270 days after Permit Issuance, the Permittee shall use fencing, control access points, restriction signage, and remote monitoring as specified in Appendix G to maintain control over the fence line. Appendix G to this permit is a map that depicts the boundary at which the access of the general public can be controlled and compliance with the National Ambient Air Quality Standards (NAAQS) can be demonstrated. Appendix G identifies the forms of control the Permittee will use to restrict access to the general public along portions of the fence line. The general public does not include employees or other categories of people who have been directly authorized by the property owner to enter or remain on the property for a limited period of time and for a specific purpose. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp. 4(D), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.1.59	General Public Preclusion Plan This Plan shall, at a minimum, contain the following information: 1. A map of the facility that clearly displays the ambient air boundary. The map must indicate how access is precluded for each section of the boundary and must identify all access points (including roadways, power lines, rail spurs, etc.); 2. Locations where fencing will be implemented; 3. Restriction signage spacing (restriction signage may include notices such as "No Trespassing," "Private Property," "Do Not Enter," or "Restricted Area"); 4. Location of remote monitoring devices; 5. Operation and maintenance requirements of remote monitoring software and devices; 6. Contingency plans for downtime for remote monitoring software and devices; and 7. A response plan for when breaches occur. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp. 4(D), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.1.60	Recordkeeping for Breaches of the Ambient Air Boundary Within three facility operating days of each observed breach, the Permittee shall document each instance that the ambient air boundary was breached by a member of the general public, including documenting the type, location, and duration of each breach. The Permittee shall identify and, within 30 days, implement measures to prevent future breaches, if necessary. A breach to the ambient boundary occurs when a member of the general public accesses property identified by the Permittee as non-ambient air other than by invitation, request or for other facility authorized business purposes. The observation of a breach may be direct or indirect. A direct observation includes witnessing a

Commented [A31]: As stated in Water Gremlin's cover letter on the draft permit, the MDH's health benchmark was improperly extrapolated and derived. EPA's PPRTV for TDCE is the more appropriate health benchmark to use for determining the overall facility emissions limit.

Commented [A32]: Allow 270 days for any additional public preclusion plan construction, if required.

Requirement number	Requirement and citation
	member of the general public on property identified as non-ambient air. Indirect observations rely on evidence of a breach, such as a cut fence, worn paths, motorized vehicle tracks, or other signs of disturbance by a member of the general public on property identified as non-ambient air. The Permittee shall report each breach, including all steps taken or changes made to the General Public Preclusion Plan to prevent additional breaches, in the semiannual Deviations Report required by this permit. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp. 4(D), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.1.61	General Public Preclusion Plan - Fencing: The Permittee shall install and maintain fencing along ambient air boundary as depicted in Appendix G. The Permittee shall inspect the fence line ~~once per quarter~~annually. The Permittee shall maintain records of inspection and required maintenance of fence line. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp. 4(D), Minn. R. 7007.0800, subp. 5, Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.1.62	General Public Preclusion Plan - Remote Monitoring: The Permittee shall operate and maintain remote monitoring equipment to maintain the effective fence line as depicted in Appendix G. The Permittee shall monitor at a minimum of once per day. Remote monitoring devices include but are not limited to fixed cameras and drone mounted cameras. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp. 4(D), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.1.63	General Public Preclusion Plan - Control of Access: The Permittee shall control access at any unused road, trail equal to or wider than 50 inches, and all abandoned railroad grades as private property and notice of no access to unauthorized persons. ~~The Permittee shall secure these access points with a locked and/or monitored gate or other physical barrier precluding access by the general public.~~ The permittee may submit an alternative plan for control access to replace these requirements. Upon MPCA approval, the permittee may follow the approved control access plan in lieu of the "General Public Preclusion Plan - Control of Access" requirements in this permit, The alternative plan to control access must be implemented within 180 days after MPCA approval. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subp. 4(D), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.1.64	The permittee shall comply with National Primary and Secondary Ambient Air Quality Standards, 40 CFR pt. 50, and the Minnesota Ambient Air Quality Standards, Minn. R. 7009.0010 to 7009.0090. Compliance shall be demonstrated upon written request by the MPCA. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.1.65	Commercial Disclosure Regarding Facility Emissions Into the Community: The Permittee shall conduct a meeting annually to disclose factual information to the community regarding facility operations, changes made or planned to reduce air emissions, management of hazardous materials and compliance with environmental permits and regulations. The Permittee shall provide the time, date, location, format, and agenda of the meeting to the MPCA 60 days before the meeting. [Minn. R. 7007.0800, subp. 2(B), Minn. Stat. 116.07, subd. 9(2)]
5.1.66	The responsible official that certifies the submittals required to be certified by rule and by this permit must meet the definition at Minn. R. 7007.0100, subp. 21. The Permittee must obtain approval of delegation of authority for the designated representative by the Commissioner as required by Minn. R. 7007.0100, subp. 21(A), (B) or (C). The certification statements must meet the requirements in Minn. R. 7007.0500 subp. 3. [Minn. R. 7007.0100, subp. 21, Minn. R. 7007.0800, subp. 6(A)]
COMG 1	**VOC and 1,2 (trans) Dichloroethylene Limits and VOC Coater, Water-Based Coater, UV Coater, and Solvent Distillation Operation Requirements.**
5.2.1	The Permittee shall limit emissions of Volatile Organic Compounds <= 90.0 tons per year 12-month rolling sum to be calculated each operating day for the previous 12-month period as described later in this permit. All VOC-emitting equipment in COMG 1 is subject to this limit.

Commented [A33]: Permittee has fencing and security procedures.

Commented [A34]: There is no provision under Minnesota law that requires the Permitee to conduct annual meetings, and no such requirement should be included in the permit. This comment applies to all similar requirements in the permit.

Commented [A35]: Limit should be on TFAC level, not COMG 1.

Requirement number	Requirement and citation
	VOC emissions shall be calculated based on the method described elsewhere in this permit. VOC content for each VOC-containing material shall be determined as described under the Material Content requirement in Appendix B. VOC emissions shall be calculated based on all VOC, Water Based and UV Coaters. VOC content for each VOC-containing material shall be determined as described under the Material Content requirement in Appendix B. The Permittee may take into account the VOCs from coating operations that exit the facility as waste as described under the Waste Credit for Calculation of VOC Emissions requirement in COMG 1. [Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.2.2	The Permittee shall limit emissions of 1,2-(trans-) Dichloroethylene <= 78~~XX~~2.6 tons per year 365-day rolling sum to be calculated each operating day for the previous 365-day period as described later in this permit. All 1,2-(trans-) Dichloroethylene-emitting equipment and operations at the facility is subject to this limit. 1,2-(trans-) Dichloroethylene emissions shall be calculated based on the methods described elsewhere in this permit. 1,2-(trans-) Dichloroethylene content in VOC-containing material shall be determined by assuming the entire VOC content is 1,2-(trans-) Dichloroethylene as described under the Material Content requirement in Appendix B. The 1,2-(trans-) Dichloroethylene emissions released outside the coating rooms must also be included as described elsewhere in this permit. The calculation of 1,2-(trans-) Dichloroethylene emissions may take into account the 1,2-(trans-) Dichloroethylene that exits the facility as waste as described under the Waste Credit requirement in COMG 1, but only if the Permittee separately quantifies the specific 1,2-(trans-) Dichloroethylene content in the waste material as described elsewhere in this permit. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.3	1,2-(trans-) Dichloroethylene ~~Quarterly~~ Annual Purchase Audit: Each calendar ~~quarter~~year, the Permittee shall audit purchase records and existing inventory of 1,2-(trans-) Dichloroethylene VOC-containing material, 1,2-(trans-) Dichloroethylene VOC-containing material usage records and keep records of each audit. If the estimates of use of 1,2-(trans-) Dichloroethylene VOC-containing material based on the purchase and inventory audit shows amounts of use 20 percent or greater than what was calculated based on daily usage logs described elsewhere in the permit, the Permittee shall review and correct as needed the procedures for the daily record keeping of use of 1,2-(trans-) Dichloroethylene VOC-containing material. The audit and records of corrections shall be made available for inspection upon request. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020- 7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.2.4	Daily Recordkeeping. On each day of operation, the Permittee shall calculate, record, and maintain a record of the total weight of each VOC-containing material used in coating operations. This shall be based on written usage logs. Written usage logs shall include all data and calculations used to obtain the recorded weight(s) of each VOC-containing material used. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.2.5	Volatile Organic Compounds: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate, record, and maintain a record of the following for the previous operating day: 1) total weight of each VOC coating and solvent used in COMG 1 , in tons; 2) total weight of each VOC-containing material used in COMG 1 , including fresh solvent and solvent recovered on-site from the distiller, in tons; 3) total weight of VOC-containing material recovered on-site from the distiller, in tons; 4) total weight of water-based coating used in COMG 1 , in tons;

Commented [A36]: Revise based on EPA PPRTV toxicity data. See Water Gremlin's comments on the draft permit in the cover letter.

Commented [A37]: The 32.6 TPY derives from the misapplication of the 20 ug/m3 limit and ambient monitoring data using a 365-day rolling average instead of a long-term average. Application of the EPA PPRTV reflects a 40 chronic and 400 sub-chronic health benchmark. This translates to an allowable coating usage limit of more than 100 TPY based on risk thresholds. As described in Water Gremlin's comments on the draft permit in the cover letter, the company proposed a reasonable TDCE limit and phase down as it converts its operations to UV coating systems. This proposal was rejected by the MPCA.

Commented [A38]: If this limit includes non-coating rooms, it should be at TFAC level, not at the COMG 1 level.

Commented [A39]: See above comments. The inventory tracking and mass balance approach conservatively assumes what is used and emitted, therefore separate quantification of TDCE and waste material is not necessary.

Commented [A40]: Excessive audit requirement. Annual audits are sufficient.

Commented [A41]: See above comment. There is a significant delta between max usage and actual usage, and MPCA can review all tracking data.

Commented [A42]: Daily recordkeeping should instead be weekly or monthly. The VOC limit is an annual limit and the t-DCE health-based standards are long-term chronic standards.

Commented [A43]: See above. Daily recordkeeping should instead be weekly or monthly. The VOC limit is an annual limit and the t-DCE health-based standards are long-term chronic standards.

Requirement number	Requirement and citation
	5) total weight of UV coating used in COMG 1 , in tons; 6) total weight of VOC-containing material that leaves the facility as waste according to the Waste Credit requirement if taking credit for compliance with the VOC emission limit, in tons; 7) daily VOC emissions for all equipment in COMG 1 for the previous operating day using the formulas specified elsewhere in this permit; and 8) 365-day rolling sum VOC emissions for all equipment in COMG 1 for the previous 365 day period by summing the daily VOC emissions data for the previous 365 days. [Minn. R. 7007.0800, subps. 4-5]
5.2.6	1,2-(trans-) Dichloroethylene: Daily Recordkeeping. By 4:30 pm on each day of operation, the Permittee shall measure or calculate, record, and maintain a record of the following for the previous operating day: 1) total weight of each 1,2-(trans-) Dichloroethylene coating and solvent used in COMG 1 , in tons; 2) total weight of 1,2-(trans-) Dichloroethylene used in COMG 1, assuming the entire VOC content in the ~~coating and solvent material~~solvent is 1,2-(trans-) Dichloroethylene, in tons. This shall include fresh solvent and solvent recovered on-site from the distiller; 3) total weight of 1,2-(trans-) Dichloroethylene VOC-containing material recovered on-site from the distiller, in tons; 4) total weight of 1,2-(trans-) Dichloroethylene recovered from the distiller following the procedures in Appendix B to determine the 1,2-(trans-) Dichloroethylene content in material recovered on-site from the distiller, in tons; 5) total weight of 1,2-(trans-) Dichloroethylene VOC-containing material that left the facility as waste if taking credit for compliance with the 1,2-(trans-) Dichloroethylene emission limit, in tons; 6) total weight of 1,2-(trans-) Dichloroethylene that left the facility as waste following the procedures in Appendix B to determine the 1,2-(trans-) Dichloroethylene content if taking credit for compliance with the 1,2-(trans-) Dichloroethylene emission limit, in tons; 7) total weight of fugitive 1,2-(trans-) Dichloroethylene emissions based on measured indoor air concentrations in non-coating rooms using the ~~concentrations and procedures in Appendix B~~default uncaptured emission rate in 5.2.10, unless updated as described in Appendix B, in tons; 8) total weight of 1,2-(trans-) Dichloroethylene emissions using the formulas specified in this permit; and 9) 365-day rolling sum of 1,2-(trans-) Dichloroethylene emissions for the previous 365 day period by summing the daily 1,2-(trans-) Dichloroethylene emissions data for the previous 365 days. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) &9(2)]
5.2.7	Volatile Organic Compounds: Volatile Organic Compounds: Monthly Calculations. The Permittee shall calculate VOC emissions using the following equations: VOC (tons/month) = V - W V = (A1 x B1) + (A2 x B2) + (A3 x B3) +.....+ (C1 x D1) + (C2 x D2) + (C3 x D3).....+ (E1 x F1) + (E2 x F2) + (E3 x F3) +..... W = (G1 x H1) + (G2 x H2) + (G3 x H3) +..... Where: V = total weight of VOC used, in tons/month; A# = total weight of VOC-containing material used in COMG 1 based on daily usage logs, in tons/month. The VOC containing material weight must include the initial weight of prepared coating in each coater-specific tank as well as the weight of solvent added to each tank to thin out the coating; B# = weight percent VOC in A# defined in Appendix B, as a fraction. The weight percent for the formulation allowed by this permit is 0.90 lb VOC/lb solvent. The requirements to approve the use of other formulations and emission factors are defined elsewhere in this permit; C# = total weight of UV coating used in COMG 1 based on daily usage logs, in tons/month; D# = VOC emission factor for UV coating, as lb VOC/lb coating. The emission factor for UV coating allowed by this permit 0.0031 lb VOC/lb coating. The requirements to approve the use of other VOC

Commented [A44]: See above. Daily recordkeeping should instead be weekly or monthly. The VOC limit is an annual limit and the t-DCE health-based standards are long-term chronic standards.

Commented [A45]: Strike this language. Fugitive emissions have been evaluated and modeled with a safety factor that eliminates the need for daily recordkeeping or ongoing sampling.

Commented [A46]: This calculation should be based on the value in 5.2.10 unless it is updated as described in Appendix B.

Commented [A47]: Note that this value will begin to be calculated upon permit issuance and will not be back-calculated from previous data.

Commented [A48]: Note that this value will begin to be calculated upon permit issuance and will not be back-calculated from previous data.

Commented [A49]: This equation is inconsistent with the tracking that has been ongoing as part of the Administrative Order. If the Administrative Order is not terminated, Water Gremlin will be subject to conflicting VOC calculations to meet each document's requirement. Water Gremlin reiterates that the Administrative Order should be terminated as its ongoing requirements have been incorporated into the air permit.

Requirement number	Requirement and citation
	emission factors are defined elsewhere in this permit. E# = total weight of each water-based coating solids used in COMG 1 based on daily usage logs, in tons/month; F# = VOC emission factor from water-based coating, as lb VOC/lb coating. The emission factor for water-based coating allowed by this permit 0.00001~~57~~ lb VOC/lb ~~coating~~solids. The requirements to approve the use of other VOC emission factors are defined elsewhere in this permit. W = total weight of VOC shipped in waste, in tons/month; G# = total weight of each VOC-containing waste material shipped based on daily usage logs, in tons/month. If the Permittee chooses to not take credit for waste shipments, this parameter would be zero; and H# = weight percent of VOC in G#, defined in Appendix B and the Waste Credit requirement in COMG 1, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.2.8	1,2-(trans-) Dichloroethylene: Daily Calculations. The Permittee shall calculate 1,2-(trans-) Dichloroethylene emissions using the following equations: 1,2-(trans-) Dichloroethylene (tons/day) = T - X T = (I1 x J1) + (I2 x J2) + (I3 x J3) +.....+ K X = (M1 x N1) + (M2 x N2) + (M3 x N3) +..... Where: T = total weight of 1,2-(trans-) Dichloroethylene used, in tons/day; I# = total weight of 1,2-(trans-) Dichloroethylene VOC-containing material used in COMG 1 based on daily usage logs, in tons/day. The 1,2-(trans-) Dichloroethylene VOC-containing material weight must include the initial weight of prepared coating in each coater-specific tank as well as the weight of 1,2-(trans-) Dichloroethylene VOC solvent added to each tank to thin out the coating; J# = weight percent of 1,2-(trans-) Dichloroethylene in I# defined in Appendix B, as a fraction. The weight percent for the formulation allowed by this permit is 0.90 lb 1,2-(trans-) Dichloroethylene /lb solvent. The requirements to approve the use of other formulations and emission factors are defined elsewhere in this permit; X = total weight of 1,2-(trans-) Dichloroethylene shipped in waste, in tons/day; M# = total weight of 1,2-(trans-) Dichloroethylene VOC-containing material shipped in waste based on daily usage logs, in tons/day. If the Permittee chooses to not take credit for waste shipments, this parameter would be zero; N# = weight percent of 1,2-(trans-) Dichloroethylene in M#, as a fraction, as determined in Appendix B and by the Waste Credit requirements elsewhere in this permit; K = default daily uncaptured 1,2-(trans-) Dichloroethylene emissions based on measured indoor air concentrations of non-coating rooms, in tons/day, as described elsewhere in this permit; and. [Minn. R. 7007.0800, subps. 4-5]
5.2.9	~~Daily Reporting: The Permittee shall continue to comply with the requirements of all effective enforcement documents until those documents are terminated by MPCA. As of issuance of Permit No. 12300341-101, these enforcement documents include the Stipulation Agreement executed March 1, 2019, and the Administrative Order signed January 17, 2020. These documents are included for reference as Attachments 5 and 6 to the TSD of this permit, respectively. [Minn. R. 7007.0800, subp. 2(A) & (B)]~~
5.2.10	~~1,2-(trans-) Dichloroethylene: Default Uncaptured Emission Rate.~~ ~~The Default Uncaptured Emission Rate to be used based on measured indoor air concentrations in non-coating rooms for the purposes of calculating total daily 1,2-(trans-) Dichloroethylene emissions are defined as follows:~~ ~~Default 1,2-(trans-) Dichloroethylene Uncaptured Emission Rate = 0.00324 tons/day~~

Commented [A50]: The emission factor for VOCs presented here is incorrect. The VOCs associated with the water-based coating have a VOC content of 0.001%, or 0.00001 lb VOC/lb water-based solids. Water Gremlin tracks the amount of solids in their formulation, so the corrected equation is: VOC from water-based coating = total weight of solids in water-based coating * 0.00001 lb VOC/lb solids.

Commented [A51]: See above. Daily recordkeeping should instead be weekly or monthly. The VOC limit is an annual limit and the t-DCE health-based standards are long-term chronic standards.

Commented [A52]: Agreement and Order should be terminated upon permit issuance; requirements are already included in the permit.

Requirement number	Requirement and citation
	~~The Permittee shall add this value (K) to the total daily 1,2 (trans) Dichloroethylene emissions following the requirements of this permit. The Permittee may change the default uncaptured emission rate following the requirements specified in this permit and the procedures in Appendix B. [Minn. R. 7007.0800, subps. 4-5]~~
5.2.11	~~1,2 (trans) Dichloroethylene: Changes to Default Uncaptured Emission Rates.~~ ~~The Permittee may change the default uncaptured emission rate based on approved indoor testing of non-coating rooms at the facility identified in Appendix B. The revised emission rates shall be calculated as follows:~~ ~~DFE = (Y1 x Z1) + (Y2 x Z2) + (Y3 x Z3) +.....~~ ~~where:~~ ~~DFE = Default Uncaptured Emission rate of 1,2 (trans) Dichloroethylene, in tons/day;~~ ~~Y# = concentration of 1,2 (trans) Dichloroethylene measured in each non-coating room at the facility described in Appendix B, in tons/actual cubic foot; and~~ ~~Z# = total actual flow rate of all vents associated with each non-coating room at the facility, in actual cubic feet/day. [Minn. R. 7007.0800, subps. 4-5]~~
5.2.12	~~1,2 (trans) Dichloroethylene: Reconciliation of Predicted Stack Concentration and CEMS (EQUI 176) Readings.~~ ~~By 4:30pm each coating operating day, the Permittee shall calculate and record the predicted stack concentration of 1,2 (trans) Dichloroethylene versus 1,2 (trans) Dichloroethylene usage the following equation:~~ ~~y = 0.1295x + 49.163~~ ~~Where:~~ ~~y = predicted 1,2 (trans) Dichloroethylene stack concentration, in ppmv wet of Total Hydrocarbon Concentration as 1,2 (trans) Dichloroethylene;~~ ~~x = 1,2 (trans) Dichloroethylene usage, in pounds per day, from daily t-DCE containing VOC coating and solvent usage records. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. Stat. 116.07, subd. 9(2)]~~
5.2.13	~~Reconciliation of Predicted Stack Concentration and CEMS Readings Audit: If the daily CEMS (EQUI 176) reading exceeds the predicted 1,2 (trans) Dichloroethylene stack concentration for that day, in ppmv wet, the Permittee shall immediately audit the 1,2 (trans) Dichloroethylene containing material usage and inventory records to determine the cause of this discrepancy and shall report this as a deviation. The Permittee shall implement needed corrections based on this review. The Permittee shall keep records of each calculation, whether a deviation was observed, and whether a correction was made and how the correction was made. [Minn. R. 7007.0800, subps. 4-6, Minn. Stat. 116.07, subd. 9(2)]~~
5.2.14	Material Content. VOC and Solids (PM, PM<10 microns, and PM<2.5 microns) contents in coating materials shall be determined by the Safety Data Sheet (SDS) or the Material Safety Data Sheet (MSDS) provided by the supplier for each material used. If a material content range is given on the SDS or the MSDS, the highest number in the range shall be used in all compliance calculations. If information is provided in the Regulatory Section of the SDS, the highest number in the range of that section may be used. Other alternative methods approved by the MPCA may be used to determine the VOC and solids contents. If the SDS, MSDS, or information from the vendor is not available, ~~T~~the Commissioner reserves the right to require the Permittee to determine the VOC and solids contents of any coating material, according to EPA or ASTM reference methods. ~~If an EPA or ASTM reference method is used for material content determination, the data obtained shall supersede the SDS or the MSDS.~~ [Minn. R. 7007.0800, subps. 4-5]
5.2.15	Maximum Contents of Materials and Process Rate: The Permittee assumed certain worst-case contents of materials and process rates when determining the short-term potential to emit of units in COMG 1. These assumptions are listed in Appendix B and Appendix C of this permit. Increasing the

Commented [A53]: This requirement is unnecessary.

Commented [A54]: This equation was established based on faulty correlation of CEMS results with VOC tracking data. The CEMS analyzes and reports total hydrocarbons while the VOC tracking data includes t-DCE but also natural gas and mitigation system assumed emissions, not actual emissions. Additionally, the CEMS results are reported based on the calibration times and are often approximately 10 am to 10 am. The VOC tracking sheet reports 6 am to 6 am. The CEMS should be discontinued and tracking against health benchmarks be based on t-DCE usage and inventory data.

Commented [A55]: The stack CEMS does not measure t-DCE concentration. It measures total hydrocarbons and reports the results as "THC as t-DCE." As such, results have been improperly correlated by MPCA and the agency has years of data to verify these differences. The mass balance is sufficient as demonstrated by the Company's tracking over the last three years.

Commented [A56]: Delete the CEMS requirement. CEMS for STRU73 is not necessary nor useful. See comment letter for further information.

Commented [A57]: Not all VOC from STRU 3 is t-DCE.

Requirement number	Requirement and citation
	process rate or changing to a material that has a higher content of any of the given pollutants, or an addition of a pollutant not listed in Appendix B or Appendix C, is considered a change in method of operation that must be evaluated under Minn. R. 7007.1200, subp. 3 to determine if a permit amendment or notification is required under Minn. R. 7007.1150. [Minn. R. 7005.0100, subp. 35a]
5.2.16	Waste Credit for Calculation of VOC Emissions: If the Permittee elects to obtain credit for VOC shipped in waste materials, the Permittee shall either use item 1 or 2 to determine the VOC content for each credited shipment. 1) The Permittee shall analyze a representative composite sample of ~~each~~ a representative waste shipment to determine the weight content of VOC, excluding water following the procedures in Appendix B. 2) The Permittee may use supplier data for raw materials to determine the VOC contents of each waste shipment, using the same content data used to determine the content of raw materials. If the waste contains several materials, the content of mixed waste shall be assumed to be the lowest VOC content of any of the materials. [Minn. R. 7007.0800, subps. 4-5]
5.2.17	Waste Credit for Calculation of 1,2-(trans-) Dichloroethylene Emissions: If the Permittee elects to obtain credit for 1,2-(trans-) Dichloroethylene shipped in waste materials, the Permittee shall determine the specific content of 1,2-(trans-) Dichloroethylene in waste material, in weight percent, following the analysis procedure and frequency requirements in Appendix B. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.2.18	Conversion of VOC Spray Coater(s) to VOC Dip/Drip Coater(s). The Permittee is authorized to modify existing spray VOC coaters to dip/drip application methods. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for VOC coaters described under COMG 1 and COMG 5, and be removed from COMG 4 and COMG 14 for compliance demonstration purposes. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.19	Conversion of VOC Spray Coater(s) to Water-Based Spray Coater(s). The Permittee is authorized to modify existing spray VOC coaters to use Tacolyn 3570 water-based coating applied by spray methods. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for water-based coaters described under COMG 1, COMG 5, and COMG 8, and COMG 14, and be removed from COMG 4 for compliance demonstration purposes. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.20	Conversion of VOC Spray Coater(s) to Water-Based Dip/Drip Coater(s). The Permittee is authorized to modify existing spray VOC coaters to use Tacolyn 3570 water-based coatings applied by dip/drip methods. A permit amendment may be needed if there is a ~~n~~significant increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a

	permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for water-based coaters described under COMG 1 and be removed from COMG 4, COMG 5, and COMG 14 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.21	Conversion of VOC Spray Coater(s) to Ultraviolet (UV) Spray Coater(s). The Permittee is authorized to modify existing VOC spray coaters to use the WGCS 300 UV spray coating method. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for UV coaters described under COMG 1, COMG 2, COMG 5, and COMG 14, and shall be removed from COMG 4 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.22	Conversion of VOC Dip/Drip Coater(s) to Water-Based Spray Coater(s). The Permittee is authorized to modify existing VOC dip/drip coaters to use Tacolyn 3570 water-based coatings applied by spray methods. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for water-based coaters described under COMG 1, COMG 5, COMG 8, and COMG 14 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.23	Conversion of VOC Dip/Drip Coater(s) to Water-Based Dip/Drip Coater(s). The Permittee is authorized to modify existing VOC dip/drip coaters to use Tacolyn 3570 water-based coatings applied by dip/drip methods. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for water-based coaters described under COMG 1 and be removed from COMG 5 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.24	Conversion of VOC Dip/Drip Coater(s) to Ultraviolet (UV) Spray Coater(s). The Permittee is authorized to modify existing VOC dip/drip coaters to use the WGCS 300 UV spray coating method. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the

Requirement number	Requirement and citation
	Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for UV coaters described under COMG 1, COMG 2, COMG 5, and COMG 14 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.25	The Permittee is prohibited from making any of the following changes without a major permit amendment to extend enforcement of the existing emission limit caps and emission calculation methods. The Permittee may submit to MPCA an applicability determination to confirm the need for a major amendment when planning any of the modifications listed below: 1) Converting any type of existing VOC coater to any type of VOC coater in a manner that increases potential emissions of any pollutant; 2) Replacing any type of existing VOC coater with any type of new VOC coater that results in increased emissions; 3) Adding any type of new VOC coater; 4) Converting any type of strictly water-based coater to any type of strictly VOC coater. This does not apply to existing hybrid coaters identified in Appendix B as able to apply water-based and/or VOC coatings; 5) Replacing any type of strictly water-based coater with any type of strictly VOC coater. This does not apply to existing hybrid coaters identified in Appendix B as able to apply water-based and/or VOC coatings; 6) Converting any type of existing UV coater to any type of VOC coater; or 7) Replacing any type of existing UV coater with any type of VOC coater. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.26	Conversion of Water-Based Spray Coater(s) to Water-Based Dip/Drip Coater(s). The Permittee is authorized to modify existing water-based spray coaters to use Tacolyn 3570 water-based coatings applied by dip/drip methods. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for water-based coaters described under COMG 1 and be removed from COMG 8 and COMG 14 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.27	Conversion of Water-Based Dip/Drip Coaters to Water-Based Spray Coaters. The Permittee is authorized to modify existing water-based dip/drip coaters to use Tacolyn 3570 water-based coatings applied by spray methods. A permit amendment may be needed if there is a significnat~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for water-based coaters described under COMG 1, COMG 5, COMG 8, and COMG 14 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]

Requirement number	Requirement and citation
5.2.28	Conversion of Water-Based Spray Coater(s) to Ultraviolet (UV) Spray Coater(s). The Permittee is authorized to modify water-based spray coaters to use the WGCS 300 UV spray coating method. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for UV coaters described under COMG 1, COMG 2, COMG 5, and COMG 14, and be removed from COMG 8 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.29	Conversion of Water-Based Dip/Drip Coater(s) to Ultraviolet (UV) Spray Coater(s). The Permittee is authorized to modify water-based dip/drip coaters to use the WGCS 300 UV spray coating method. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for UV coaters described under COMG 1, COMG 2, COMG 5, and COMG 14 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.30	Replacement of Existing Water-Based Spray Coater(s) and Addition of New Water-Based Spray Coater(s). The Permittee is authorized to replace existing water-based spray coaters with new water-based spray coaters, and add additional new water-based spray coaters. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the new coater(s) shall comply with all requirements for water-based spray coaters described under COMG 1, COMG 5, COMG 8, and COMG 14 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.31	Replacement of Existing Water-Based Dip/Drip Coater(s). Change of Location of Water-Based Dip/Drip Coater(s) Outside the Coating Rooms Exhausting Through STRU 73, and Addition of New Water-Based Dip/Drip Coater(s). The Permittee is authorized to replace existing water-based dip/drip coaters with new water-based dip/drip coaters, or change the location of existing water-based dip/drip coaters to a location outside the coating rooms exhausting through STRU 73, or install new water-based dip/drip coaters. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the new coater(s) shall comply with all requirements for water-based coaters described under COMG 1 for compliance demonstration

Requirement number	Requirement and citation
	purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.32	Conversion of Ultraviolet (UV) Spray Coater(s) to Water-Based Spray Coater(s). The Permittee is authorized to modify existing UV coaters to use water-based coaters with spray application methods. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for water-based coaters described under COMG 1, COMG 5, COMG 8, and COMG 14, and be removed from COMG 2 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.33	Conversion of Ultraviolet (UV) Spray Coater(s) to Water-Based Dip/Drip Coater(s). The Permittee is authorized to modify existing UV coaters to use water-based coaters with dip/drip application methods. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the converted coater(s) shall comply with all requirements for water-based coaters described under COMG 1, and be removed from COMG 2, COMG 5, and COMG 14 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.34	Replacement of Existing UV Spray Coater(s) and Addition of New UV Spray Coater(s). The Permittee is authorized to replace existing UV coaters with new UV coaters, and add additional new UV coaters. A permit amendment may be needed if there is a significant~~n~~ increase of regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the new coater(s) shall comply with all requirements for UV coaters described under COMG 1, COMG 2, COMG 5, and COMG 14 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.35	Replacement of Existing VOC Dip/Drip Coater(s). The Permittee is authorized to replace existing VOC dip/drip coater with new VOC dip/drip coater of equal or lower design capacity so that there is no increase of potential emissions of t-DCE. A permit amendment may be needed if there is a significant~~n~~ increase of other regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the new coater(s) shall comply with all requirements for VOC Dip/Drip coaters described under COMG 1 and

Requirement number	Requirement and citation
	COMG 5 for compliance demonstration purposes. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.385, subd. 3]
5.2.36	Replacement of Existing VOC spray Coater(s). The Permittee is authorized to replace existing VOC spray coater with new VOC dip/drip coater of equal or lower design capacity so that there is no increase of potential emissions of t-DCE or PM10 or PM2.5. A permit amendment may be needed if there is a significant ~~n~~ increase of other regulated pollutants based on the design capacity of the modified equipment, the change will be subject to a newly applicable requirement, or there are revisions to limits or the monitoring and recordkeeping in this permit. If a permit amendment is required for this change, the Permittee shall apply for and obtain the appropriate permit amendment before making the change, as applicable. If no permit amendment is needed, the Permittee shall notify the Agency within 30 days before the change is implemented as required elsewhere in this permit. On the first day of operation, the new coater(s) shall comply with all requirements for VOC spray coaters described under COMG 1, COMG 5, COMG 4 and COMG 14 for compliance demonstration purposes. [Minn. R. 7007.0800, subp. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.37	VOC Solvent Formulation: The Permittee shall limit VOC solvent use to the formulation described in Appendix B of this permit or an equivalent formulation. For authorization to use alternative VOC solvents with formulations that increase emissions of chemicals identified under the Toxicological or Ecological Information section of the Safety Data Sheet, or that add new chemicals not identified in the Toxicological or Ecological Information section of the Safety Data Sheet~~, or~~ that increase the VOC content above 90 percent (by weight), the Permittee shall submit a major amendment with a revised Air Emissions Risk Analysis (AERA) following procedures as required under Minn. R. 7007.1500. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.38	Water-Based Coating Formulation: The Permittee shall limit use of water-based coating to the formulation described in Appendix B of this permit or an equivalent formulation. For authorization to use other water-based coatings with formulations that increase emissions of any chemical identified under the Toxicological or Ecological Information section of the Safety Data Sheet, or that add new chemicals not identified in the Toxicological or Ecological Information section of the Safety Data Sheet, the Permittee shall submit a major amendment following procedures as required under Minn. R. 7007.1500. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.39	Ultraviolet (UV) Coating Formulation: The Permittee shall limit use of UV coating to the formulation described in Appendix B of this permit or an equivalent formulation. For authorization to use other UV coatings with formulations that increase emissions of any chemical identified under the Toxicological or Ecological Information section of the Safety Data Sheet, or that add new chemicals not identified in the Toxicological or Ecological Information section of the Safety Data Sheet, the Permittee shall submit a major amendment following procedures as required under Minn. R. 7007.1500. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.2.40	The Permittee is prohibited from using any coating that contains any hazardous air pollutant (HAP), including the target HAPs as defined under 40 CFR Section 63.11180. The Permittee shall keep records that describe the HAP content in each coating used based on manufacturing data or coating analysis as prescribed in Appendix B. [Minn. R. 7007.0800, subp. 2(A)]

5.2.41	VOC Coater Installation Requirements: The Permittee shall install and maintain each VOC coater to meet the following requirements: 1) Non-table top coaters shall be fitted with a stainless steel catch pan designed to catch and minimize spills of coating material and any other contaminants associated with the coating process; 2) Table-top coaters shall be placed in a catch pan or other secondary containment vessel designed to catch and minimize spills of coating material and any other contaminants associated with the coating

Commented [A58]: Catch pans meant to prevent intrusion to the sub-slab, which is only applicable for VOC coating, not spray coating. This requirement should not be in this COMG and should be specified for VOC COMG only.

Requirement number	Requirement and citation
	process; and 3) Non-table top coaters shall be enclosed on all sides, including the top. Concrete walls may not be utilized as part of the coater enclosure. [Minn. R. 7007.0800, subp. 2(A) & (B)]
5.2.42	Battery Terminal Post Coaters: Daily Maintenance. At the end of each shift on each operating day, the Permittee shall inspect each VOC, water-based, and UV coater in COMG 1 for coating spills and other materials in coater catch pans, secondary containment, and/or the floor. The Permittee shall clean and dispose of any coating material that is determined by the permittee to be a hazardous waste at the time of disposition, or other hazardous ~~waste~~material removed from~~, or other hazardous substance discovered in~~ coater catch pans, secondary containment, or the floor in accordance with applicable state and local hazardous waste, solid waste, recycling and reuse regulations, and the material handling recommendations from the manufacturer of the coatings and solvents used. The Permittee shall keep records of coaters cleaned and corrective actions taken to prevent spills. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. ch. 7045]
5.2.43	Coating Transfer: The Permittee shall perform all transfers of VOC solvent and VOC-containing materials, including mixing of coating formulations, inside a coating room meeting the requirements of COMG 5. Transfer of VOC-containing materials via open containers outside the coating room including, but not limited to buckets, beakers, etc., is prohibited. [Minn. R. 7007.0800, subp. 2(A) & (B)]
5.2.44	VOC-Containing Material Storage: The Permittee shall keep lids securely in place on all VOC-containing material storage and transfer containers while not in active use. [Minn. R. 7007.0800, subp. 2(A) & (B)]
COMG 2	**PM10 and PM2.5: Limits and Compliance Requirements for Ultraviolet (UV) Battery Terminal Post Coaters**
5.3.1	The Permittee shall install, operate and maintain each ultraviolet (UV) battery terminal post coater subject to COMG 2 requirements inside a coating room meeting the requirements of COMG 5. This requirement does not apply to EQUI 82, EQUI 117, or EQUI 240. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.3.2	The Permittee shall vent emissions from each ultraviolet (UV) battery terminal post coater subject to COMG 2 requirements to control equipment meeting the requirements of COMG 14 whenever each ultraviolet (UV) battery terminal post coater operates. This requirement does not apply to EQUI 82, EQUI 117, or EQUI 240. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.3.3	Each ultraviolet (UV) battery terminal post coater subject to COMG 2 requirements is subject to the requirements in COMG 1 except as noted within COMG 1. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.3.4	Each ultraviolet (UV) battery terminal post coater operated at the facility is subject to the requirements in COMG 5. This requirement does not apply to EQUI 117 and EQUI 240. [Minn. R. 7007.0800, subp. 2(A) & 2(B), Minn. R. 7007.0800, subps. 4-5, Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.3.5	The Permittee is prohibited from using any coating that contains any hazardous air pollutant (HAP), including the target HAPs as defined under 40 CFR Section 63.11180. [Minn. R. 7007.0800, subp. 2(A)]
5.3.6	Daily Recordkeeping. On each day of operation, the Permittee shall calculate, record, and maintain a record of the total quantity of each coating and other solids-containing material, including the solids content of each coating (as a mass fraction), used by each coater in COMG 2. This shall be based on written usage logs. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.3.7	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate, record, and maintain a record of the following for the previous operating day using the daily

Commented [A59]: Catch pans meant to prevent intrusion to the sub-slab, which is only applicable for VOC coating, not spray coating. This requirement should not be in this COMG and should be specified for VOC COMG only.

Commented [A60]: UV coating is not a hazardous waste. This requirement should be specific to VOC coaters, if applicable.

Commented [A61]: This is too general a statement. There are requirements in COMG 5 that do not apply to UV coaters, such as catch pans and the VOC and water-based solvent formulations. Remove this requirement from COMG 2.

Commented [A62]: Redundant to 5.2.40, especially given above requirement. Also, UV formulation does not have HAPs.

Requirement number	Requirement and citation
	usage records: 1) Total weight of UV coating used by each unit in COMG 2, in pounds/day; and 2) Daily average hourly emissions of PM10 and PM2.5 from all coaters in COMG 2 as determined elsewhere in this permit, in pounds/hour. This record shall also include solids contents of each material as determined by the Material Content requirement of this permit. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.3.8	PM < 10 micron: Daily Calculations. The Permittee shall calculate PM10 emissions from COMG 2 using the following equations: PM10UV = [TPM10UV (uncontrolled) + TPM10UV (controlled)] / 24 TPM10UV (uncontrolled) = [(KUV1 x LUV1) + (KUV2 x LUV2) + (KUV3 x LUV3)] TPM10UV (controlled) = [(KUV1 x LUV1) + (KUV2 x LUV2) + (KUV3 x LUV3)] x (1-CE1) where: PM10UV = daily average PM10 emissions from COMG 2, in pounds/hour; TPM10UV = total daily PM10 emissions from each EQUI in COMG 2, in pounds/day; KUV# = total weight of coating used in COMG 2 based on daily usage logs, in pounds/day; and LUV# = uncontrolled PM10 emission factor, in pounds PM10 per pound of coating, listed in Appendix B, as a fraction. Other uncontrolled emission factors allowed by this permit shall be based on the most recent MPCA-approved stack test results performed according to approved replicable methodology (ARM) requirements; and CE1 = minimum PM10 control efficiency required by COMG 14 for the coaters required to be controlled, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.3.9	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate PM2.5 emissions from COMG 2 using the following equations: PM2.5UV = TPM2.5UV (uncontrolled) + TPM2.5UV (controlled)] / 24 TPM2.5UV (uncontrolled) = [(KUV1 x PUV1) + (KUV2 x PUV2) + (KUV3 x PUV3)] TPM2.5UV (controlled) = [(KUV1 x PUV1) + (KUV2 x PUV2) + (KUV3 x PUV3)] x (1-CE2) where: PM2.5UV = daily average PM2.5 emissions from COMG 2, in pounds/hour; TPM2.5UV = total daily PM2.5 emissions from each EQUI in COMG 2, in pounds/day; KUV# = total weight of coating used in COMG 2 based on daily usage logs, in pounds/day; and PUV# = uncontrolled PM2.5 emission factor, in pounds PM2.5 per pound of coating, listed in Appendix B, as a fraction. Other uncontrolled emission factors allowed by this permit shall be based on the most recent MPCA-approved stack test results performed according to approved replicable methodology (ARM) requirements; and CE2 = minimum PM2.5 control efficiency required by COMG 14 for the coaters required to be controlled, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.3.10	Maximum Contents of Materials and Process Rate: The Permittee assumed certain worst-case contents of materials and process rates when determining the short-term potential to emit of units in COMG 2. These assumptions are listed in Appendix B of this permit. Increasing the process rate or changing to a material that has a higher content of any of the given pollutants, or an addition of a pollutant not listed in Appendix B, is considered a change in method of operation that must be evaluated under Minn. R. 7007.1200, subp. 3 to determine if a permit amendment or notification is required under Minn. R. 7007.1150. [Minn. R. 7005.0100, subp. 35a]

Requirement number	Requirement and citation
5.3.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of coating in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of coating, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.3.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.3.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.3.14	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of coating in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM2.5 per pound of coating, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.3.15	~~PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.3.16	PM < 2.5 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
COMG 4	**PM10 and PM2.5: Limits and Compliance Requirements for VOC Spray Battery Terminal Post Coaters**

Commented [A63]: This applies to all instances where only Method 201A is identified. As discussed in the MPCA-WG-Stantec meeting on March 3, 2022, this is an important change to allow Water Gremlin the flexibility to conduct coater performance tests at the coater level instead of forcing testing to occur on STRU 73 due to insufficient duct sizes to allow for Method 201A.

Commented [A64]: The permit has conditions that test plans need to be approved. There is no need for a major amendment to essentially approve a test plan if the protocol in 5.3.8 (or related) is not ideal for an emission factor test. This comment applies to every instance of this requirement for PM10 or PM2.5.

Commented [A65]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A66]: Combine COMG 4 and COMG 8 and delete repetitive requirements. Requirements can be made on individual EQUI level instead.

Requirement number	Requirement and citation
5.4.1	The Permittee shall install, operate and maintain each VOC spray battery terminal post coater subject to COMG 4 requirements inside a coating room meeting the requirements of COMG 5. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.4.2	The Permittee shall vent emissions from each VOC spray battery terminal post coater subject to COMG 4 requirements to control equipment meeting the requirements of COMG 14 whenever each VOC spray battery terminal post coater operates. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.4.3	Each VOC spray battery terminal post coater subject to COMG 4 requirements is subject to the requirements in COMG 1. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.4.4	The Permittee is prohibited from using any coating that contains any hazardous air pollutant (HAP), including the target HAPs as defined under 40 CFR Section 63.11180. [Minn. R. 7007.0800, subp. 2(A)]
5.4.5	Daily Recordkeeping. On each day of operation, the Permittee shall calculate, record, and maintain a record of the total quantity of each coating and other solids-containing material, including the solids content of each coating (as a mass fraction), used by each coater in COMG 4. This shall be based on written usage logs. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.4.6	Particulate Matter: Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate, record, and maintain a record of the following for the previous operating day using the daily usage records: 1) Total weight of VOC coating used by each unit in COMG 4, in pounds/day; and 2) Daily average hourly emissions of PM10 and PM2.5 from all coaters in COMG 4 as determined elsewhere in this permit, in pounds/hour. This record shall also include solids contents of each material as determined by the Material Content requirement of this permit. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.4.7	PM < 10 micron: Daily Calculations. The Permittee shall calculate PM10 emissions from COMG 4 using the following equations: PM10VOC = TPM10VOC/24 TPM10VOC = [(IVOC1 x JVOC1) + (IVOC2 x JVOC2) + (IVOC3 x JVOC3)] x (1-TE) x (1-CE1) where: PM10VOC = daily average PM10 emissions from COMG 4, in pounds/hour; TPM10VOC = total daily PM10 emissions from each EQUI in COMG 4, in pounds/day; IVOC# = total weight of coating used in COMG 4 based on daily usage logs, in pounds/day; and JVOC# = solids content of coating used in IVOC#, in weight percent; TE = minimum transfer efficiency allowed by the permit as of permit issuance (65 percent). Other transfer efficiencies allowed by this permit shall be based on the most recent MPCA-approved stack test results according to approved replicable methodology (ARM) requirements; and CE1 = minimum PM10 control efficiency required by COMG 14, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.4.8	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate PM2.5 emissions from COMG 4 using the following equations: PM2.5VOC = TPM2.5VOC/24 TPM2.5VOC = [(IVOC1 x JVOC1) + (IVOC2 x JVOC2) + (IVOC3 x JVOC3)] x (1-TE) x (1-CE2) where:

Commented [A67]: Redundant to COMG 5 requirement. All coaters in COMG 4 are also in COMG 5.

Commented [A68]: Redundant to COMG 1 requirement. All coaters in COMG 4 are also in COMG 1.

Commented [A69]: Redundant.

Requirement number	Requirement and citation
	PM2.5VOC = daily average PM10 emissions from COMG 4, in pounds/hour; TPM2.5VOC = total daily PM2.5 emissions from each EQUI in COMG 4, in pounds/day; IVOC# = total weight of coating used in COMG 4 based on daily usage logs, in pounds/day; and JVOC# = solids content of coating used in IVOC#, in weight percent; TE = minimum transfer efficiency allowed by the permit as of permit issuance (65 percent). Other transfer efficiencies allowed by this permit shall be based on the most recent MPCA-approved stack test results according to approved replicable methodology (ARM) requirements; and CE2 = minimum PM2.5 control efficiency required by COMG 14, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.4.9	Material Content. Solids (PM, PM<10 microns, and PM<2.5 microns) contents in coatings and other materials used in COMG 4 shall be determined by the Safety Data Sheet (SDS) or the Material Safety Data Sheet (MSDS) provided by the supplier for each material used. If a material content range is given on the SDS or the MSDS, the highest number in the range shall be used in all compliance calculations. If there is information provided in the Regulatory Section of the SDS, the highest number in the range of that section may be used. Other alternative methods approved by the MPCA may be used to determine the solids content. The Commissioner reserves the right to require the Permittee to determine the solids content of any material, according to EPA or ASTM reference methods. If an EPA or ASTM reference method is used for material content determination, the data obtained shall supersede the SDS or the MSDS. [Minn. R. 7007.0800, subp. 4-5]
5.4.10	Maximum Contents of Materials and Process Rate: The Permittee assumed certain worst-case contents of materials and process rates when determining the short-term potential to emit of units in COMG 4. These assumptions are listed in Appendix B of this permit. Increasing the process rate or changing to a material that has a higher content of any of the given pollutants, or an addition of a pollutant not listed in Appendix B, is considered a change in method of operation that must be evaluated under Minn. R. 7007.1200, subp. 3 to determine if a permit amendment or notification is required under Minn. R. 7007.1150. [Minn. R. 7005.0100, subp. 35a]
5.4.11	Transfer efficiency for PM < 10 micron: Protocol for Re-Setting the Transfer efficiency Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission rates in pound PM10 per hour and transfer efficiency in pound PM10 per pound of solids (as applied) as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per hour and pound of coating solids as applied in the performance test report required by Minn. R. 7017.2035, subp. 1. The transfer efficiency for PM < 10 micron used for calculating emissions shall be re-set to the 3-hour average transfer efficiency in pound PM10 per pound of coating solids as applied, measured during the most recent MPCA-approved emission factor performance test. The new transfer efficiency for PM < 10 micron: used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subp. 2(A) & (B) , Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.4.12	Transfer efficiency for PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Transfer efficiency for PM < 10 micron Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]
5.4.13	Transfer efficiency for PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If

Commented [A70]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Requirement number	Requirement and citation
	the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.4.14	Transfer efficiency for PM < 2.5 micron: Protocol for Re-Setting the Transfer efficiency Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission rates in pound PM2.5 per hour and transfer efficiency in pound PM2.5 per pound of solids (as applied) as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per hour and pound of coating solids as applied in the performance test report required by Minn. R. 7017.2035, subp. 1. The transfer efficiency for PM < 2.5 micron used for calculating emissions shall be re-set to the 3-hour average transfer efficiency in pound PM2.5 per pound of coating solids as applied, measured during the most recent MPCA-approved emission factor performance test. The new transfer efficiency for PM < 2.5 micron: used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.4.15	Transfer efficiency for PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Transfer efficiency for PM < 2.5 micron Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]
5.4.16	Transfer efficiency for PM < 2.5 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
COMG 5	**Permanent Total Enclosure Requirements: Coating Rooms**
5.5.1	The Permittee shall limit Coating Room Pressure Drop <= -0.007 inches of water, as established in Method 204 of appendix M to 40 CFR part 51. Pressure drop across the established enclosure shall be monitored at all times as described elsewhere in this permit. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.5.2	The Permittee shall vent emissions from each EQUI subject to COMG 5 requirements to a stack/vent meeting the requirements of STRU 73 whenever each EQUI in COMG 5 operates. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.5.3	The Permittee shall operate and maintain each individual coating room the North Building as permanent total enclosures that meet the criteria of Method 204 of appendix M, 40 CFR pt. 51. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.5.4	Coating Room Pressure Drop Continuous Monitoring Devices: The Permittee shall install, operate, and maintain a pressure drop monitoring system (pressure drop gauge EQUI 169, EQUI 170 and EQUI 171 and building management system EQUI 168) for each enclosure meeting the following requirements and maintain records of compliance with these requirements: (1) Complete a minimum of one cycle of operation for each successive 15-minute period having a minimum of four equally spaced successive cycles of CPMS operation in one hour; (2) Determine the average of all recorded readings for each successive 3-hour period of the emission capture system and add-on control device operation; (3) Record the results of each inspection, calibration, and validation check of the pressure drop gauge;

Commented [A71]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A72]: The facility is not subject to 40 CFR 63 subp. MMMM and should not be required to meet the requirements of that NESHAP. Documentation provided for maintaining any negative pressure is sufficient.

Commented [A73]: The facility is not subject to 40 CFR 63 subp. MMMM and should not be required to meet the requirements of that NESHAP.

Requirement number	Requirement and citation
	(4) Maintain the pressure drop gauge at all times and have available necessary parts for routine repairs of the monitoring equipment; (5) Operate the pressure drop gauge and collect pressure drop data at all times that a coating operation is operating, except during monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, if applicable, calibration checks and required zero and span adjustments); (6) Do not use data recorded during monitoring malfunctions, associated repairs, out-of-control periods, or required quality assurance or control activities when calculating data averages. Use all the data collected during all other periods in calculating the data averages for determining compliance with the emission capture system and add-on control device operating limits; (7) Locate the pressure drop gauge(s) in or as close to a position that provides a representative measurement of the pressure drop across each monitored enclosure (each coating room); (8) Use a pressure drop gauge with an accuracy of at least five percent of the minimum pressure drop to be maintained. (9) Perform an initial calibration of the pressure drop gauge according to the manufacturer''s requirements; (10) Conduct a validation check before initial operation or upon relocation or replacement of a pressure drop gauge. Validation checks include comparison of pressure drop gauge values to calibrated pressure measurement devices or to pressure simulation using calibrated pressure sources; (11) Conduct accuracy audits every quarter and after every deviation. Accuracy audits include comparison of pressure drop gauge values to calibrated pressure measurement devices or to pressure simulation using calibrated pressure sources; (12) Perform monthly leak checks on pressure connections. A pressure of at least 1.0 inches of water column to the connection must yield a stable sensor result for at least 15 seconds; and (13) Perform a visual inspection of the pressure drop gauge at least monthly if there is no redundant pressure drop gauge. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.5.5	Coating Room Pressure Alarm: The Permittee shall install, operate, and maintain an alarm that triggers when the pressure drop set point is exceeded. The set point at which the alarm triggers shall be set such that the alarm sounds when the pressure drop limit established in this permit is not met. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.5.6	Coating Room Airflow Direction: The Permittee shall maintain airflow into the Coating Room enclosure at all times. If airflow into the enclosure is not maintained, coating operations in the Coating Room shall be shut down until airflow direction into the enclosure is restored and shall be reported as a deviation. The Permittee shall document and keep records of all deviations, including the date of malfunction, steps taken to restore airflow direction into the enclosure, and the date operation continued. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]
5.5.7	Coating Room Negative Pressure Monitoring: ~~The Permittee shall continuously monitor the pressure drop across the enclosure of each coating room established during the most recent performance test following Method 204 of appendix M to 40 CFR Part 51~~. If it is discovered that negative pressure is not being maintained, either by inspection or the alarm is sounded, coating operations in the coating room shall be shut down until a negative pressure state is restored. Each violation of the pressure drop limit shall be reported as a deviation. The Permittee shall document and keep records of all deviations, including the date of malfunction, steps taken to restore the minimum negative pressure, and the date operation continued. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3]

Commented [A74]: The facility is not subject to 40 CFR 63 subp. MMMM and should not be required to meet the standards of that NESHAP.

Requirement number	Requirement and citation
5.5.8	The Permittee shall install and maintain a Retro-Coat Vapor Intrusion System on the floor surfaces of each coating room in COMG 5 where t-DCE VOC coaters operate. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. Stat. 116.385, subd. 3]
5.5.9	Daily Inspection: On each day of operation, the Permittee shall inspect the floor of each coating room where t-DCE VOC coaters operate to check for degradation of the Retro-Coat Vapor Intrusion Coating System and do the following (where applicable): 1) If degradation is discovered, the Permittee shall immediately resolve the degradation. 2) If the degradation is not resolved within 24 hours, the Permittee shall immediately cease VOC-coating operations in that coating room until the degradation is corrected. 3) Notify the MPCA immediately upon ceasing VOC coating operations due to degradation on the Retro-Coat Vapor Intrusion System. 4) Photographs of all degradation areas shall be taken before and after corrective actions are taken. Photographs shall be retained in Facility records. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. Stat. 116.385, subd. 3]
5.5.10	Daily Inspection: On each day of operation, the Permittee shall inspect the and record the door status and verify the alarm system is operating with a set point at a minimum pressure drop of 0.007 inches of water for each coating room. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
COMG 6	**Indirect Heating Equipment Rule Requirements**
5.6.1	Filterable Particulate Matter <= 0.40 pounds per million Btu heat input. The potential to emit from the unit is 0.0076 lb/MMBtu due to equipment design and allowable fuels. This limit applies individually to each unit in COMG 6. [Minn. R. 7011.0515, subp. 1]
5.6.2	Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 60 percent opacity. [Minn. R. 7011.0515, subp. 2]
5.6.3	Fuel type: Natural gas only, by design. [Minn. R. 7005.0100, subp. 35a]
5.6.4	The Permittee shall keep records of fuel purchases showing fuel types. For the purpose of reporting emissions to the annual emission inventory. [Minn. R. 7007.0800, subp. 5, Minn. R. 7019.3000- 7019.3100]
COMG 7	**Industrial Process Equipment Rule Requirements**
5.7.1	Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. This limit applies individually to each unit in COMG 7. [Minn. R. 7011.0715, subp. 1(A)]
5.7.2	Opacity <= 20 percent opacity. This limit applies individually to each unit in COMG 7. [Minn. R. 7011.0715, subp. 1(B)]
COMG 8	**PM10 and PM2.5: Limits and Compliance Requirements for Water-Based Spray Battery Terminal Post Coaters**
5.8.1	The Permittee shall install, operate and maintain each water-based spray battery terminal post coater subject to COMG 8 requirements inside a coating room meeting the requirements of COMG 5. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.8.2	The Permittee shall vent emissions from each water-based spray battery terminal post coater subject to COMG 8 requirements to control equipment meeting the requirements of COMG 14 whenever each water-based spray battery terminal post coater operates. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.8.3	Water-based Spray Battery Terminal Post Coater operated at the facility is subject to the requirements in COMG 1. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]

Commented [A75]: Permit requirements for coating floor inspections should be consistent with the floor management plan.

Commented [A76]: Not needed: as stated in 5.6.3, fuel type is natural gas only by design.

Commented [A77]: The coaters in COMG 8 are the same as those in COMG 4. They do not need separate groups and separate (similar) requirements: the requirements could be on the EQUI level. See other comments from COMG 4.

Requirement number	Requirement and citation
5.8.4	The Permittee is prohibited from using any coating that contains any hazardous air pollutant (HAP), including the target HAPs as defined under 40 CFR Section 63.11180. [Minn. R. 7007.0800, subp. 2(A)]
5.8.5	Daily Recordkeeping. On each day of operation, the Permittee shall calculate, record, and maintain a record of the total quantity of each coating and other solids-containing material, including the solids content of each coating (as a mass fraction), used by each coater in COMG 8. This shall be based on written usage logs. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.8.6	Particulate Matter: Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate, record, and maintain a record of the following for the previous operating day using the daily usage records: 1) Total weight of water-based coating used by each unit in COMG 8, in pounds/day; and 2) Daily average hourly emissions of PM10 and PM2.5 from all water-based coaters in COMG 8 as determined elsewhere in this permit, in pounds/hour. This record shall also include solids contents of each material as determined by the Material Content requirement of this permit. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.8.7	PM < 10 micron: Daily Calculations. The Permittee shall calculate PM10 emissions from COMG 8 using the following equations: PM10WB = TPM10WB/24 TPM10WB = [(IWB1 x JWB1) + (IWB2 x JWB2) + (IWB3 x JWB3)] x (1-TE) x (1-CE1) where: PM10WB = daily average PM10 emissions from COMG 8, in pounds/hour; TPM10WB = total daily PM10 emissions from each EQUI in COMG 8, in pounds/day; IWB# = total weight of coating used in COMG 8 based on daily usage logs, in pounds/day; JWB# = solids content of coating used in IWB#, in weight percent; TE = minimum transfer efficiency allowed by the permit as of permit issuance (65 percent). Other transfer efficiencies allowed by this permit shall be based on MPCA-approved stack test results according to approved replicable methodology (ARM) requirements; and CE1 = minimum PM10 control efficiency required by COMG 14, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.8.8	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate PM2.5 emissions from COMG 8 using the following equations: PM2.5WB = TPM2.5WB/24 TPM2.5WB = [(IWB1 x JWB1) + (IWB2 x JWB2) + (IWB3 x JWB3)] x (1-TE) x (1-CE2) where: PM2.5WB = daily average PM2.5 emissions from COMG 8, in pounds/hour; TPM2.5WB = total daily PM2.5 emissions from each EQUI in COMG 8, in pounds/day; IWB# = total weight of coating used in COMG 8 based on daily usage logs, in pounds/day; JWB# = solids content of coating used in IWB#, in weight percent; TE = minimum transfer efficiency allowed by the permit as of permit issuance (65 percent). Other transfer efficiencies allowed by this permit shall be based on MPCA-approved stack test results according to approved replicable methodology (ARM) requirements; and CE2 = minimum PM2.5 control efficiency required by COMG 14, as a fraction. [Minn. R. 7007.0800, subps. 4-5]

Requirement number	Requirement and citation
5.8.9	Material Content. Solids (PM, PM<10 microns, and PM<2.5 microns) contents in coatings and other materials used in COMG 8 shall be determined by the Safety Data Sheet (SDS) or the Material Safety Data Sheet (MSDS) provided by the supplier for each material used. If a material content range is given on the SDS or the MSDS, the highest number in the range shall be used in all compliance calculations. If there is information provided in the Regulatory Section of the SDS, the highest number in the range of that section may be used. Other alternative methods approved by the MPCA may be used to determine the solids content. The Commissioner reserves the right to require the Permittee to determine the solids content of any material, according to EPA or ASTM reference methods. If an EPA or ASTM reference method is used for material content determination, the data obtained shall supersede the SDS or the MSDS. [Minn. R. 7007.0800, subp. 4-5]
5.8.10	Maximum Contents of Materials and Process Rate: The Permittee assumed certain worst-case contents of materials and process rates when determining the short-term potential to emit of units in COMG 8. These assumptions are listed in Appendix B of this permit. Increasing the process rate or changing to a material that has a higher content of any of the given pollutants, or an addition of a pollutant not listed in Appendix B, is considered a change in method of operation that must be evaluated under Minn. R. 7007.1200, subp. 3 to determine if a permit amendment or notification is required under Minn. R. 7007.1150. [Minn. R. 7005.0100, subp. 35a]
5.8.11	Transfer efficiency for PM < 10 micron: Protocol for Re-Setting the Transfer efficiency Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission rates in pound PM10 per hour and transfer efficiency in pound PM10 per pound of solids (as applied) as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per hour and pound of coating solids as applied in the performance test report required by Minn. R. 7017.2035, subp. 1. The transfer efficiency for PM < 10 micron used for calculating emissions shall be re-set to the 3-hour average transfer efficiency in pound PM10 per pound of coating solids as applied, measured during the most recent MPCA-approved emission factor performance test. The new transfer efficiency for PM < 10 micron: used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.8.12	Transfer efficiency for PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Transfer efficiency for PM < 10 micron Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]
5.8.13	Transfer efficiency for PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.8.14	Transfer efficiency for PM < 2.5 micron: Protocol for Re-Setting the Transfer efficiency Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission rates in pound PM2.5 per hour and transfer efficiency in pound PM2.5 per pound of solids (as applied) as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per hour and pound of coating solids as applied in the performance test report required by Minn. R.

Commented [A78]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A79]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Requirement number	Requirement and citation
	7017.2035, subp. 1. The transfer efficiency for PM < 2.5 micron used for calculating emissions shall be re-set to the 3-hour average transfer efficiency in pound PM2.5 per pound of coating solids as applied, measured during the most recent MPCA-approved emission factor performance test. The new transfer efficiency for PM < 2.5 micron: used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.8.15	Transfer efficiency for PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Transfer efficiency for PM < 2.5 micron Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]
5.8.16	Transfer efficiency for PM < 2.5 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
COMG 9	**Sub-Slab Vapor Mitigation System: Operation Requirements**
5.9.1	The Permittee shall vent emissions from EQUI 167 to a stack/vent meeting the requirements of STRU 41 whenever EQUI 167 operates. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.9.2	The Permittee shall operate and maintain a Sub-Slab Depressurization and Solvent Vapor Extraction system (EQUI 167), and vent emissions to two 2,000-pound granulated activated carbon (GAC) canisters connected in-series (TREA 50 and TREA 51) such that all solvent vapor emissions from beneath the facility floor are captured and vented through the remediation stack (STRU 41) following the requirements of this permit. The requirement to vent emissions from EQUI 167 to TREA 50 and 51 terminates when the MPCA Remediation Division approves the removal of TREA 50 and TREA 51 in writing. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.9.3	Sampling Locations: The Permittee shall install and maintain gas sampling ports at the following locations required by the MPCA Remediation Division. This includes but is not limited to sampling ports at the inlet side, in between and at the effluent side of the two carbon canisters controlling emissions from EQUI 167. The requirement to install and maintain gas sampling ports at these locations terminates when the MPCA Remediation Division approves the removal of TREA 50 and TREA 51 in writing. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.9.4	The Permittee shall obtain a gas sample from the Solvent Vapor Extraction system at the locations and with the frequency required by the MPCA Remediation Division. If sampling is required, the Permittee shall send each sample to a third-party analytical laboratory for analysis following EPA Method TO-15. The requirement to conduct quarterly sampling of emissions from Solvent Vapor Extraction system terminates when the MPCA Remediation Division approves the removal of TREA 50 and TREA 51 in writing. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.9.5	Sample Analytical Results Recordkeeping: If sampling and analysis is required by the MPCA Remediation Division, the Permittee shall maintain a record of the analytical test results on each required gas sample, including the date of the test and the concentration of emissions from each VOC

Commented [A80]: There need be no sub-slab mitigation system requirements in the air permit as the analysis showed no adverse impacts to emissions and no adverse health effects.

Commented [A81]: This is unnecessary and not a formal emission limit based on modeling but rather a threshold requiring changing of carbon canisters.

Commented [A82]: Testing and modeling shows the GAC is unnecessary and does not belong in the air permit. The Remediation group oversees the mitigation system operation.

Commented [A83]: This should be removed from the permit as noted above.

Requirement number	Requirement and citation
	species measured by EPA Method TO-15. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.9.6	~~1,2 (trans-) Dichloroethylene: Emissions Calculations: If required by the MPCA, the Permittee shall calculate and record emission rates of 1,2 (trans-) Dichloroethylene and of all the other chemicals analyzed by EPA Method TO-15, in pounds per day, using the following equation:~~ ~~SVR = BTi x Vrem~~ ~~Where:~~ ~~SVR = daily emissions of 1,2 (trans-) Dichloroethylene (or other chemicals analyzed by EPA Method TO-15), in pound/day;~~ ~~BTi = concentration of 1,2 (trans-) Dichloroethylene (or other chemicals analyzed by EPA Method TO-15) measured for the last required sample, in pounds/actual cubic foot; and~~ ~~Vrem = exhaust flow rate from the solvent vapor remediation stack, in standard cubic feet/day. As of permit issuance, the exhaust flow rate at the remediation stack is 695 standard cubic feet per minute (1,000,800 standard cubic feet per day). Other standard exhaust flow rates from the solvent vapor remediation stack allowed by this permit shall be based on MPCA-approved test results according to approved replicable methodology (ARM) requirements. Any subsequent standard exhaust flow rate from the solvent vapor remediation stack must be measured concurrently with the measurement of 1,2 (trans-) Dichloroethylene concentration.~~ ~~Records of the BTi value obtained for any given sample shall be made available as required by MPCA. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]~~
5.9.7	The Permittee shall operate and maintain the sub-slab depressurization and solvent vapor extraction system, and carbon canisters in COMG 9 in accordance with the Operation and Maintenance (O & M) Plan approved by the MPCA Remediation Division. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. The requirement to maintain TREA 50 and 51 terminates when the MPCA Remediation Division approves the removal of TREA 50 and TREA 51 in writing. [Minn. R. 7007.0800, subp. 14, Minn. Stat. 116.07, subd. 9(2)]
5.9.8	Carbon Canister Replacement: After 300 days of continuous service, or sooner if the manufacturer recommends replacement before 300 days of continuous service, the Permittee shall perform the following procedure: 1) Replace the lead carbon canister (first in-series) with a fresh carbon canister; 2) Move the lag carbon canister (second in-series) to the lead position; and 3) Install the new carbon canister as the lag carbon canister (second in-series). The Permittee shall keep records of the date of each canister change. The requirement for carbon canister replacement terminates when the MPCA Remediation Division approves the removal of TREA 50 and TREA 51 in writing. [Minn. R. 7007.0800, subp. 2(A), Minn. Stat. 116.07, subd. 9(2)]
5.9.9	Carbon Canister Removal. The Permittee is authorized to remove carbon canister control equipment (TREA 50 and TREA 51) upon written approval from the MPCA Remediation Division without obtaining a major permit amendment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a) & 9(2)]
5.9.10	Routine Inspections: The Permittee shall verify operation of the sub-slab vapor remediation system and visually inspect the condition of each carbon canister in COMG 9 with respect to alignment, saturation, and any other condition that may affect the filter's performance with the frequency required by MPCA Remediation Division. The Permittee shall maintain a ~~daily~~ written record of system and filter inspections. The requirement for routine inspections of carbon canisters terminates when the MPCA Remediation Division approves the removal of TREA 50 and TREA 51 in writing. [Minn. R. 7007.0800, subp. 2(A), Minn. Stat. 116.07, subd. 9(2)]

Commented [A84]: This is not needed. Delete this requirement.

Commented [A85]: Quarterly inspections to match 5.9.11 are more appropriate.

Requirement number	Requirement and citation
5.9.11	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee shall inspect the Solvent Vapor Extraction system and control equipment components. The Permittee shall maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5, Minn. Stat. 116.07, subd. 9(2)]
5.9.12	Corrective Actions: If the sub-slab depressurization and solvent vapor extraction system, carbon canister or any of their components in COMG 9 are found during the inspections to need repair, the Permittee shall take corrective action as soon as possible. Corrective actions shall include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the sub-slab depressurization and solvent vapor extraction system and carbon canisters. The Permittee shall keep a record of the type and date of any corrective action taken. The requirement for corrective actions on carbon canisters terminates when the MPCA Remediation Division approves the removal of TREA 50 and TREA 51 in writing. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5, Minn. Stat. 116.07, subd. 9(2)]
5.9.13	Protocol for Resetting the Standard Exhaust Flow Rate from the Solvent Vapor Remediation Stack: The Permittee may conduct performance testing to measure the standard exhaust flow rate and temperature from the solvent vapor remediation stack as allowed elsewhere in this permit. If the established standard exhaust flow rate from the solvent vapor remediation stack are to be reset, the reset shall be based on the standard exhaust flow rate from the solvent vapor remediation stack values recorded during the most recent MPCA-approved performance test where compliance with applicable emission limits was demonstrated. The established standard exhaust flow rate from the solvent vapor remediation stack shall be reset as follows: - if the highest standard exhaust flow rate recorded during the test are higher than the respective established standard exhaust flow rate, it shall be reset to the highest standard exhaust flow rate resulting from the test; or - if the highest standard exhaust flow rate recorded during the test are lower than the respective established emission factor, it shall be reset to the highest standard exhaust flow rate resulting from the test. The new standard exhaust flow rate shall be effective upon receipt of the Notice of Compliance letter that approves the test results and shall be incorporated into the permit when the permit is next amended. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.9.14	~~The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting Standard Exhaust Flow Rate allowed by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.9.15	Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the Notice of Compliance letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.9.16	The Permittee shall operate EQUI 167 meeting the requirements of COMG 1. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
COMG 10	**NOx: North Building Space Heating Capacity and Operation Limits**

Commented [A86]: Permittee must submit an approvable test plan, not a major permit amendment.

Requirement number	Requirement and citation
5.10.1	The Permittee shall limit emissions of PM < 10 micron <= 0.07966 pounds per hour 3-hour average. This is the emission rate used in modeling and it represents uncontrolled emissions at process capacity. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.10.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.07966 pounds per hour 3-hour average. This is the emission rate used in modeling and it represents uncontrolled emissions at process capacity. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.10.3	The Permittee shall limit emissions of Nitrogen Oxides <= 1.0482 pounds per hour 3-hour average. This is the emission rate used in modeling and it represents uncontrolled emissions at process capacity. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.10.4	The Permittee shall limit emissions of Lead <= 0.000005 pounds per hour 3-hour average. This is the emission rate used in modeling and it represents uncontrolled emissions at process capacity. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.10.5	The Permittee shall limit total maximum Heat Input <= 10.69 million Btu per hour. This limit applies to the combined heat input of all the space heating units in COMG 10 located in the North Building (STRU 38). If the Permittee replaces any existing direct heating equipment, adds new direct heating equipment, or modifies the existing equipment, such equipment is subject to this permit limit as well as all of the requirements in COMG 10. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. The Permittee is not required to complete emissions calculations described in Minn. R. 7007.1200, subp. 2. A permit amendment will still be needed regardless of the emissions increase if the change will be subject to a new applicable requirement or requires revisions to the limits or monitoring and recordkeeping in this permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.10.6	The Permittee shall keep an inventory of combustion units operating in the North Building (STRU 38), including manufacturer, model number, maximum-rated heat input capacity, in million British Thermal Units per hour, and location of the combustion unit. These records shall be kept up-to-date and available for inspection. [Minn. R. 7007.0800, subp. 5]
5.10.7	The Permittee shall not operate the space heating equipment during the months of June, July and August. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.10.8	Daily Recordkeeping. On each day of operation, the Permittee shall record the space heaters operating in the North Building (STRU 38). [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
COMG 11	**Nederman Filter and Smog Hog Control Equipment Train - Melt Pots**
5.11.1	The Permittee shall operate and maintain in-series control equipment train such that it achieves an overall control efficiency for Particulate Matter >= 97.0 percent control efficiency. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.11.2	The Permittee shall operate and maintain in-series control equipment train such that it achieves an overall control efficiency for PM < 10 micron >= 97.0 percent control efficiency. [Minn. R. 7007.0080, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.11.3	The Permittee shall operate and maintain in-series control equipment train such that it achieves an overall control efficiency for PM < 2.5 micron >= 97.0 percent control efficiency. [Minn. R. 7007.0800,

Requirement number	Requirement and citation
	subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.11.4	The Permittee shall operate and maintain in-series control equipment train such that it achieves an overall control efficiency for Lead >= 86.0 percent control efficiency. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.11.5	The Permittee shall vent emissions from EQUIs 101, 102, 103, 104, and 221 to an in-series control equipment train meeting the permit requirements under COMG 11. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.11.6	If the Permittee replaces any control equipment unit subject to the requirements in COMG 11, the replacement in-series control equipment train must meet or exceed the control efficiency requirements for COMG 11 as well as comply with all other requirements of COMG 11. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.11.7	The Permittee shall operate and maintain each control equipment train in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.11.8	Daily Inspections: Once each operating day, the Permittee shall visually inspect the condition of each control equipment train with respect to any other condition that may affect the control equipment train's performance. The Permittee shall maintain a daily written record of these inspections. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, sub. 4a(a)]
5.11.9	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee shall inspect the control equipment train components. The Permittee shall maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4 & 5]
5.11.10	Corrective Actions: If the control equipment train or any of their components are found during the inspections to need repair, the Permittee shall take corrective action as soon as possible. Corrective actions shall include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan. The Permittee shall keep a record of the type and date of any corrective action taken. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4 & 5]
5.11.11	Daily Monitoring: The Permittee shall physically verify the operation of the Continuous Parameter Monitoring System (CPMS) for each Smog Hog in COMG 11 at least once each operating day to verify that it is working and recording properly. The Permittee shall maintain a written record of the daily. [Minn. R. 7007.0800, subps. 4-5]
5.11.12	~~Data Collection: The Permittee shall maintain a continuous hard copy readout or computer disk file that shows the On/Off condition of each Smog Hog at all times. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]~~
5.11.13	Quarterly Inspections: At least once per calendar quarter, or more frequently if required by the manufacturer of the smog hogs, the Permittee shall inspect the control equipment components that are subject to wear or plugging, for example: bearings, belts, hoses, fans, nozzles, orifices, and ducts.

Commented [A87]: Same comment as for 5.14.6 and 5.14.7. No set frequency for opening the Nederman filter units for inspection.

Commented [A88]: Same comment as for 5.14.6 and 5.14.7. No set frequency for opening the Nederman filter units for inspection.

Commented [A89]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Requirement number	Requirement and citation
	The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
~~5.11.14~~	~~Monitoring Equipment: The Permittee must install and maintain a continuous parameter monitoring system (CPMS) for monitoring the Smog Hog On/Off condition as required by this permit. The monitoring equipment must be installed, in use, and properly maintained, including maintaining the necessary parts for routine repairs of the monitoring equipment, whenever operation of the monitored control equipment is required. [Minn. R. 7007.0800, subps. 4-5]~~
5.11.15	Annual Inspections: At least once per calendar year, or more frequently if required by the manufacturer, the Permittee shall inspect the Smog Hog components not covered by the quarterly inspections. This includes, but is not limited to, components that are not subject to wear or plugging including structural components, housings, and hoods. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.11.16	Pre-Filter and Cell Maintenance for Smog Hogs: The Permittee shall transport pre-filters and cells properly ~~in leak-proof containers~~ during cleaning, replacement, or performing other maintenance. The Permittee shall dispose of all lead-soiled materials including, but not limited to, dishwasher wastewater, mop heads, rags, personal protective equipment (PPE), vacuum bags, and any other material soiled or otherwise in contact with lead as hazardous waste. [Minn. R. 7007.0800, subp. 2, Minn. R. ch. 7045]
5.11.17	Corrective Actions for smog hogs: The Permittee shall take corrective action as soon as possible if any of the following occur: - any recorded operating parameter is outside the required operating range; or - the Smog Hog or any of its components are found during the inspections to need repair. Corrective actions shall return operation to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O&M Plan for the Smog Hog. The Permittee shall keep a record of the type and date of any corrective action taken for the Smog Hog. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
COMG 12	**Nederman Filter and Smog Hog Control Equipment Train - Die Casting**
5.12.1	The Permittee shall operate and maintain in-series control equipment train such that it achieves an overall control efficiency for Particulate Matter >= 86.6 percent control efficiency. [Minn. R. 7007.0800, subp. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.12.2	The Permittee shall operate and maintain in-series control equipment train such that it achieves an overall control efficiency for PM < 10 micron >= 86.6 percent control efficiency. [Minn. R. 7007.0800, subp. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.12.3	The Permittee shall operate and maintain in-series control equipment train such that it achieves an overall control efficiency for PM < 2.5 micron >= 86.6 percent control efficiency. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.12.4	The Permittee shall vent emissions from EQUIs 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 146, 147, 149, 150, 152, 153, 154, 155, 156, 157, and 158 to an in-series control equipment train meeting the permit requirements under COMG 12. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.12.5	If the Permittee replaces any control equipment unit subject to the requirements of COMG 12, the replacement in-series control equipment train must meet or exceed the control efficiency requirements for COMG 12 as well as comply with all other requirements of COMG 12. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment,

Commented [A90]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Commented [A91]: Leak-proof containers are not necessary to protect employee or public health.

Requirement number	Requirement and citation
	as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.12.6	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the Nederman filter manufacturer's specifications, the Permittee shall inspect the control equipment train components. The Permittee shall maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4 & 5]
5.12.7	The Permittee shall operate and maintain each control equipment train in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.12.8	Daily Inspections: Once each operating day, the Permittee shall visually inspect the condition of each control equipment train with respect to any other condition that may affect the control equipment train's performance. The Permittee shall maintain a daily written record of these inspections. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.12.9	Corrective Actions: If the control equipment train or any of their components are found during the inspections to need repair, the Permittee shall take corrective action as soon as possible. Corrective actions shall include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan. The Permittee shall keep a record of the type and date of any corrective action taken. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4 & 5]
5.12.10	Daily Monitoring: The Permittee shall physically verify the operation of the Continuous Parameter Monitoring System (CPMS) for each Smog Hog in COMG 11 at least once each operating day to verify that it is working and recording properly. The Permittee shall maintain a written record of the daily. [Minn. R. 7007.0800, subps. 4-5]
5.12.11	~~Data Collection: The Permittee shall maintain a continuous hard copy readout or computer disk file that shows the On/Off condition of each Smog Hog at all times. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]~~
5.12.12	Quarterly Inspections: At least once per calendar quarter, or more frequently if required by the manufacturer of the smog hogs, the Permittee shall inspect the control equipment components that are subject to wear or plugging, for example: bearings, belts, hoses, fans, nozzles, orifices, and ducts. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
5.12.13	~~Monitoring Equipment: The Permittee must install and maintain a continuous parameter monitoring system (CPMS) for monitoring the Smog Hog On/Off condition as required by this permit. The monitoring equipment must be installed, in use, and properly maintained, including maintaining the necessary parts for routine repairs of the monitoring equipment, whenever operation of the monitored control equipment is required. [Minn. R. 7007.0800, subps. 4-5]~~
5.12.14	Annual Inspections: At least once per calendar year, or more frequently if required by the manufacturer, the Permittee shall inspect the Smog Hog components not covered by the quarterly inspections. This includes, but is not limited to, components that are not subject to wear or plugging including structural components, housings, and hoods. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]

Commented [A92]: Same comment as for 5.14.6 and 5.14.7. No set frequency for opening the Nederman filter units for inspection.

Commented [A93]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Commented [A94]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Requirement number	Requirement and citation
5.12.15	Pre-Filter and Cell Maintenance for Smog Hogs: The Permittee shall transport pre-filters and cells ~~in leak-proof containers~~properly during cleaning, replacement, or performing other maintenance. The Permittee shall dispose of all lead-soiled materials including, but not limited to, dishwasher wastewater, mop heads, rags, personal protective equipment (PPE), vacuum bags, and any other material soiled or otherwise in contact with lead as hazardous waste. [Minn. R. 7007.0800, subp. 2, Minn. R. ch. 7045]
5.12.16	Corrective Actions for smog hogs: The Permittee shall take corrective action as soon as possible if any of the following occur: - any recorded operating parameter is outside the required operating range; or - the Smog Hog or any of its components are found during the inspections to need repair. Corrective actions shall return operation to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O&M Plan for the Smog Hog. The Permittee shall keep a record of the type and date of any corrective action taken for the Smog Hog. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subps. 4-5]
COMG 13	**Direct Heating Equipment Rule Requirements**
5.13.1	The Permittee shall limit Particulate Matter <= 0.30 grains per dry standard cubic foot of exhaust gas unless required to further reduce emissions to comply with the less stringent limit of either Minn. R. 7011.0730 or Minn. R. 7011.0735. This limit applies to each individual unit in COMG 13. [Minn. R. 7011.0610, subp. 1(A)(1)]
5.13.2	The Permittee shall limit Opacity <= 20 percent opacity except for one six-minute period per hour of not more than 60 percent opacity. This limit applies to each individual unit in COMG 13. [Minn. R. 7011.0610, subp. 1(A)(2)]
5.13.3	Fuel type: Natural gas only, by design. [Minn. R. 7005.0100, subp. 35a]
5.13.4	The Permittee shall keep records of fuel purchases showing fuel types. [Minn. R. 7007.0800, subp. 5]
COMG 14	**HEPA Filters - Spray Coaters**
5.14.1	The Permittee shall operate and maintain each piece of control equipment in this group such that it achieves a control efficiency for Particulate Matter >= 99.0 percent control efficiency. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.14.2	The Permittee shall operate and maintain each piece of control equipment in this group such that it achieves a control efficiency for PM < 10 micron >= 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.14.3	The Permittee shall operate and maintain each piece of control equipment in this group such that it achieves a control efficiency for PM < 2.5 micron >= 99.0 percent control efficiency. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.14.4	The Permittee shall operate and maintain the HEPA filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.14.5	If the Permittee replaces any HEPA filter subject to COMG 14 requirements, the replacement control must meet or exceed the control efficiency requirements of COMG 14 as well as comply with all other requirements of COMG 14. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-

Commented [A95]: Leak-proof containers are not necessary to protect employee or public health.

Requirement number	Requirement and citation
	7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.14.6	Daily Inspections: Once each operating day, the Permittee shall visually inspect the condition of each HEPA filter with respect to alignment, saturation, tears, holes and any other condition that may affect the filter's performance. The Permittee shall maintain a daily written record of filter inspections. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.14.7	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee shall inspect the control equipment components. The Permittee shall maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.14.8	Corrective Actions: If the filters or any of their components are found during the inspections to need repair, the Permittee shall take corrective action as soon as possible. Corrective actions shall include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
COMG 15	**NOx: South Building Space Heating Capacity and Operation Limits**
5.15.1	The Permittee shall limit emissions of PM < 10 micron <= 0.0171 pounds per hour 3-hour average. This is the emission rate used in modeling and it represents uncontrolled emissions at process capacity. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.15.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.0171 pounds per hour 3-hour average. This is the emission rate used in modeling and it represents uncontrolled emissions at process capacity. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.15.3	The Permittee shall limit emissions of Nitrogen Oxides <= 0.2248 pounds per hour 3-hour average. This is the emission rate used in modeling and it represents uncontrolled emissions at process capacity. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.15.4	The Permittee shall limit emissions of Lead <= 0.000001 pounds per hour 3-hour average. This is the emission rate used in modeling and it represents uncontrolled emissions at process capacity. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.15.5	The Permittee shall limit total maximum Heat Input <= 2.29 million Btu per hour. This limit applies to the combined heat input of all space heating units in COMG 15 located in the South Building (STRU 42). If the Permittee replaces any existing direct heating equipment, adds new direct heating equipment, or modifies the existing equipment, such equipment is subject to this permit limit as well as all of the requirements in COMG 15. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. The Permittee is not required to complete emissions calculations described in Minn. R. 7007.1200, subp. 2. A permit amendment will still be needed regardless of the emissions increase if the change will be subject to a new applicable requirement or requires revisions to the limits or monitoring and recordkeeping in this permit. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.15.6	The Permittee shall keep an inventory of combustion units in the South Building (STRU 42), including manufacturer, model number, maximum-rated heat input capacity, in million British Thermal Units per hour, and location of the combustion unit. The Permittee shall update the list to include any replaced, modified, or new equipment prior to making the change. The list shall correlate the units to

Commented [A96]: Water Gremlin has elected to use Nederman HEPA filters for the COMG 14 filter requirement. Similar changes are requested here as were granted for Nederman units on Diecast and Melt Pot operations. As per the Nederman recommendation, daily inspections should verify if the pressure drop reading is within the red or green areas of the gauge. The filters are not meant for frequent physical inspections, and daily door openings may damage the filters. Further, opening the doors will impact capture efficiency. See letter from the supplier dated August 18, 2022.

Commented [A97]: Same comment as for 5.14.6. Manufacturer does not recommend opening the Nederman filter units for inspection on any particular frequency.

Requirement number	Requirement and citation
	the Subject Item numbers used in this permit and shall include the data on GI-04, GI-05B, GI-05C, and GI-05F. The date of construction shall be the date the change was made for replaced, modified, or new equipment. The list shall correlate the units to the Subject Item numbers used in this permit and shall include the data on GI-04, GI-05B, GI-05C, and GI-05F. The date of construction shall be the date the change was made for replaced, modified, or new equipment. [Minn. R. 7007.0800, subp. 2(A)]
5.15.7	The Permittee shall not operate the space heating equipment during the months of June, July and August. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.15.8	Daily Recordkeeping. On each day of operation, the Permittee shall record the space heaters operating in the South Building (STRU 42). [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
COMG 16	**Die Casting Annual Throughput and Lead Emission Limits**
5.16.1	The Permittee shall limit Process Throughput <= 39,355.50 tons per year 365-day rolling sum. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.16.2	The Permittee shall limit captured and controlled emissions of Lead <= 48.21 pounds per year 365-day rolling sum to be calculated each operating day for the previous 365-day period as described later in this permit. This limit applies to captured and controlled lead emissions from all EQUIs in COMG 16. The captured and controlled emissions from each EQUI in COMG 16 are the stack lead emissions calculated at each corresponding EQUI stack by using the controlled lead emission factor listed in Appendix D. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.16.3	The Permittee shall limit uncaptured emissions of Lead <= 8.46 pounds per year 365-day rolling sum to be calculated each operating day for the previous 365-day period as described later in this permit. This limit applies to uncaptured lead emissions from all EQUIs in COMG16. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.16.4	Process Throughput: Daily Recordkeeping. By 4:30 pm on each day of operation, the Permittee shall measure or calculate, record, and maintain a record of the following for the previous operating day: 1) the total weight of each lead-containing material processed by all EQUIs in COMG 16. This shall be based on written usage logs; and 2) total process throughput from all EQUIs in COMG 16 for the previous 365-day period by calculating the total process throughput for the previous 365 days. [Minn. R. 7007.0800, subps. 2(A) &2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.16.5	Lead: Captured and Controlled Emissions: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) total captured and controlled lead emissions from all EQUIs in COMG 16 for the previous operating day. The captured and controlled emissions for each EQUI in COMG 16 must be calculated using formulas specified in this permit; and 2) 365-day rolling sum annual captured and controlled lead emissions emitted through each STRU to which from each EQUI in COMG 16 vents for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.16.6	Lead: Uncaptured Emissions: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) total uncaptured lead emissions from all EQUIs in COMG 16 for the previous operating day. The uncontrolled emissions for each EQUI in COMG 16 must be calculated using formulas specified in this permit, and

Requirement number	Requirement and citation
	2) 365-day rolling sum annual uncaptured lead emissions emitted through each STRU to which from each EQUI in COMG 16 vents for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.16.7	Captured and Controlled Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from COMG 16 using the following equations: COMG16CL = STRU15L365S + STRU16L365S + STRU17L365S + STRU74L365S + STRU20L365S + STRU75L365S + STRU23L365S + STRU24L365S + STRU25L365S + STRU26L365S + STRU30L365S + STRU31L365S + STRU32L365S + STRU33L365S = STRU34L365S + STRU35L365S where: COMG16CL = 365-day rolling sum captured and controlled lead emissions emitted from all EQUIs in COMG 16 for the previous 365-day period, in pounds/year; and STRU#L365S = 365-day rolling sum captured and controlled lead emissions emitted through the STRU# to which each EQUI in COMG 16 vents for the previous 365-day period, in pounds/year. [Minn. R. 7007.0800, subps. 4-5]
5.16.8	Uncaptured Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual uncaptured lead emissions from COMG 16 using the following equations: COMG16UL = STRU43L365S + STRU44L365S + STRU45L365S + STRU46L365S + STRU47L365S + STRU48L365S + STRU49L365S + STRU50L365S + STRU51L365S + STRU52L365S + STRU53L365S + STRU56L365S where: COMG16UL = 365-day rolling sum uncaptured lead emissions emitted from all EQUIs in COMG 16 for the previous 365-day period, in pounds/year; and STRU#L365S = 365-day rolling sum uncaptured lead emissions emitted through the STRU# to which each EQUI in COMG 16 vents for the previous 365-day period, in pounds/year. [Minn. R. 7007.0800, subps. 4-5]
EQUI 82	**Battery Terminal Post Coater 6**
5.17.1	At the time of permit issuance, EQUI 82 is a UV spray coater as described in Appendix B of this permit and shall comply with the requirements under COMG 1 and COMG 5. EQUI 82 shall comply with the requirements under COMG 2 except for the condition to operate with control equipment meeting the requirements in COMG 14. EQUI 82 may be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subp. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 84	**Battery Terminal Post Coater 9**
5.18.1	At the time of permit issuance, EQUI 84 is a UV spray coater as described in Appendix B of this permit and shall comply with the requirements under COMG 1, COMG 2, and COMG 5. EQUI 84 may be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000]
5.18.2	The Permittee shall vent emissions from EQUI 84 to control equipment meeting the requirements of TREA 55 whenever EQUI 84 operates. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 85	**Battery Terminal Post Coater 10**
5.19.1	At the time of permit issuance, EQUI 85 is a water-based drip coater as described in Appendix B of this permit and it exhausts emissions through STRU 73. EQUI 85 shall comply with the requirements under

Requirement number	Requirement and citation
	COMG 1 and COMG 5. Compliance with COMG 5 is required for as long as EQUI 85 exhausts emissions through STRU 73. EQUI 85 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 87	**Battery Terminal Post Coater 12**
5.20.1	At the time of permit issuance, EQUI 87 is a VOC dip coater as described in Appendix B of this permit and shall comply with the requirements under COMG 1 and COMG 5. EQUI 87 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000]
EQUI 88	**Battery Terminal Post Coater 15**
5.21.1	At the time of permit issuance, EQUI 88 is a VOC or water-based drip/spray coater as described in Appendix B of this permit and shall comply with requirements under COMG 1, COMG 4 when operating with VOC coatings. EQUI 88 shall comply with requirements under COMG 1, COMG 5, and COMG 8 when operating with water-based coating. EQUI 88 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.21.2	The Permittee shall vent emissions from EQUI 88 to control equipment meeting the requirements of TREA 56 whenever EQUI 88 operates. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 89	**Battery Terminal Post Coater 17**
5.22.1	At the time of permit issuance, EQUI 89 is a water-based dip coater as described in Appendix B of this permit and it exhausts emissions through STRU 73. EQUI 89 shall comply with requirements under COMG 1 and COMG 5. Compliance with COMG 5 is required for as long as EQUI 89 exhausts emissions through STRU 73. EQUI 89 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 92	**Battery Terminal Post Coater 20**
5.23.1	At the time of permit issuance, EQUI 92 is a water-based dip coater as described in Appendix B of this permit and it exhausts emissions through STRU 73. EQUI 92 shall comply with requirements under COMG 1 and COMG 5. Compliance with COMG 5 is required for as long as EQUI 92 exhausts emissions through STRU 73. EQUI 92 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000]
EQUI 93	**Battery Terminal Post Coater 21**
5.24.1	At the time of permit issuance, EQUI 93 is a VOC or water-based dip coater as described in Appendix B of this permit and shall comply with requirements under COMG 1 and COMG 5. EQUI 93 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 94	**Battery Terminal Post Coater 22**
5.25.1	At the time of permit issuance, EQUI 94 is a VOC or water-based drip coater as described in Appendix B of this permit and shall comply with requirements under COMG 1 and COMG 5. EQUI 94 may only

Requirement number	Requirement and citation
	be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R, 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 95	**Battery Terminal Post Coater 23**
5.26.1	At the time of permit issuance, EQUI 95 is a VOC or water-based spray coater as described in Appendix B of this permit. EQUI 95 shall comply with requirements under COMG 1, COMG 4 and COMG 5 when operating with VOC coating. EQUI 95 shall comply with requirements under COMG 1, COMG 5, and COMG 8 when operating with water-based coating. EQUI 95 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.26.2	The Permittee shall vent emissions from EQUI 95 to control equipment meeting the requirements of TREA 57 whenever EQUI 95 operates. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 97	**Battery Terminal Post Coater 25**
5.27.1	At the time of permit issuance, EQUI 97 is a water-based dip coater as described in Appendix B of this permit and it exhausts emissions through STRU 73. EQUI 97 shall comply with requirements under COMG 1 and COMG 5. Compliance with COMG 5 is required for as long as EQUI 97 exhausts emissions through STRU 73. EQUI 97 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 98	**Battery Terminal Post Coater 26**
5.28.1	At the time of permit issuance, EQUI 98 is a VOC or water-based drip coater as described in Appendix B of this permit and shall comply with requirements under COMG 1 and COMG 5. EQUI 98 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 99	**Battery Terminal Post Coater 27**
5.29.1	At the time of permit issuance, EQUI 99 is a VOC or water-based dip coater as described in Appendix B of this permit and shall comply with requirements under COMG 1 and COMG 5. EQUI 99 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 100	**Battery Terminal Post Coater 28**
5.30.1	At the time of permit issuance, EQUI 100 is a VOC or water-based drip coater as described in Appendix B of this permit and shall comply with requirements under COMG 1 and COMG 5. EQUI 100 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 101	**CF Scrap Re-Melt Pot**

Requirement number	Requirement and citation
5.31.1	The Permittee must limit Process Throughput <= 2180.0 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.31.2	Process Throughput: Daily Recordkeeping. On each day of operation, the Permittee shall calculate, record, and maintain a record of the total weight of each lead-containing material processed by EQUI 101. This shall be based on written usage logs. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.31.3	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 101 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.31.4	Lead: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 101 in the previous operating day using the daily usage records; and 2) The total lead emissions for the previous operating day using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.31.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equation: EQUI101PM10 = [A x B x (1-CE1)] / 24 Where: EQUI101PM10 = daily average PM10 emissions from EQUI 101, in pounds/hour; A = total weight of lead-containing material processed by EQUI 101 for the previous operating day, in pounds/day; and B = uncontrolled PM10 emission factor for EQUI 101 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 11, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.31.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equation: EQUI101PM2.5 = [A x C x (1-CE2)] / 24 Where: EQUI101PM2.5 = daily average PM2.5 emissions from EQUI 101, in pounds/hour; A = total weight of lead-containing material processed by EQUI 101 for the previous operating day, in pounds/day; and C = uncontrolled PM2.5 emission factor for EQUI 101 listed in Appendix D, as a fraction; and CE2 = minimum overall PM2.5 control efficiency required by COMG 11, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.31.7	Lead: Daily Calculation. The Permittee shall calculate lead emissions using the following equation: EQUI101L = D x E x (1 - CE3) Where:

Requirement number	Requirement and citation
	EQUI101L = total lead emissions from EQUI 101, in pounds/day; D = total weight of lead-containing material processed by EQUI 101 for the previous operating day, in pounds/day; and E = uncontrolled lead emission factor for EQUI 101 listed in Appendix D, as a fraction; and CE3 = minimum overall lead control efficiency required by COMG 11, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.31.8	The Permittee shall vent melt emissions from EQUI 101 to control equipment meeting the requirements of TREA 1 and TREA 60 operated in-series, and COMG 11 whenever EQUI 101 operates. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.31.9	Fuel type: Natural gas only, by design. [Minn. R. 7005.0100, subp. 35a]
5.31.10	The Permittee shall vent melt emissions from EQUI 101 to a stack/vent meeting the requirements of STRU 1 whenever EQUI 101 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.31.11	The Permittee shall vent combustion emissions from EQUI 101 to a stack/vent meeting the requirements of STRU 68 whenever EQUI 101 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.31.12	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.31.13	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.31.14	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.31.15	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate

Commented [A98]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A99]: Permittee needs an approvable test plan, not to submit a major permit application.

Commented [A100]: Allow Method 5 OR Method 201A. See previous comments on this issue.

	in pound PM2.5 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.31.16	~~PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.31.17	PM < 2.5 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.31.18	Lead: Protocol for Re-Setting the Emission Factor Used For Calculating Lead Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 12 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound lead per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound lead per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.31.19	~~Lead: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating Lead Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.31.20	Lead: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
EQUI 102	**Small Re-Melt Pot**
5.32.1	The Permittee must limit Process Throughput <= 1000.0 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.32.2	Process Throughput: Daily Recordkeeping. On each day of operation, the Permittee shall calculate, record, and maintain a record of the total weight of each lead-containing material processed by EQUI 102. This shall be based on written usage logs. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.32.3	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following:

Commented [A101]: Permittee needs an approvable test plan, not to submit a major permit application.

Commented [A102]: Permittee needs an approvable test plan, not to submit a major permit application.

Requirement number	Requirement and citation
	1) The total weight of each lead-containing material processed by EQUI 102 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.32.4	Lead: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 102 in the previous operating day using the daily usage records; and 2) The total lead emissions for the previous operating day using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.32.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equation: EQUI102PM10 = [A x B x (1-CE1)] / 24 Where: EQUI102PM10 = daily average PM10 emissions from EQUI 102, in pounds/hour; A = total weight of lead-containing material processed by EQUI 102 for the previous operating day, in pounds/day; and B = uncontrolled PM10 emission factor for EQUI 102 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 11, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.32.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equation: EQUI102PM2.5 = [A x C x (1-CE2)] / 24 Where: EQUI102PM2.5 = daily average PM2.5 emissions from EQUI 102, in pounds/hour; A = total weight of lead-containing material processed by EQUI 102 for the previous operating day, in pounds/day; and C = uncontrolled PM2.5 emission factor for EQUI 102 listed in Appendix D, as a fraction; and CE2 = minimum overall PM2.5 control efficiency required by COMG 11, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.32.7	Lead: Daily Calculation. The Permittee shall calculate lead emissions using the following equation: EQUI102L = D x E x (1 - CE3) Where: EQUI102L = total lead emissions from EQUI 102, in pounds/day; D = total weight of lead-containing material processed by EQUI 102 for the previous operating day, in pounds/day; E = uncontrolled lead emission factor for EQUI 102 listed in Appendix D, as a fraction; and CE3 = minimum overall lead control efficiency required by COMG 11, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.32.8	Fuel type: Natural gas only, by design. [Minn. R. 7005.0100, subp. 35a]
5.32.9	The Permittee shall vent melt emissions from EQUI 102 to control equipment meeting the requirements of TREA 1 and TREA 60 operated in-series, and COMG 11 whenever EQUI 102 operates.

5.32.10	The Permittee shall vent melt emissions from EQUI 102 to a stack/vent meeting the requirements of STRU 1 whenever EQUI 102 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.32.11	The Permittee shall vent combustion emissions from EQUI 102 to a stack/vent meeting the requirements of STRU 68 whenever EQUI 102 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.32.12	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.32.13	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.32.14	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.32.15	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM2.5 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.32.16	~~PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~

Commented [A103]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A104]: Permittee needs an approvable test plan, not to submit a major permit application.

Commented [A105]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A106]: Strike this: a major amendment should not be needed to propose another method for stack testing. That is what the approval of the test plan is for.

R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.34.15	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM2.5 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.34.16	~~PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.34.17	PM < 2.5 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.34.18	Lead: Protocol for Re-Setting the Emission Factor Used For Calculating Lead Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 12 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound lead per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound lead per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and

Commented [A114]: Permittee needs an approvable test plan, not to submit a major permit application.

Commented [A115]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A116]: Permittee needs an approvable test plan, not to submit a major permit application.

	shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.34.19	~~Lead: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating Lead Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.34.20	Lead: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
EQUI 113	**Tool room 1 Abrasive Blasting**
5.35.1	The Permittee is prohibited from increasing emissions of pollutants from EQUI 113 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. The Permittee shall vent emissions from EQUI 113 control equipment meeting the permit requirements of TREA 52. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.35.2	The Permittee shall vent emissions from EQUI 113 to a stack/vent meeting the requirements of STRU 57 whenever EQUI 113 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
EQUI 114	**Tool room 2 Abrasive Blasting**
5.36.1	The Permittee is prohibited from increasing emissions of pollutants from EQUI 114 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. The Permittee shall vent emissions from EQUI 114 control equipment meeting the permit requirements of TREA 53. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.36.2	The Permittee shall vent emissions from EQUI 114 to a stack/vent meeting the requirements of STRU 57 whenever EQUI 114 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
EQUI 115	**DC Abrasive Blasting**
5.37.1	The Permittee is prohibited from increasing emissions of pollutants from EQUI 115 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. The Permittee shall vent emissions from EQUI 115 control equipment meeting the permit requirements of TREA 54. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.37.2	The Permittee shall vent emissions from EQUI 115 to a stack/vent meeting the requirements of STRUs 43 and 50 whenever EQUI 115 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
EQUI 116	**Battery Terminal Post Coater 30**
5.38.1	The Permittee shall vent emissions from EQUI 116 to a stack/vent meeting the requirements of STRU 50 whenever EQUI 116 operates. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.38.2	At the time of permit issuance, EQUI 116 is a water-based dip coater as described in Appendix B of this permit and shall comply with requirements under COMG 1. EQUI 116 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]

Commented [A117]: Permittee needs an approvable test plan, not to submit a major permit application.

Requirement number	Requirement and citation
5.38.3	The Permittee shall apply water-based coating from EQUI 116 using dip or drip application methods only unless it is modified as authorized elsewhere in this permit. Spray application of coating while venting emissions to STRU 50 is prohibited. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
EQUI 117	**South Building R&D Coater**
5.39.1	The Permittee shall vent emissions from EQUI 117 to a stack/vent meeting the requirements of STRU 35 whenever EQUI 117 operates. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.39.2	At the time of permit issuance, EQUI 117 is a UV spray coater as described in Appendix B of this permit and shall comply with requirements under COMG 1. EQUI 117 shall comply with the requirements under COMG 2 except for having to comply with operating under the following conditions: 1) operate with control equipment meeting the requirements in COMG 14; and 2) operate in a coating room meeting the requirements of COMG 5. EQUI 117 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.39.3	The Permittee is prohibited from using any coating that contains any hazardous air pollutant (HAP), including the target HAPs as defined under 40 CFR Section 63.11180. [Minn. R. 7007.0800, subps. 2(A)]
5.39.4	Daily Recordkeeping. On each day of operation, the Permittee shall calculate, record, and maintain a record of the total quantity of each coating and other solids-containing material, including the solids content of each coating (as a mass fraction), used by EQUI 117 and the time of the day when EQUI 117 was in operation. This shall be based on written usage logs. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.39.5	Particulate Matter: Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate, record, and maintain a record of the following for the previous operating day using the daily usage records: 1) Total weight of UV coating used by EQUI 117, in pounds/day; and 2) Daily average hourly emissions of PM10 and PM2.5 from EQUI 117 as determined elsewhere in this permit, in pounds/hour. This record shall also include solids contents of each material as determined by the Material Content requirement of this permit. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.39.6	PM < 10 micron: The Permittee shall calculate PM10 emissions from EQUI 117 using the following equations: EQUI117PM10 = F x G where: EQUI117PM10 = daily average PM10 emissions from EQUI 117, in pounds/hour; F = total weight of coating used in EQUI 117 based on daily usage logs, in pounds/day; and G = uncontrolled PM10 emission factor, in pounds PM10 per pound of coating, listed in Appendix B, as a fraction. Other uncontrolled emission factors allowed by this permit shall be based on the most

Requirement number	Requirement and citation
	recent MPCA-approved stack test results performed according to approved replicable methodology (ARM) requirements. [Minn. R. 7007.0800, subps. 4-5]
5.39.7	PM < 2.5 micron: PM < 2.5 micron: Daily Calculations. The Permittee shall calculate PM2.5 emissions from EQUI 117 using the following equations: EQUI117PM2.5 = F x H where: EQUI117PM2.5 = daily average PM2.5 emissions from EQUI 117, in pounds/hour; F = total weight of coating used in EQUI 117 based on daily usage logs, in pounds/day; and G = uncontrolled PM2.5 emission factor, in pounds PM2.5 per pound of coating, listed in Appendix B, as a fraction. Other uncontrolled emission factors allowed by this permit shall be based on the most recent MPCA-approved stack test results performed according to approved replicable methodology (ARM) requirements. [Minn. R. 7007.0800, subps. 4-5]
5.39.8	Maximum Contents of Materials and Process Rate: The Permittee assumed certain worst-case contents of materials and process rates when determining the short term potential to emit of EQUI 117. These assumptions are listed in Appendix B of this permit. Increasing the process rate or changing to a material that has a higher content of any of the given pollutants, or an addition of a pollutant not listed in Appendix B, is considered a change in method of operation that must be evaluated under Minn. R. 7007.1200, subp. 3 to determine if a permit amendment or notification is required under Minn. R. 7007.1150. [Minn. R. 7005.0100, subps. 35a]
5.39.9	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.39.10	PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]
5.39.11	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.39.12	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1.

Commented [A118]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A119]: Allow Method 5 OR Method 201A. See previous comments on this issue.

5.39.13	PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]
5.39.14	PM < 2.5 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.39.15	The Permittee must limit the daily operation of EQUI 117 to the period between 5 am and 11 pm. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
EQUI 120	**Emergency Generator Engine**
5.40.1	The Permittee shall vent emissions from EQUI 120 to a stack/vent meeting the requirements of STRU 4 whenever EQUI 120 operates. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.40.2	The Permittee must limit emissions of NMHC+NOx <= 4.7 grams per kilowatt-hour. [40 CFR 60.4202(a)(2), 40 CFR 60.4205(b), 40 CFR 63.6590(c), Minn. R. 7011.2305]
5.40.3	The Permittee must limit emissions of Particulate Matter <= 0.40 grams per kilowatt-hour. [40 CFR 60.4202(a)(2), 40 CFR 60.4205(b), 40 CFR 63.6590(c), Minn. R. 7011.2305]
5.40.4	The Permittee must limit emissions of Carbon Monoxide <= 5.0 grams per kilowatt-hour. [40 CFR 60.4202(a)(2), 40 CFR 60.4205(b), Minn. R. 7011.2305]
5.40.5	The Permittee must limit emissions of Opacity <= 20 percent opacity during the acceleration mode. [40 CFR 60.4202(a)(2), 40 CFR 60.4205(b), 40 CFR 63.6590(c), Minn. R. 7011.2305]
5.40.6	The Permittee must limit emissions of Opacity <= 15 percent opacity during the lugging mode. [40 CFR 60.4202(a)(2), 40 CFR 60.4205(b), 40 CFR 63.6590(c), Minn. R. 7011.2305]
5.40.7	The Permittee must limit emissions of Opacity <= 50 percent opacity during the peaks in either the acceleration or lugging modes. [40 CFR 60.4202(a)(2), 40 CFR 60.4205(b), 40 CFR 63.6590(c), Minn. R. 7011.2305]
5.40.8	The Permittee must limit Sulfur Content of Fuel <= 15.0 parts per million and either a minimum cetane index of 40 or a maximum aromatic content of 35 percent by volume, as required by 40 CFR Section 80.510(b). [40 CFR 60.4207(b), 40 CFR 63.6590(c), Minn. R. 7011.2305]
5.40.9	Sulfur Dioxide <= 0.0015 pounds per million Btu heat input. The potential to emit from the unit is 0.00044 lb/MMBtu due to equipment design and allowable fuels. [Minn. R. 7011.2300, subp. 2(B)]
5.40.10	Opacity <= 20 percent opacity once operating temperatures have been attained. [Minn. R. 7011.2300, subp. 1]
5.40.11	The Permittee shall limit Non-Emergency Operating Hours <= 100 hours per year. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.40.12	On each day of operation, the Permittee shall operate EQUI 120 between the hours of 1:00pm and 4:00pm for maintenance testing. [Minn. R. 7007.0800, subp. 2(A)]

Requirement number	Requirement and citation
5.40.13	The Permittee shall keep records of fuel type and usage on a monthly basis. [Minn. R. 7007.0800, subp. 5]
5.40.14	Hours of Operation: The Permittee shall maintain documentation on site that the unit is an emergency generator by design that qualifies under the U.S. EPA memorandum entitled "Calculating Potential to Emit (PTE) for Emergency Generators" dated September 6, 1995, limiting operation to 500 hours per year. [Minn. R. 7007.0800, subps. 4-5]
5.40.15	Fuel type: No. 2 fuel oil/diesel fuel meeting the requirements of 40 CFR Section 1090.305 only by design. [40 CFR 60.4207(b), Minn. R. 7005.0100, subp. 35a]
5.40.16	Fuel Supplier Certification: The Permittee shall obtain and maintain a fuel supplier certification for each shipment of diesel fuel oil, certifying that the sulfur content does not exceed 0.0015 percent by weight. [Minn. R. 7007.0800, subps. 4-5]
5.40.17	The Permittee must comply with all applicable requirements of 40 CFR pt. 60, subp. IIII as follows: 40 CFR 60.4200(a)(2)(i); 40 CFR 60.4200(c); 40 CFR 60.4202(a)(2); 40 CFR 60.4205(b); 40 CFR 60.4207(b); 40 CFR 60.4208(a); 40 CFR 60.4209(a); 40 CFR 60.4211(a); 40 CFR 60.4211(c); 40 CFR 60.4211(f); 40 CFR 60.4214(b); 40 CFR 60.4218; 40 CFR 60.4219; and 40 CFR pt. 60, subp. IIII, Table 8. A copy of 40 CFR pt. 60, subp. IIII is included in Appendix J. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than 3 years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 60, subp. IIII, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.2305]
5.40.18	The Permittee must comply with all applicable requirements of 40 CFR pt. 60, subp. A as follows: 40 CFR 60.1(a); 40 CFR 60.1(b); 40 CFR 60.1(c); 40 CFR 60.2; 40 CFR 60.3; 40 CFR 60.4; 40 CFR 60.5(a); 40 CFR 60.5(b); 40 CFR 60.6(a); 40 CFR 60.6(b); 40 CFR 60.7(a)(1); 40 CFR 60.7(a)(3); 40 CFR 60.7(a)(4); 40 CFR 60.7(a)(5); 40 CFR 60.7(a)(6); 40 CFR 60.7(a)(7); 40 CFR 60.7(b); 40 CFR 60.7(c); 40 CFR 60.7(d); 40 CFR 60.8(a); 40 CFR 60.8(b); 40 CFR 60.8(c); 40 CFR 60.8(d); 40 CFR 60.8~~(e)~~©; 40 CFR 60.8(f); 40 CFR 60.8(g); 40 CFR 60.8(h); 40 CFR 60.8(i); 40 CFR 60.9; 40 CFR 60.11(a); 40 CFR 60.11(b); 40 CFR 60.11(c); 40 CFR 60.11(d); 40 CFR 60.11(e)(1); 40 CFR 60.11(e)(2); 40 CFR 60.11(e)(3); 40 CFR 60.11(e)(4); 40 CFR 60.11(e)(5); 40 CFR 60.11(e)(6); 40 CFR 60.11(e)(7); 40 CFR 60.11(e)(8); 40 CFR 60.11(f); 40 CFR 60.11(g); 40 CFR 60.12; 40 CFR 60.13(a); 40 CFR 60.13(b); 40 CFR 60.13(c); 40 CFR 60.13(d)(1); 40 CFR 60.13(d)(2); 40 CFR 60.13(e)(1); 40 CFR 60.13(e)(2); 40 CFR 60.13(f); 40 CFR 60.13(g); 40 CFR 60.13(h)(1); 40 CFR 60.13(h)(2); 40 CFR 60.13(h)(3); 40 CFR 60.13(i)(1); 40 CFR 60.13(i)(2); 40 CFR 60.13(i)(3); 40 CFR 60.13(i)(4); 40 CFR 60.13(i)(5); 40 CFR 60.13(i)(6); 40 CFR 60.13(i)(7); 40 CFR 60.13(i)(8); 40 CFR 60.13(i)(9); 40 CFR 60.13(j)(1); 40 CFR 60.13(j)(2); 40 CFR 60.14(a); 40 CFR 60.14(b); 40 CFR 60.14(c); 40 CFR 60.14(e); 40 CFR 60.14(f); 40 CFR 60.14(g); 40 CFR 60.14(h); 40 CFR 60.14(i); 40 CFR 60.14(j); 40 CFR 60.14(k); 40 CFR 60.14(l); 40 CFR 60.15(a); 40 CFR 60.15(b); 40 CFR 60.15(c); 40 CFR 60.15(d); 40 CFR 60.15(e); 40 CFR 60.15(f); 40 CFR 60.15(g); 40 CFR 60.17; 40 CFR 60.18(b)-(f); 40 CFR 60.18(g)-(i); 40 CFR 60.19(a); 40 CFR 60.19(b); 40 CFR 60.19(c); 40 CFR 60.19(d); 40 CFR 60.19(e); 40 CFR 60.19(f)(1); 40 CFR 60.19(f)(2); 40 CFR 60.19(f)(3); and 40 CFR 60.19(f)(4). A copy of 40 CFR pt. 60, subp. A is included in Appendix K. If the standard changes or upon adoption of a new or amended federal applicable requirement, and if there are more than 3 years remaining in the permit term, the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3. [40 CFR pt. 60, subp. A, Minn. R. 7007.0400, subp. 3, Minn. R. 7007.1150-7007.1500, Minn. R. 7011.0050, Minn. R. 7017.1010 & 7017.2025, Minn. R. 7019.0100]
5.40.19	EQUI 120 is a new affected source as defined under 40 CFR pt. 63, subp. ZZZZ, and the facility is an area source as defined at 40 CFR Section 63.2. The Permittee shall meet the applicable requirements of 40 CFR

Requirement number	Requirement and citation
	pt. 63, subp. ZZZZ by meeting the requirements of 40 CFR pt. 60, subp. IIII. No further requirements of 40 CFR pt. 63, subp. ZZZZ apply to EQUI 120. [40 CFR 63.6590(c), Minn. R. 7011.8150]
EQUI 121	**Die Cast (DC09)**
5.41.1	The Permittee must limit Process Throughput <= 290.53 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.41.2	Process Throughput: Daily Recordkeeping. By 4:30 pm on each day of operation, the Permittee shall measure or calculate, record, and maintain a record of the following for the previous operating day: 1) the total weight of each lead-containing material processed by EQUI 121, this shall be based on written usage logs; and 2) daily average of the hourly process throughput for EQUI 121 for the previous operating day. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.41.3	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 121 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.41.4	Lead: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 121 in the previous operating day using the daily usage records; and 2) The total lead emissions for the previous operating day using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.41.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equations: EQUI121PM10 = [A x B x 0.95 x (1 - CE1)] / 24 EQUI121FPM10 = (A x B x 0.05) / 24 Where: EQUI121PM10 = daily average PM10 stack emissions from EQUI 121, in pounds/hour; EQUI121FPM10 = daily average uncaptured PM10 emissions from EQUI 121, in pounds/hour; A = total weight of lead-containing material processed by EQUI 121 for the previous operating day, in pounds/day; B = uncontrolled PM10 emission factor for EQUI 121 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.41.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equations: EQUI121PM2.5 = [A x C x 0.95 x (1 - CE2)] / 24 EQUI121FPM2.5 = (A x C x 0.05) / 24 Where: EQUI121PM2.5 = daily average PM2.5 stack emissions from EQUI 121, in pounds/hour; EQUI121FPM2.5 = daily average uncaptured PM2.5 emissions from EQUI 121, in pounds/hour;

Commented [A120]: Strike these sections. The throughput limit and recordkeeping data are sufficient to show compliance with the relevant PM and lead standards and the compliant modeling scenario. Daily emissions calculations are unnecessary and redundant. This comment applies to all die casting units.

Requirement number	Requirement and citation
	A = total weight of lead-containing material processed by EQUI 121 for the previous operating day, in pounds/day; C = uncontrolled PM2.5 emission factor for EQUI 121 listed in Appendix D, as a fraction; and CE2 = minimum overall PM2.5 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.41.7	Lead: Daily Calculation. The Permittee shall calculate lead emissions using the following equations: EQUI121L = D x E EQUI121FL = D x H x 0.05 Where: EQUI121L = total lead stack emissions from EQUI 121, in pounds/day; EQUI121FL = total uncaptured lead emissions from EQUI 121, in pounds/day; D = total weight of lead-containing material processed by EQUI 121 for the previous operating day, in pounds/day; E = controlled lead emission factor for EQUI 121 listed in Appendix D, as a fraction; and H = uncontrolled lead emission factor for EQUI 121 listed in Appendix D, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.41.8	The Permittee shall vent captured emissions from EQUI 121 to control equipment meeting the requirements of TREA 25 and TREA 61 operated in-series, and COMG 12 whenever EQUI 121 operates. The emissions from EQUI 121 shall be captured with a closed connection to control equipment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.41.9	The Permittee shall vent captured emissions from EQUI 121 to a stack/vent meeting the requirements of STRU 15 whenever EQUI 121 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.41.10	Within 6 months of permit issuance, ~~T~~the Permittee shall vent uncaptured emissions from EQUI 121 to a stack/vent meeting the requirements of STRU 48 whenever EQUI 121 operates. The uncaptured emissions shall be limited to emissions escaping the die cast casing. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.41.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.41.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.41.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the

Commented [A121]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A122]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A123]: Permittee needs an approvable test plan, not to submit a major permit application.

Requirement number	Requirement and citation
	new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.41.14	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM2.5 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM2.5 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.42.15	~~PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.42.16	PM < 2.5 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.42.17	Lead: Protocol for Re-Setting the Emission Factor Used For Calculating Lead Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 12 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used The Permittee shall report the test result in pound lead per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound lead per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.42.18	~~Lead: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating Lead Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.42.19	Lead: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
EQUI 123	**Die Cast (DC33)**

Commented [A130]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A131]: Permittee needs an approvable test plan, not to submit a major amendment application.

Commented [A132]: Permittee needs an approvable test plan, not to submit a major permit application.

Requirement number	Requirement and citation
5.43.1	The Permittee must limit Process Throughput <= 401.24 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.43.2	Process Throughput: Daily Recordkeeping. By 4:30 pm on each day of operation, the Permittee shall measure or calculate, record, and maintain a record of the following for the previous operating day: 1) the total weight of each lead-containing material processed by EQUI 123, this shall be based on written usage logs; and 2) daily average of the hourly process throughput for EQUI 123 for the previous operating day. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.43.3	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 123 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.43.4	Lead: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 123 in the previous operating day using the daily usage records; and 2) The total lead emissions for the previous operating day using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.43.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equations: EQUI123PM10 = [A x B x 0.95 x (1 - CE1)] / 24 EQUI123FPM10 = (A x B x 0.05) / 24 Where: EQUI123PM10 = daily average PM10 stack emissions from EQUI 123, in pounds/hour; EQUI123FPM10 = daily average uncaptured PM10 emissions from EQUI 123, in pounds/hour; A = total weight of lead-containing material processed by EQUI 123 for the previous operating day, in pounds/day; B = uncontrolled PM10 emission factor for EQUI 123 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.43.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equations: EQUI123PM2.5 = [A x C x 0.95 x (1 - CE2)] / 24 EQUI123FPM2.5 = (A x C x 0.05) / 24 Where: EQUI123PM2.5 = daily average PM2.5 stack emissions from EQUI 123, in pounds/hour; EQUI123FPM2.5 = daily average uncaptured PM2.5 emissions from EQUI 123, in pounds/hour; A = total weight of lead-containing material processed by EQUI 123 for the previous operating day, in pounds/day; C = uncontrolled PM2.5 emission factor for EQUI 123 listed in Appendix D, as a fraction; and

If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
EQUI 125	**Die Cast (DC15)**

Commented [A142]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A143]: Permittee needs an approvable test plan, not to submit a major permit application.

Commented [A144]: Permittee needs an approvable test plan, not to submit a major permit application.

Requirement number	Requirement and citation
5.45.1	The Permittee must limit Process Throughput <= 233.75 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.45.2	Process Throughput: Daily Recordkeeping. By 4:30 pm on each day of operation, the Permittee shall measure or calculate, record, and maintain a record of the following for the previous operating day: 1) the total weight of each lead-containing material processed by EQUI 125, this shall be based on written usage logs; and 2) daily average of the hourly process throughput for EQUI 125 for the previous operating day. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.45.3	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 125 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.45.4	Lead: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 125 in the previous operating day using the daily usage records; and 2) The total lead emissions for the previous operating day using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.45.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equations: EQUI125PM10 = [A x B x 0.95 x (1 - CE1)] / 24 EQUI125FPM10 = (A x B x 0.05) / 24 Where: EQUI125PM10 = daily average PM10 stack emissions from EQUI 125, in pounds/hour; EQUI125FPM10 = daily average uncaptured PM10 emissions from EQUI 125, in pounds/hour; A = total weight of lead-containing material processed by EQUI 125 for the previous operating day, in pounds/day; B = uncontrolled PM10 emission factor for EQUI 125 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.45.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equations: EQUI125PM2.5 = [A x C x 0.95 x (1 - CE2)] / 24 EQUI125FPM2.5 = (A x C x 0.05) / 24 Where: EQUI125PM2.5 = daily average PM2.5 stack emissions from EQUI 125, in pounds/hour; EQUI125FPM2.5 = daily average uncaptured PM2.5 emissions from EQUI 125, in pounds/hour; A = total weight of lead-containing material processed by EQUI 125 for the previous operating day, in pounds/day; C = uncontrolled PM2.5 emission factor for EQUI 125 listed in Appendix D, as a fraction; and

Requirement number	Requirement and citation
	CE2 = minimum overall PM2.5 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.45.7	Lead: Daily Calculation. The Permittee shall calculate lead emissions using the following equations: EQUI125L = D x E EQUI125FL = D x H x 0.05 Where: EQUI125L = total lead stack emissions from EQUI 125, in pounds/day; EQUI125FL = total uncaptured lead emissions from EQUI 125, in pounds/day; D = total weight of lead-containing material processed by EQUI 125 for the previous operating day, in pounds/day; E = controlled lead emission factor for EQUI 125 listed in Appendix D, as a fraction; and H = uncontrolled lead emission factor for EQUI 125 listed in Appendix D, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.45.8	The Permittee shall vent captured emissions from EQUI 125 to control equipment meeting the requirements of TREA 26 and TREA 63 operated in-series, and COMG 12 whenever EQUI 125 operates. The emissions from EQUI 125 shall be captured with a closed connection to control equipment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.45.9	The Permittee shall vent captured emissions from EQUI 125 to a stack/vent meeting the requirements of STRU 16 whenever EQUI 125 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.45.10	Within 6 months of permit issuance, ~~T~~the Permittee shall vent uncaptured emissions from EQUI 125 to a stack/vent meeting the requirements of STRU 50 whenever EQUI 125 operates. The uncaptured emissions shall be limited to emissions escaping the die cast casing. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020- 7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.45.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.45.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.45.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A145]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A146]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A147]: Permittee needs to submit an approvable test plan, not a major permit amendment application.

Requirement number	Requirement and citation
5.45.14	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM2.5 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 4-5]
5.47.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equations: EQUI127PM10 = [A x B x 0.95 x (1 - CE1)] / 24 EQUI127FPM10 = (A x B x 0.05) / 24 Where: EQUI127PM10 = daily average PM10 stack emissions from EQUI 127, in pounds/hour; EQUI127FPM10 = daily average uncaptured PM10 emissions from EQUI 127, in pounds/hour; A = total weight of lead-containing material processed by EQUI 127 for the previous operating day, in pounds/day; B = uncontrolled PM10 emission factor for EQUI 127 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.47.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equations: EQUI127PM2.5 = [A x C x 0.95 x (1 - CE2)] / 24 EQUI127FPM2.5 = (A x C x 0.05) / 24 Where: EQUI127PM2.5 = daily average PM2.5 stack emissions from EQUI 127, in pounds/hour; EQUI127FPM2.5 = daily average uncaptured PM2.5 emissions from EQUI 127, in pounds/hour; A = total weight of lead-containing material processed by EQUI 127 for the previous operating day, in pounds/day; C = uncontrolled PM2.5 emission factor for EQUI 127 listed in Appendix D, as a fraction; and

Requirement number	Requirement and citation
	CE2 = minimum overall PM2.5 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.47.7	Lead: Daily Calculation. The Permittee shall calculate lead emissions using the following equations: EQUI127L = D x E EQUI127FL = D x H x 0.05 Where: EQUI127L = total lead stack emissions from EQUI 127, in pounds/day; EQUI127FL = total uncaptured lead emissions from EQUI 127, in pounds/day; D = total weight of lead-containing material processed by EQUI 127 for the previous operating day, in pounds/day; E = controlled lead emission factor for EQUI 127 listed in Appendix D, as a fraction; and H = uncontrolled lead emission factor for EQUI 127 listed in Appendix D, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.47.8	The Permittee shall vent captured emissions from EQUI 127 to control equipment meeting the requirements of TREA 27 and TREA 64 operated in-series, and COMG 12 whenever EQUI 127 operates. The emissions from EQUI 127 shall be captured with a closed connection to control equipment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.47.9	The Permittee shall vent captured emissions from EQUI 127 to a stack/vent meeting the requirements of STRU 17 whenever EQUI 127 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.47.10	Within 6 months of permit issuance, ~~T~~the Permittee shall vent uncaptured emissions from EQUI 127 to a stack/vent meeting the requirements of STRU 47 whenever EQUI 127 operates. The uncaptured emissions shall be limited to emissions escaping the die cast casing. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020- 7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.47.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.47.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.47.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A157]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A158]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A159]: Permittee must submit an approvable test plan, not a major permit amendment application.

The emissions from EQUI 129 shall be captured with a closed connection to control equipment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.49.9	The Permittee shall vent captured emissions from EQUI 129 to a stack/vent meeting the requirements of STRU 17 whenever EQUI 129 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.49.10	Within 6 months of permit issuance, ~~T~~the Permittee shall vent uncaptured emissions from EQUI 129 to a stack/vent meeting the requirements of STRU 47 whenever EQUI 129 operates. The uncaptured emissions shall be limited to emissions escaping the die cast casing. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020- 7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.49.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.49.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.49.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A169]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A170]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A171]: Permittee must submit an approvable test plan, not a major permit amendment application.

5.51.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A181]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A182]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A183]: Permittee must submit an approvable test plan, not a major permit amendment application.

Requirement number	Requirement and citation
5.51.14	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM2.5 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.51.15	~~PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.51.16	PM < 2.5 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.51.17	Lead: Protocol for Re-Setting the Emission Factor Used For Calculating Lead Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 12 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound lead per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound lead per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.51.18	~~Lead: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating Lead Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.51.19	Lead: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
EQUI 132	**Die Cast (DC37)**

Commented [A184]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A185]: Permittee must submit an approvable test plan, not a major permit amendment application.

Requirement number	Requirement and citation
5.52.1	The Permittee must limit Process Throughput <= 552.50 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.52.2	Process Throughput: Daily Recordkeeping. By 4:30 pm on each day of operation, the Permittee shall measure or calculate, record, and maintain a record of the following for the previous operating day: 1) the total weight of each lead-containing material processed by EQUI 132, this shall be based on written usage logs; and 2) daily average of the hourly process throughput for EQUI 132 for the previous operating day. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.52.3	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 132 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.52.4	Lead: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 132 in the previous operating day using the daily usage records; and 2) The total lead emissions for the previous operating day using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.52.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equations: EQUI132PM10 = [A x B x 0.95 x (1 - CE1)] / 24 EQUI132FPM10 = (A x B x 0.05) / 24 Where: EQUI132PM10 = daily average PM10 stack emissions from EQUI 132, in pounds/hour; EQUI132FPM10 = daily average uncaptured PM10 emissions from EQUI 132, in pounds/hour; A = total weight of lead-containing material processed by EQUI 132 for the previous operating day, in pounds/day; B = uncontrolled PM10 emission factor for EQUI 132 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.52.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equations: EQUI132PM2.5 = [A x C x 0.95 x (1 - CE2)] / 24 EQUI132FPM2.5 = (A x C x 0.05) / 24 Where: EQUI132PM2.5 = daily average PM2.5 stack emissions from EQUI 132, in pounds/hour; EQUI132FPM2.5 = daily average uncaptured PM2.5 emissions from EQUI 132, in pounds/hour; A = total weight of lead-containing material processed by EQUI 132 for the previous operating day, in pounds/day; C = uncontrolled PM2.5 emission factor for EQUI 132 listed in Appendix D, as a fraction; and

The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.53.18	~~Lead: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating Lead Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.53.19	Lead: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
EQUI 134	**Die Cast (DC22)**

Commented [A195]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A196]: Permittee must submit an approvable test plan, not a major permit amendment application.

Commented [A197]: Permittee must submit an approvable test plan, not a major permit amendment application.

Requirement number	Requirement and citation
5.54.1	The Permittee must limit Process Throughput <= 452.85 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.54.2	Process Throughput: Daily Recordkeeping. By 4:30 pm on each day of operation, the Permittee shall measure or calculate, record, and maintain a record of the following for the previous operating day: 1) the total weight of each lead-containing material processed by EQUI 134, this shall be based on written usage logs; and 2) daily average of the hourly process throughput for EQUI 134 for the previous operating day. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.54.3	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 134 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.54.4	Lead: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 134 in the previous operating day using the daily usage records; and 2) The total lead emissions for the previous operating day using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.54.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equations: EQUI134PM10 = [A x B x 0.95 x (1 - CE1)] / 24 EQUI134FPM10 = (A x B x 0.05) / 24 Where: EQUI134PM10 = daily average PM10 stack emissions from EQUI 134, in pounds/hour; EQUI134FPM10 = daily average uncaptured PM10 emissions from EQUI 134, in pounds/hour; A = total weight of lead-containing material processed by EQUI 134 for the previous operating day, in pounds/day; B = uncontrolled PM10 emission factor for EQUI 134 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.54.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equations: EQUI134PM2.5 = [A x C x 0.95 x (1 - CE2)] / 24 EQUI134FPM2.5 = (A x C x 0.05) / 24 Where: EQUI134PM2.5 = daily average PM2.5 stack emissions from EQUI 134, in pounds/hour; EQUI134FPM2.5 = daily average uncaptured PM2.5 emissions from EQUI 134, in pounds/hour; A = total weight of lead-containing material processed by EQUI 134 for the previous operating day, in pounds/day; C = uncontrolled PM2.5 emission factor for EQUI 134 listed in Appendix D, as a fraction; and

Requirement number	Requirement and citation
	CE2 = minimum overall PM10 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.54.7	Lead: Daily Calculation. The Permittee shall calculate lead emissions using the following equations: EQUI134L = D x E EQUI134FL = D x H x 0.05 Where: EQUI134L = total lead stack emissions from EQUI 134, in pounds/day; EQUI134FL = total uncaptured lead emissions from EQUI 134, in pounds/day; D = total weight of lead-containing material processed by EQUI 134 for the previous operating day, in pounds/day; E = controlled lead emission factor for EQUI 134 listed in Appendix D, as a fraction; and H = uncontrolled lead emission factor for EQUI 134 listed in Appendix D, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.54.8	The Permittee shall vent captured emissions from EQUI 134 to control equipment meeting the requirements of TREA 79 and TREA 67 operated in-series, and COMG 12 whenever EQUI 134 operates. The emissions from EQUI 134 shall be captured with a closed connection to control equipment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.54.9	The Permittee shall vent captured emissions from EQUI 134 to a stack/vent meeting the requirements of STRU 75 whenever EQUI 134 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.54.10	Within 6 months of permit issuance, ~~t~~The Permittee shall vent uncaptured emissions from EQUI 134 to a stack/vent meeting the requirements of STRU 44 whenever EQUI 134 operates. The uncaptured emissions shall be limited to emissions escaping the die cast casing. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020- 7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.54.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.54.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.54.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A198]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A199]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A200]: Permittee must submit an approvable test plan, not a major permit amendment application.

Requirement number	Requirement and citation
5.54.14	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM2.5 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 4-5]
5.56.4	Lead: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 136 in the previous operating day using the daily usage records; and 2) The total lead emissions for the previous operating day using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.56.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equations: EQUI136PM10 = [A x B x 0.95 x (1 - CE1)] / 24 EQUI136FPM10 = (A x B x 0.05) / 24 Where: EQUI136PM10 = daily average PM10 stack emissions from EQUI 136, in pounds/hour; EQUI136FPM10 = daily average uncaptured PM10 emissions from EQUI 136, in pounds/hour; A = total weight of lead-containing material processed by EQUI 136 for the previous operating day, in pounds/day; B = uncontrolled PM10 emission factor for EQUI 136 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.56.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equations: EQUI136PM2.5 = [A x C x 0.95 x (1 - CE2)] / 24 EQUI136FPM2.5 = (A x C x 0.05) / 24 Where: EQUI136PM2.5 = daily average PM2.5 stack emissions from EQUI 136, in pounds/hour; EQUI136FPM2.5 = daily average uncaptured PM2.5 emissions from EQUI 136, in pounds/hour; A = total weight of lead-containing material processed by EQUI 136 for the previous operating day, in pounds/day; C = uncontrolled PM2.5 emission factor for EQUI 136 listed in Appendix D, as a fraction; and

Requirement number	Requirement and citation
	CE2 = minimum overall PM2.5 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.56.7	Lead: Daily Calculation. The Permittee shall calculate lead emissions using the following equations: EQUI136L = D x E EQUI136FL = D x H x 0.05 Where: EQUI136L = total lead stack emissions from EQUI 136, in pounds/day; EQUI136FL = total uncaptured lead emissions from EQUI 136, in pounds/day; D = total weight of lead-containing material processed by EQUI 136 for the previous operating day, in pounds/day; E = controlled lead emission factor for EQUI 136 listed in Appendix D, as a fraction; and H = uncontrolled lead emission factor for EQUI 136 listed in Appendix D, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.56.8	The Permittee shall vent captured emissions from EQUI 136 to control equipment meeting the requirements of TREA 33 and TREA 68 operated in-series, and COMG 12 whenever EQUI 136 operates. The emissions from EQUI 136 shall be captured with a closed connection to control equipment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.56.9	The Permittee shall vent captured emissions from EQUI 136 to a stack/vent meeting the requirements of STRU 23 whenever EQUI 136 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.56.10	Within 6 months of permit issuance, ~~t~~The Permittee shall vent uncaptured emissions from EQUI 136 to a stack/vent meeting the requirements of STRU 44 whenever EQUI 136 operates. The uncaptured emissions shall be limited to emissions escaping the die cast casing. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020- 7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.56.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.56.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.56.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A210]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A211]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A212]: Permittee must submit an approvable test plan, not a major permit amendment application.

[Minn. R. 7007.0800, subps. 4-5]
5.58.8	The Permittee shall vent captured emissions from EQUI 138 to control equipment meeting the requirements of TREA 34 and TREA 69 operated in-series, and COMG 12 whenever EQUI 138 operates. The emissions from EQUI 138 shall be captured with a closed connection to control equipment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.58.9	The Permittee shall vent captured emissions from EQUI 138 to a stack/vent meeting the requirements of STRU 24 whenever EQUI 138 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.58.10	Within 6 months of permit issuance, ~~t~~The Permittee shall vent uncaptured emissions from EQUI 138 to a stack/vent meeting the requirements of STRU 45 whenever EQUI 138 operates. The uncaptured emissions shall be limited to emissions escaping the die cast casing. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020- 7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.58.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.58.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.58.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A222]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A223]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A224]: Permittee must submit an approvable test plan, not a major permit amendment application.

5.60.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A234]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A235]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A236]: Permittee needs an approvable test plan, not to submit a major permit application.

The Permittee shall report the test result in pound lead per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound lead per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.62.18	~~Lead: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating Lead Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.62.19	Lead: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
EQUI 143	**Die Cast (DC34)**

Commented [A249]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A250]: Permittee needs an approvable test plan, not to submit a major permit application.

Commented [A251]: Permittee needs an approvable test plan, not to submit a major permit application.

Requirement number	Requirement and citation
5.63.1	The Permittee must limit Process Throughput <= 462.53 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.63.2	Process Throughput: Daily Recordkeeping. By 4:30 pm on each day of operation, the Permittee shall measure or calculate, record, and maintain a record of the following for the previous operating day: 1) the total weight of each lead-containing material processed by EQUI 143, this shall be based on written usage logs; and 2) daily average of the hourly process throughput for EQUI 143 for the previous operating day. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.63.3	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 143 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.63.4	Lead: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 143 in the previous operating day using the daily usage records; and 2) The total lead emissions for the previous operating day using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.63.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equations: EQUI143PM10 = [A x B x 0.95 x (1 - CE1)] / 24 EQUI143FPM10 = (A x B x 0.05) / 24 Where: EQUI143PM10 = daily average PM10 stack emissions from EQUI 143, in pounds/hour; EQUI143FPM10 = daily average uncaptured PM10 emissions from EQUI 143, in pounds/hour; A = total weight of lead-containing material processed by EQUI 143 for the previous operating day, in pounds/day; B = uncontrolled PM10 emission factor for EQUI 143 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.63.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equations: EQUI143PM2.5 = [A x C x 0.95 x (1 - CE2)] / 24 EQUI143FPM2.5 = (A x C x 0.05) / 24 Where: EQUI143PM2.5 = daily average PM2.5 stack emissions from EQUI 143, in pounds/hour; EQUI143FPM2.5 = daily average uncaptured PM2.5 emissions from EQUI 143, in pounds/hour; A = total weight of lead-containing material processed by EQUI 143 for the previous operating day, in pounds/day; C = uncontrolled PM2.5 emission factor for EQUI 143 listed in Appendix D, as a fraction; and

Requirement number	Requirement and citation
	CE2 = minimum overall PM2.5 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.63.7	Lead: Daily Calculation. The Permittee shall calculate lead emissions using the following equations: EQUI143L = D x E EQUI143FL = D x H x 0.05 Where: EQUI143L = total lead stack emissions from EQUI 143, in pounds/day; EQUI143FL = total uncaptured lead emissions from EQUI 143, in pounds/day; D = total weight of lead-containing material processed by EQUI 143 for the previous operating day, in pounds/day; E = controlled lead emission factor for EQUI 143 listed in Appendix D, as a fraction; and H = uncontrolled lead emission factor for EQUI 143 listed in Appendix D, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.63.8	The Permittee shall vent captured emissions from EQUI 143 to control equipment meeting the requirements of TREA 36 and TREA 71 operated in-series, and COMG 12 whenever EQUI 143 operates. The emissions from EQUI 143 shall be captured with a closed connection to control equipment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.63.9	The Permittee shall vent captured emissions from EQUI 143 to a stack/vent meeting the requirements of STRU 26 whenever EQUI 143 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.63.10	Within 6 months of permit issuance, ~~t~~The Permittee shall vent uncaptured emissions from EQUI 143 to a stack/vent meeting the requirements of STRU 46 whenever EQUI 143 operates. The uncaptured emissions shall be limited to emissions escaping the die cast casing. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020- 7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.63.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.63.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.63.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A252]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A253]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A254]: Permittee needs an approvable test plan, not to submit a major permit application.

Requirement number	Requirement and citation

[Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.65.3	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 147 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.65.4	Lead: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 147 in the previous operating day using the daily usage records; and 2) The total lead emissions for the previous operating day using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.65.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equations: EQUI147PM10 = [A x B x 0.95 x (1 - CE1)] / 24 EQUI147FPM10 = (A x B x 0.05) / 24 Where: EQUI147PM10 = daily average PM10 stack emissions from EQUI 147, in pounds/hour; EQUI147FPM10 = daily average uncaptured PM10 emissions from EQUI 147, in pounds/hour; A = total weight of lead-containing material processed by EQUI 147 for the previous operating day, in pounds/day; B = uncontrolled PM10 emission factor for EQUI 147 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.65.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equations: EQUI147PM2.5 = [A x C x 0.95 x (1 - CE2)] / 24 EQUI147FPM2.5 = (A x C x 0.05) / 24 Where: EQUI147PM2.5 = daily average PM2.5 stack emissions from EQUI 147, in pounds/hour; EQUI147FPM2.5 = daily average uncaptured PM2.5 emissions from EQUI 147, in pounds/hour; A = total weight of lead-containing material processed by EQUI 147 for the previous operating day, in pounds/day; C = uncontrolled PM2.5 emission factor for EQUI 147 listed in Appendix D, as a fraction; and

Requirement number	Requirement and citation
	CE2 = minimum overall PM2.5 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.65.7	Lead: Daily Calculation. The Permittee shall calculate lead emissions using the following equations: EQUI147L = D x E EQUI147FL = D x H x 0.05 Where: EQUI147L = total lead stack emissions from EQUI 147, in pounds/day; EQUI147FL = total uncaptured lead emissions from EQUI 147, in pounds/day; D = total weight of lead-containing material processed by EQUI 147 for the previous operating day, in pounds/day; E = controlled lead emission factor for EQUI 147 listed in Appendix D, as a fraction; and H = uncontrolled lead emission factor for EQUI 147 listed in Appendix D, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.65.8	The Permittee shall vent captured emissions from EQUI 147 to control equipment meeting the requirements of TREA 40 and TREA 74 operated in-series, and COMG 12 whenever EQUI 147 operates. The emissions from EQUI 147 shall be captured with a closed connection to control equipment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.65.9	The Permittee shall vent captured emissions from EQUI 147 to a stack/vent meeting the requirements of STRU 31 whenever EQUI 147 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.65.10	Within 6 months of permit issuance, ~~t~~The Permittee shall vent uncaptured emissions from EQUI 147 to a stack/vent meeting the requirements of STRU 52 whenever EQUI 147 operates. The uncaptured emissions shall be limited to emissions escaping the die cast casing. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020- 7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.65.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.65.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.65.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A264]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A265]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A266]: Permittee needs an approvable test plan, not to submit a major permit application.

	CE2 = minimum overall PM2.5 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.67.7	Lead: Daily Calculation. The Permittee shall calculate lead emissions using the following equations: EQUI150L = D x E EQUI150FL = D x H x 0.05 Where: EQUI150L = total lead stack emissions from EQUI 150, in pounds/day; EQUI150FL = total uncaptured lead emissions from EQUI 150, in pounds/day; D = total weight of lead-containing material processed by EQUI 150 for the previous operating day, in pounds/day; E = controlled lead emission factor for EQUI 150 listed in Appendix D, as a fraction; and H = uncontrolled lead emission factor for EQUI 150 listed in Appendix D, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.67.8	The Permittee shall vent captured emissions from EQUI 150 to control equipment meeting the requirements of TREA 41 and TREA 75 operated in-series, and COMG 12 whenever EQUI 150 operates. The emissions from EQUI 150 shall be captured with a closed connection to control equipment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.67.9	The Permittee shall vent captured emissions from EQUI 150 to a stack/vent meeting the requirements of STRU 32 whenever EQUI 150 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.67.10	Within 6 months of permit issuance, ~~t~~The Permittee shall vent uncaptured emissions from EQUI 150 to a stack/vent meeting the requirements of STRU 53 whenever EQUI 150 operates. The uncaptured emissions shall be limited to emissions escaping the die cast casing. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020- 7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.67.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.67.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.67.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A276]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A277]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A278]: Permittee needs an approvable test plan, not to submit a major permit application.

5.69.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.69.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.69.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A288]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A289]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A290]: Permittee needs an approvable test plan, not to submit a major permit application.

Requirement number	Requirement and citation
5.69.14	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM2.5 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. 5.71.15	~~PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.71.16	PM < 2.5 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.71.17	Lead: Protocol for Re-Setting the Emission Factor Used For Calculating Lead Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 12 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound lead per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound lead per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.71.18	~~Lead: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating Lead Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.71.19	Lead: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
EQUI 156	**Die Cast (DC50)**

Commented [A303]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A304]: Permittee needs an approvable test plan, not to submit a major permit application.

Commented [A305]: Permittee needs an approvable test plan, not to submit a major permit application.

Requirement number	Requirement and citation
5.72.1	The Permittee must limit Process Throughput <= 855.22 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.72.2	Process Throughput: Daily Recordkeeping. By 4:30 pm on each day of operation, the Permittee shall measure or calculate, record, and maintain a record of the following for the previous operating day: 1) the total weight of each lead-containing material processed by EQUI 156, this shall be based on written usage logs; and 2) daily average of the hourly process throughput for EQUI 156 for the previous operating day. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.72.3	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 156 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.72.4	Lead: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 156 in the previous operating day using the daily usage records; and 2) The total lead emissions for the previous operating day using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.72.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equations: EQUI156PM10 = [A x B x 0.95 x (1 - CE1)] / 24 EQUI156FPM10 = (A x B x 0.05) / 24 Where: EQUI156PM10 = daily average PM10 stack emissions from EQUI 156, in pounds/hour; EQUI156FPM10 = daily average uncaptured PM10 emissions from EQUI 156, in pounds/hour; A = total weight of lead-containing material processed by EQUI 156 for the previous operating day, in pounds/day; B = uncontrolled PM10 emission factor for EQUI 156 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.72.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equations: EQUI156PM2.5 = [A x C x 0.95 x (1 - CE1)] / 24 EQUI156FPM2.5 = (A x C x 0.05) / 24 Where: EQUI156PM2.5 = daily average PM2.5 stack emissions from EQUI 156, in pounds/hour; EQUI156FPM2.5 = daily average uncaptured PM2.5 emissions from EQUI 156, in pounds/hour; A = total weight of lead-containing material processed by EQUI 156 for the previous operating day, in pounds/day; C = uncontrolled PM2.5 emission factor for EQUI 156 listed in Appendix D, as a fraction; and

5.74.1	The Permittee must limit Process Throughput <= 1233.40 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.74.2	Process Throughput: Daily Recordkeeping. By 4:30 pm on each day of operation, the Permittee shall measure or calculate, record, and maintain a record of the following for the previous operating day: 1) the total weight of each lead-containing material processed by EQUI 158, this shall be based on written usage logs; and 2) daily average of the hourly process throughput for EQUI 158 for the previous operating day. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.74.3	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 158 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.74.4	Lead: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 158 in the previous operating day using the daily usage records; and 2) The total lead emissions for the previous operating day using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.74.5	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equations: EQUI158PM10 = [A x B x 0.95 x (1 - CE1)] / 24 EQUI158FPM10 = (A x B x 0.05) / 24 Where: EQUI158PM10 = daily average PM10 stack emissions from EQUI 158, in pounds/hour; EQUI158FPM10 = daily average uncaptured PM10 emissions from EQUI 158, in pounds/hour; A = total weight of lead-containing material processed by EQUI 158 for the previous operating day, in pounds/day; B = uncontrolled PM10 emission factor for EQUI 158 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.74.6	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equations: EQUI158PM2.5 = [A x C x 0.95 x (1 - CE2)] / 24 EQUI158FPM2.5 = (A x C x 0.05) / 24 Where: EQUI158PM2.5 = daily average PM2.5 stack emissions from EQUI 158, in pounds/hour; EQUI158FPM2.5 = daily average uncaptured PM2.5 emissions from EQUI 158, in pounds/hour; A = total weight of lead-containing material processed by EQUI 158 for the previous operating day, in pounds/day; C = uncontrolled PM2.5 emission factor for EQUI 158 listed in Appendix D, as a fraction; and

Requirement number	Requirement and citation
	CE2 = minimum overall PM2.5 control efficiency required by COMG 12, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.74.7	Lead: Daily Calculation. The Permittee shall calculate lead emissions using the following equations: EQUI158L = D x E EQUI158FL = D x H x 0.05 Where: EQUI158L = total lead stack emissions from EQUI 158, in pounds/day; EQUI158FL = total uncaptured lead emissions from EQUI 158, in pounds/day; D = total weight of lead-containing material processed by EQUI 158 for the previous operating day, in pounds/day; E = controlled lead emission factor for EQUI 158 listed in Appendix D, as a fraction; and H = uncontrolled lead emission factor for EQUI 158 listed in Appendix D, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.74.8	The Permittee shall vent captured emissions from EQUI 158 to control equipment meeting the requirements of TREA 39 and TREA 73 operated in-series, and COMG 12 whenever EQUI 158 operates. The emissions from EQUI 158 shall be captured with a closed connection to control equipment. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.74.9	The Permittee shall vent captured emissions from EQUI 158 to a stack/vent meeting the requirements of STRU 30 whenever EQUI 158 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.74.10	Within 6 months of permit issuance, ~~t~~The Permittee shall vent uncaptured emissions from EQUI 158 to a stack/vent meeting the requirements of STRU 52 whenever EQUI 158 operates. The uncaptured emissions shall be limited to emissions escaping the die cast casing. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020- 7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.74.11	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.74.12	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.74.13	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]

Commented [A318]: The potential for supply chain issues and the magnitude of change may require a compliance schedule for vent reconstruction due to conditions outside of Water Gremlin's control.

Commented [A319]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A320]: Permittee needs an approvable test plan, not to submit a major permit application.

Requirement number	Requirement and citation
5.74.14	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM2.5 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.74.15	~~PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.74.16	PM < 2.5 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.74.17	Lead: Protocol for Re-Setting the Emission Factor Used For Calculating Lead Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 12 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound lead per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound lead per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.74.18	~~Lead: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating Lead Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.74.19	Lead: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
EQUI 160	**Billet Saw**

Commented [A321]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A322]: Permittee needs an approvable test plan, not to submit a major permit application.

Commented [A323]: Permittee needs an approvable test plan, not to submit a major permit application.

Requirement number	Requirement and citation
5.75.1	The Permittee must limit Process Throughput <= 1000.0 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.75.2	The Permittee shall limit Process Throughput <= 24.0 pounds per hour 365-day rolling sum. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.75.3	Process Throughput and Hours of Operation: Daily Recordkeeping. By 4:30 pm on each day of operation, the Permittee shall measure or calculate, record, and maintain a record of the following for the previous operating day: 1) the total weight of each lead-containing material processed by EQUI 160, this shall be based on written usage logs; 2) daily average of the hourly process throughput for EQUI 160 for the previous operating day; 3) average of the hourly process throughput for EQUI 160 for the previous 365-day period by calculating the average of the daily hourly process throughput for the previous 365 days; and 4) the time of the day when the EQUI 160 was operating. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.75.4	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of each lead-containing material processed by EQUI 160 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. EQUI 174	**Solvent Distillation Unit**
5.79.1	The Permittee shall vent emissions from EQUI 174 to a stack/vent meeting the requirements of STRU 59 whenever EQUI 174 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.79.2	The Permittee shall operate EQUI 174 meeting the requirements of COMG 1. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.79.3	VOC Solvent Distiller Operation: The Permittee shall minimize fugitive VOC emissions and spills during filling, operation, emptying, and clean out of the VOC solvent distiller according to standard operating procedures, including the following: 1) Install a fill sensor or other fail-safe to prevent spilling of recycled VOC solvent during distillation; 2) Ensure that the operator of the distillation equipment remains in close proximity to the equipment while distillation is taking place; 3) Transfer recycled VOC solvent from distiller into containers that include secondary containment; and 4) Empty all distiller bottoms and other residue into a closed container and dispose as hazardous waste. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. ch. 7045, Minn. Stat. 116.385, subd. 3]
5.79.4	The Permittee may only distill dirty solvent that contains 1,2-(trans-) Dichloroethylene from the parts soaker tank (EQUI 173). [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.79.5	1,2-(trans-) Dichloroethylene Content of Distilled Material: The Permittee shall determine the specific content of 1,2-(trans-) Dichloroethylene in distilled material, in weight percent, following the analysis procedure and frequency requirements in Appendix B. Alternatively, the Permittee may analyze the distilled material for VOC and assume all of the VOC in distilled material is 1,2-(trans-) Dichloroethylene. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]

Requirement number	Requirement and citation
EQUI 176	**VOC CEMS (STRU 73)**
5.80.1	~~1,2 (trans-) Dichloroethylene: Emissions Monitoring: The Permittee shall install, operate, and maintain a CEMS to measure 1,2 (trans-) Dichloroethylene emissions discharged to the atmosphere from STRU 73, and shall record the output of the system. [Minn. R. 7017.1006, Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]~~
5.80.2	~~Certification Test Plan due 30 days before Certification Test.~~ ~~Certification Test Pretest Meeting due seven days before Certification Test.~~ ~~Certification Test Report due 45 days after Certification Test.~~ ~~The Test Plan and Test Report must be submitted in a format specified by the commissioner. [Minn. R. 7017.1060, subp. 1-3, Minn. R. 7017.1080]~~
5.80.3	~~Continuous Operation: CEMS must be operated and data recorded during all periods of emission unit operation including periods of emission unit start-up, shutdown, or malfunction except for periods of acceptable monitor downtime. This requirement applies whether or not a numerical emission limit applies during these periods. A CEMS must not be bypassed except in emergencies where failure to bypass would endanger human health, safety, or plant equipment. [Minn. R. 7017.1090, Minn. Stat. 116.07, subd. 9(2)]~~
5.80.4	~~Monitoring Data: All data points collected by a CEMS shall be used to calculate individual hourly emission averages unless another applicable requirement requires more frequent averaging. Each hourly average starts at the beginning of the hour and ends at the beginning of the following hour.~~ ~~In order for an hour of data to be considered valid, it must contain the following minimum number of data points:~~ ~~A. four data points, equally spaced, if the emission unit operated during the entire hour;~~ ~~B. two data points, at least 15 minutes apart, during periods of monitor calibration or routine maintenance;~~ ~~C. one data point if the emission unit operated for 15 minutes or less during the hour.~~ ~~Monitoring data shall be recorded in the same units of measurement and averaging period as the facility's emission standard. [Minn. R. 7017.1160, Minn. Stat. 116.07, subd. 9(2)]~~
5.80.5	~~Certification Test Plan: The Permittee shall submit an approvable Certification Test Plan to the Commissioner that contains the following:~~ ~~1) Name and address of emission facility;~~ ~~2) Name, title, and telephone number of contact person at facility;~~ ~~3) Permit number or name and data of applicable compliance document requiring test;~~ ~~4) Statement of whether the test is an initial certification or a recertification;~~ ~~5) Drawing of the monitoring system which indicates the location of the reference method ports and monitoring system probe location in relation to the nearest flow disturbances both upstream and downstream of the monitoring system as well as any monitor bypass routes;~~ ~~6) Make, model, and serial number of the monitor and data recording system;~~ ~~7) Name and telephone number of testing company;~~ ~~8) Planned certification test date;~~ ~~9) List of the performance specifications from Code of Federal Regulations, title 40, part 60, appendix B, which will be followed during the test;~~ ~~10) List of the reference methods from Code of Federal Regulations, title 40, part 60, appendix A, which will be followed during the test;~~ ~~11) Units of measurement under which the monitor will be certified, for example, lb/hr, ppm, lb/MMBtu;~~ ~~12)~~1) ~~Monitoring system's span, range, and calibration levels; and~~

Commented [A329]: Delete the CEMS requirement. CEMS for STRU73 is not necessary nor useful. See comment letter for further information.

Requirement number	Requirement and citation
	~~13) Planned emission unit(s) operating range, for example, heat input, steam output, during the certification test. [Minn. R. 7017.1060, Minn. Stat. 116.07, subd. 9(2)]~~
5.80.6	~~QA Plan: Develop and implement a written quality assurance plan that covers each CEMS. The plan must be on site and available for inspection within 30 days after monitor certification. The plan must include the manufacturer's spare parts list for each CEMS and require that those parts be kept at the facility unless the Commissioner gives written approval to exclude specific spare parts from the list. [Minn. R. 7017.1170, subp. 2, Minn. Stat. 116.07, subd. 9(2)]~~
5.80.7	~~CEMS Daily Calibration Drift (CD) Test: The CD shall be quantified and recorded at zero (low level) and upscale (high level) gas concentrations at least once daily according to the procedures listed in Minn. R. 7017.1170, subp. 3(A) and (B), 40 CFR Section 60.13(d)(1) or 40 CFR pt. 75, Appendix B as applicable for each pollutant concentration, each diluent monitor, and for each monitor range. If no span value is specified in the applicable requirement or in a compliance document, the Permittee shall use a span value equivalent to 1.5 times the emission limit. [Minn. R. 7017.1170, subp. 3, Minn. Stat. 116.07, subd. 9(2)]~~
5.80.8	~~Relative Accuracy Test Audit (RATA) Notification: due 30 days before CEMS Relative Accuracy Test Audit (RATA). [Minn. R. 7017.1180, subp. 2, Minn. Stat. 116.07, subd. 9(2)]~~
5.80.9	~~CEMS Certification/Recertification Test: due 90 days after the first excess emissions report required for the CEMS or any change which invalidates the monitor's certification status as outlined in Minn. R. 7017.1050, subp. 2. [Minn. R. 7017.1050, subp. 1, Minn. Stat. 116.07, subd. 9(2)]~~
5.80.10	~~Recordkeeping: The owner or operator must retain records of all CEMS monitoring data and support information for a period of five years from the date of the monitoring sample, measurement or report. Records shall be kept at the source. [Minn. R. 7017.1130, Minn. Stat. 116.07, subd.9(2)]~~
EQUI 219	**Battery Terminal Post Coater 33**
5.81.1	At the time of permit issuance, EQUI 219 is a UV spray coater as described in Appendix B of this permit and shall comply with the requirements under COMG 1, COMG 2, and COMG 5. EQUI 219 may be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & (B) , Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.81.2	The Permittee shall vent emissions from EQUI 219 to control equipment meeting the requirements of TREA 58 whenever EQUI 219 operates. [Minn. R. 7007.0800, subps. 2(A) & (B) , Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 220	**Battery Terminal Post Coater 34**
5.82.1	At the time of permit issuance, EQUI 220 is a UV spray coater as described in Appendix B of this permit and shall comply with the requirements under COMG 1, COMG 2, and COMG 5. EQUI 220 may be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.82.2	The Permittee shall vent emissions from EQUI 220 to control equipment meeting the requirements of TREA 59 whenever EQUI 220 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
EQUI 221	**Tin Melt Pot**
5.83.1	The Permittee must limit Process Throughput <= 2500.0 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), ~~To~~ to avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]

Requirement number	Requirement and citation
5.83.2	Process Throughput: Daily Recordkeeping. On each day of operation, the Permittee shall calculate, record, and maintain a record of the total weight of tin material processed by EQUI 221. This shall be based on written usage logs. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.83.3	Particulate Matter: Daily Recordkeeping. By 4:30pm each operating day, the Permittee shall calculate and record the following: 1) The total weight of pure tin processed by EQUI 221 for the previous operating day using daily usage records; 2) The total PM10 emissions for the previous operating day using the formulas specified in this permit; and 3) The total PM2.5 emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.83.4	PM < 10 micron: Daily Calculation. The Permittee shall calculate PM10 emissions using the following equation: EQUI221PM10 = [A x B x (1-CE1)] / 24 Where: EQUI221PM10 = daily average PM10 emissions from EQUI 221, in pounds/hour; A = total weight of pure tin processed by EQUI 221 for the previous operating day, in pounds/day; and B = uncontrolled PM10 emission factor for EQUI 221 listed in Appendix D, as a fraction; and CE1 = minimum overall PM10 control efficiency required by COMG 11, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.83.5	PM < 2.5 micron: Daily Calculation. The Permittee shall calculate PM2.5 emissions using the following equation: EQUI221PM2.5 = [A x C x (1-CE2)] / 24 Where: EQUI221PM2.5 = daily average PM2.5 emissions from EQUI 221, in pounds/hour; A = total weight of pure tin processed by EQUI 221 for the previous operating day, in pounds/day; and C = uncontrolled PM2.5 emission factor for EQUI 221 listed in Appendix D, as a fraction; and CE2 = minimum overall PM2.5 control efficiency required by COMG 11, as a fraction. [Minn. R. 7007.0800, subps. 4-5]
5.83.6	The Permittee shall vent melt emissions from EQUI 221 to control equipment meeting the requirements of TREA 1 and TREA 60 operated in-series, and COMG 11 whenever EQUI 221 operates. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), t~~T~~o avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.83.7	The Permittee shall vent melt emissions from EQUI 221 to a stack/vent meeting the requirements of STRU 1 whenever EQUI 221 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.83.8	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead- containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-

Commented [A330]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Requirement number	Requirement and citation
	approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.83.9	~~PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.83.10	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.83.11	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM2.5 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.83.12	~~PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]~~
5.83.13	PM < 2.5 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
EQUI 223	**Coining Booth 1**
5.84.1	The Permittee must limit the daily operation of EQUI 223 to the period between 5 am and 11 pm. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
5.84.2	Daily Recordkeeping. On each day of operation, the Permittee shall record the time of the day when EQUI 223 was in operation. This shall be based on written usage logs. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
EQUI 224	**Coining Booth 2**
5.85.1	The Permittee must limit the daily operation of EQUI 224 to the period between 5 am and 11 pm. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]

Commented [A331]: Permittee needs an approvable test plan, not to submit a major permit application.

Commented [A332]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A333]: Permittee needs an approvable test plan, not to submit a major permit application.

5.93.2	Daily Recordkeeping. On each day of operation, the Permittee shall record the time of the day when EQUI 232 was in operation. This shall be based on written usage logs. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
EQUI 233	**Battery Terminal Post Coater 19**
5.94.1	The Permittee shall vent emissions from EQUI 233 to a stack/vent meeting the requirements of STRU 50 whenever EQUI 233 operates. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.94.2	At the time of permit issuance, EQUI 233 is a water-based dip coater as described in Appendix B of this permit and shall comply with requirements under COMG 1. EQUI 233 may only be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subps. 2(A) & (B) , Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.94.3	The Permittee shall apply water-based coating from EQUI 172 using dip or drip application methods only unless it is modified as authorized elsewhere in this permit. Spray application of coating while venting emissions to STRU 50 is prohibited. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
EQUI 240	**Prototype Coater**
5.95.1	The Permittee shall vent emissions from EQUI 240 to a stack/vent meeting the requirements of STRU 72 whenever EQUI 240 operates. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.95.2	At the time of permit issuance, EQUI 240 is a UV spray coater as described in Appendix B of this permit and shall comply with the requirements under COMG 1. EQUI 240 shall comply with the requirements under COMG 2 except for having to comply with the following: 1) operate with control equipment meeting the requirements in COMG 14; and 2) operate in a coating room meeting the requirements of COMG 5. EQUI 240 may be modified as authorized elsewhere in the permit. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Title I Condition: Avoid major source under 40 CFR 52.21(b)(1)(i) and Minn. R. 7007.3000, To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.95.3	The Permittee is prohibited from using any coating that contains any hazardous air pollutant (HAP), including the target HAPs as defined under 40 CFR Section 63.11180. [Minn. R. 7007.0800, subps. 2(A)]
5.95.4	Daily Recordkeeping. On each day of operation, the Permittee shall calculate, record, and maintain a record of the total quantity of each coating and other solids-containing material, including the solids content of each coating (as a mass fraction), used by EQUI 240 and the time-of-day EQUI 240 was in operation. This shall be based on written usage logs. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.95.5	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate, record, and maintain a record of the following for the previous operating day using the daily usage records: 1) Total weight of UV coating used by EQUI 240, in pounds/day; and 2) Daily average hourly emissions of PM10 and PM2.5 from EQUI 240 as determined elsewhere in this

Requirement number	Requirement and citation
	permit, in pounds/hour. This record shall also include solids contents of each material as determined by the Material Content requirement of this permit. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.95.6	PM < 10 micron: Daily Calculations. The Permittee shall calculate PM10 emissions from EQUI 240 using the following equations: EQUI240PM10 = I x J where: EQUI240PM10 = daily average PM10 emissions from EQUI 240, in pounds/hour; F = total weight of coating used in EQUI 240 based on daily usage logs, in pounds/day; and G = uncontrolled PM10 emission factor, in pounds PM10 per pound of coating, listed in Appendix B, as a fraction. Other uncontrolled emission factors allowed by this permit shall be based on the most recent MPCA-approved stack test results performed according to approved replicable methodology (ARM) requirements. [Minn. R. 7007.0800, subps. 4-5]
5.95.7	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate PM2.5 emissions from EQUI 240 using the following equations: EQUI240PM2.5 = I x K where: EQUI240PM2.5 = daily average PM2.5 emissions from EQUI 240, in pounds/hour; F = total weight of coating used in EQUI 240 based on daily usage logs, in pounds/day; and G = uncontrolled PM2.5 emission factor, in pounds PM2.5 per pound of coating, listed in Appendix B, as a fraction. Other uncontrolled emission factors allowed by this permit shall be based on the most recent MPCA-approved stack test results performed according to approved replicable methodology (ARM) requirements. [Minn. R. 7007.0800, subps. 4-5]
5.95.8	Maximum Contents of Materials and Process Rate: The Permittee assumed certain worst-case contents of materials and process rates when determining the short-term potential to emit of EQUI 240. These assumptions are listed in Appendix B of this permit. Increasing the process rate or changing to a material that has a higher content of any of the given pollutants, or an addition of a pollutant not listed in Appendix B, is considered a change in method of operation that must be evaluated under Minn. R. 7007.1200, subp. 3 to determine if a permit amendment or notification is required under Minn. R. 7007.1150. [Minn. R. 7005.0100, subps. 35a]
5.95.9	PM < 10 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM10 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM10 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM10 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]

Commented [A334]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Requirement number	Requirement and citation
5.95.10	PM < 10 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM10 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]
5.95.11	PM < 10 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.95.12	PM < 2.5 micron: Protocol for Re-Setting the Emission Factor Used For Calculating PM2.5 Emissions: The Permittee shall conduct performance testing under conditions that produce the maximum emission rate, using US EPA reference method 5 or 201A and 202 to measure the emission factor as required elsewhere in this permit. Another test method as approved by MPCA in the performance test plan may be used. The Permittee shall report the test result in pound PM2.5 per pound of lead-containing material in the performance test report required by Minn. R. 7017.2035, subp. 1. The emission factor used for calculating emissions shall be re-set to the 3-hour average emission rate in pound PM2.5 per pound of lead-containing material, measured during the most recent MPCA-approved emission factor performance test. The new emission factor used for calculating emissions determined using this Protocol shall be effective upon receipt of the Notice of Compliance (NOC) letter that approves the test results and shall be incorporated into the permit during the next permit amendment. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.95.13	PM < 2.5 micron: The Permittee must apply for and obtain a major permit amendment if the Permittee wishes to deviate from the Protocol for Re-setting the Emission Factor Used for Calculating PM2.5 Emissions established by this permit. [Minn. R. 7007.1500, subp. 1]
5.95.14	PM < 2.5 micron: Notwithstanding the Protocol detailed above, the MPCA reserves the right to set operational limits and requirements as allowed under Minn. R. 7017.2025. If the MPCA sets limits, the new limits shall be implemented upon receipt of the NOC letter that notifies the Permittee of preliminary approval. The limits set according to Minn. R. 7017.2025 are final upon issuance of a permit amendment incorporating the change. [Minn. R. 7017.2025]
5.95.15	The Permittee must limit the daily operation of EQUI 240 to the period between 5 am and 11 pm. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 1	**Smog Hog #15 Stack**
5.96.1	The Permittee shall limit emissions of PM < 10 micron <= 0.1012 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.96.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.1012 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.96.3	The Permittee shall limit emissions of Lead <= 0.00297 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.96.4	The Permittee shall limit emissions of Lead <= 1.0835 pounds per year 365-day rolling sum. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.96.5	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 1 for the previous operating day using the formulas specified in this permit; and

Commented [A335]: Allow Method 5 OR Method 201A. See previous comments on this issue.

Commented [A336]: Recordkeeping should be on EQUI level, not STRU level.

Requirement number	Requirement and citation
	2) The total daily average hourly PM2.5 emissions from STRU 1 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.96.6	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 1 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 1 for the previous 92-day period using formulas specified in this permit; and 3) The 365-day rolling sum annual lead emissions from STRU 1 for the previous 365-dayperiod using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.96.7	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 1 using the following equation: STRU1PM10 = EQUI101PM10 + EQUI102PM10 + EQUI103PM10 + EQUI104PM10 + EQUI221PM10 where: STRU1PM10 = total daily average PM10 emissions emitted through STRU 1 from EQUI 101, EQUI 102, EQUI 103, EQUI 104, and EQUI 221, in pounds/hour; EQUI101PM10 = total daily average PM10 stack emissions from EQUI 101, in pounds/hour; EQUI102PM10 = total daily average PM10 stack emissions from EQUI 102, in pounds/hour; EQUI103PM10 = total daily average PM10 stack emissions from EQUI 103, in pounds/hour; EQUI104PM10 = total daily average PM10 stack emissions from EQUI 104, in pounds/hour; and EQUI221PM10 = total daily average PM10 stack emissions from EQUI 221, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.96.8	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 1 using the following equation: STRU1PM2.5 = EQUI101PM2.5 + EQUI102PM2.5 + EQUI103PM2.5 + EQUI104PM2.5 + EQUI221PM2.5 where: STRU1PM2.5 = total daily average PM2.5 emissions emitted through STRU 1 from EQUI 101, EQUI 102, EQUI 103, EQUI 104, and EQUI 221, in pounds/hour; EQUI101PM2.5 = total daily average PM2.5 stack emissions from EQUI 101, in pounds/hour; EQUI102PM2.5 = total daily average PM2.5 stack emissions from EQUI 102, in pounds/hour; EQUI103PM2.5 = total daily average PM2.5 stack emissions from EQUI 103, in pounds/hour; EQUI104PM2.5 = total daily average PM2.5 stack emissions from EQUI 104, in pounds/hour; and EQUI221PM2.5 = total daily average PM2.5 stack emissions from EQUI 221, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.96.9	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 1 using the following equations: STRU1L = EQUI101L + EQUI102L + EQUI103L + EQUI 104L STRU1L3A = [(STRU1L2 + STRU1L3 + STRU1L4 +...+ STRU1L91 + STRU1L92 + STRU1L93) - STRU1L1] / 92 days where: STRU1L# = total daily lead emissions emitted through STRU 1 from EQUI 101, EQUI 102, EQUI 103,

Commented [A337]: Recordkeeping should be on EQUI level, not STRU level.

Requirement number	Requirement and citation
	and EQUI 104, in pounds/day; STRU1L3A = 92-day rolling average lead emissions emitted through STRU 1 from EQUI 101, EQUI 102, EQUI 103, and EQUI 104 for the previous 92-day period, in pounds/day; EQUI101L = total lead stack emissions from EQUI 101, in pounds/day; EQUI102L = total lead stack emissions from EQUI 102, in pounds/day; EQUI103L = total lead stack emissions from EQUI 103, in pounds/day; and EQUI104L = total lead stack emissions from EQUI 104, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.96.10	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 1 using the following equations: STRU1L = EQUI101L + EQUI102L + EQUI103L + EQUI104L STRU1L365S = (STRU1L2 + STRU1L3 + STRU1L4 +.... + STRU1L364+ STRU1L365+ STRU1L366) - STRU1L1 where: STRU1L# = daily lead emissions emitted through STRU 1 from EQUI 101, EQUI 102, EQUI 103, and EQUI 104, in pounds/day; STRU1L365S = 365-day rolling sum lead emissions emitted through STRU 1 from EQUI 101, EQUI 102, EQUI 103, and EQUI 104 for the previous 365-day period, in pounds/year; EQUI101L = total lead stack emissions from EQUI 101, in pounds/day; EQUI102L = total lead stack emissions from EQUI 102, in pounds/day; EQUI103L = total lead stack emissions from EQUI 103, in pounds/day; and EQUI104L = total lead stack emissions from EQUI 104, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.96.11	The Permittee is prohibited from releasing emissions of pollutants through STRU 1 from any emission units other than EQUI 101, EQUI 102, EQUI 103, EQUI 104, or EQUI 221 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp. 1(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 15	**Smog Hog #1 Stack**
5.97.1	The Permittee shall limit emissions of PM < 10 micron <= 0.03887 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.97.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.03887 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.97.3	The Permittee shall limit emissions of Lead <= 0.0230 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.97.4	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 15 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 15 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.97.5	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 15 the previous operating day using formulas specified in this

Commented [A338]: This provision is redundant to 5.96.9 and should be removed.

Requirement number	Requirement and citation
	permit; 2) The 92-day rolling average daily lead emissions from STRU 15 for the previous 92-day period using formulas specified in this permit; and 3) The 365-day rolling sum annual lead emissions from STRU 15 for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.97.6	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 15 using the following equation: STRU15PM10 = EQUI121PM10 + EQUI122PM10 + EQUI123PM10 where: STRU15PM10 = total daily average PM10 emissions emitted through STRU 15 from EQUI 121, EQUI 122, and EQUI 123 , in pounds/hour; EQUI121PM10 = total daily average PM10 stack emissions from EQUI 121, in pounds/hour; EQUI122PM10 = total daily average PM10 stack emissions from EQUI 122, in pounds/hour; and EQUI123PM10 = total daily average PM10 stack emissions from EQUI 123, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.97.7	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 15 using the following equation: STRU15PM2.5 = EQUI121PM2.5 + EQUI122PM2.5 + EQUI123PM2.5 where: STRU15PM2.5 = total daily average PM2.5 emissions emitted through STRU 15 from EQUI 121, EQUI 122, and EQUI 123, in pounds/hour; EQUI121PM2.5 = total daily average PM2.5 stack emissions from EQUI 121, in pounds/hour; EQUI122PM2.5 = total daily average PM2.5 stack emissions from EQUI 122, in pounds/hour; and EQUI123PM2.5 = total daily average PM2.5 stack emissions from EQUI 123, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.97.8	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 15 using the following equations: STRU15L = EQUI121L + EQUI122L + EQUI123L STRU15L3A = [(STRU15L2 + STRU15L3 + STRU15L4 +...+ STRU15L91 + STRU15L92 + STRU15L93) - STRU15L1] / 92 days where: STRU15L# = total daily lead emissions emitted through STRU 15 from EQUI 121, EQUI 122, and EQUI 123, in pounds/day; STRU15L3A = 92-day rolling average lead emissions emitted through STRU 15 from EQUI 121, EQUI 122, and EQUI 123 for the previous 92-day period, in pounds/day; EQUI121L = total lead stack emissions from EQUI 121, in pounds/day; EQUI122L = total lead stack emissions from EQUI 122, in pounds/day; and EQUI123L = total lead stack emissions from EQUI 123, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.97.9	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 15 using the

Requirement number	Requirement and citation
	following equations: STRU15L = EQUI121L + EQUI122L + EQUI123L STRU15L365S = (STRU15L2 + STRU15L3 + STRU15L4 +. . . + STRU15L364+ STRU15L365+ STRU15L366) - STRU15L1 where: STRU15L# = daily lead emissions emitted through STRU 15 from EQUI 121, EQUI 122, and EQUI 123, in pounds/day; STRU15L365S = 365-day rolling sum lead emissions emitted through STRU 15 from EQUI 121, EQUI 122, and EQUI 123 for the previous 365-day period, in pounds/year; EQUI121L = total lead stack emissions from EQUI 121, in pounds/day; EQUI122L = total lead stack emissions from EQUI 122, in pounds/day; and EQUI123L = total lead stack emissions from EQUI 123, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.97.10	The Permittee is prohibited from releasing emissions of pollutants through STRU 15 from any emission units other than EQUI 121, EQUI 122, or EQUI 123 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp, 1(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 16	**Smog Hog #2 Stack**
5.98.1	The Permittee shall limit emissions of PM < 10 micron <= 0.06388 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.98.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.06388 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.98.3	The Permittee shall limit emissions of Lead <= 0.03778 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.98.4	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 16 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 16 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.98.5	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 16 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 16 for the previous 92-day period using formulas specified in this permit; and 3) The 365-day rolling sum annual lead emissions from STRU 16 for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.98.6	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 16 using the following equation: STRU16PM10 = EQUI124PM10 + EQUI125PM10 + EQUI126PM10 + EQUI157PM10 where:

Requirement number	Requirement and citation
	STRU16PM10 = total daily average PM10 emissions emitted through STRU 16 from EQUI 124, EQUI 125, EQUI 126, and EQUI 157, in pounds/hour; EQUI124PM10 = total daily average PM10 stack emissions from EQUI 124, in pounds/hour; EQUI125PM10 = total daily average PM10 stack emissions from EQUI 125, in pounds/hour; EQUI126PM10 = total daily average PM10 stack emissions from EQUI 126, in pounds/hour; and EQUI157PM10 = total daily average PM10 stack emissions from EQUI 157, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.98.7	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 16 using the following equation: STRU16PM2.5 = EQUI124PM2.5 + EQUI125PM2.5 + EQUI126PM2.5 + EQUI157PM2.5 where: STRU16PM2.5 = total daily average PM2.5 emissions emitted through STRU 16 from EQUI 124, EQUI 125, EQUI 126, and EQUI 157, in pounds/hour; EQUI124PM2.5 = total daily average PM2.5 stack emissions from EQUI 124, in pounds/hour; EQUI125PM2.5 = total daily average PM2.5 stack emissions from EQUI 125, in pounds/hour; EQUI126PM2.5 = total daily average PM2.5 stack emissions from EQUI 126, in pounds/hour; and EQUI157PM2.5 = total daily average PM2.5 stack emissions from EQUI 157, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.98.8	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 16 using the following equations: STRU16L = EQUI124L + EQUI125L + EQUI126L + EQUI157L STRU16L3A = [(STRU16L2 + STRU16L3 + STRU16L4 +...+ STRU16L91 + STRU16L92 + STRU16L93) - STRU16L1] / 92 days where: STRU16L# = total daily lead emissions emitted through STRU 16 from EQUI 124, EQUI 125, EQUI 126, and EQUI 157, in pounds/day; STRU16L3A = 92-day rolling average lead emissions emitted through STRU 16 from EQUI 124, EQUI 125, EQUI 126, and EQUI 157 for the previous 92-day period, in pounds/day; EQUI124L = total lead stack emissions from EQUI 124, in pounds/day; EQUI125L = total lead stack emissions from EQUI 125, in pounds/day; EQUI126L = total lead stack emissions from EQUI 126, in pounds/day; and EQUI157L = total lead stack emissions from EQUI 157, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.98.9	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 16 using the following equations: STRU16L = EQUI124L + EQUI125L + EQUI126L + EQUI157L STRU16L365S = (STRU16L2 + STRU16L3 + STRU16L4 +.... + STRU16L364 + STRU16L365 + STRU16L366) - STRU16L1 where: STRU16L# = daily lead emissions emitted through STRU 16 from EQUI 124, EQUI 125, EQUI 126, and

Requirement number	Requirement and citation
	EQUI 157, in pounds/day; STRU16L365S = 365-day rolling sum lead emissions emitted through STRU 16 from EQUI 124, EQUI 125, EQUI 126, and EQUI 157 for the previous 365-day period, in pounds/year; EQUI124L = total lead stack emissions from EQUI 124, in pounds/day; EQUI125L = total lead stack emissions from EQUI 125, in pounds/day; EQUI126L = total lead stack emissions from EQUI 126, in pounds/day; and EQUI157L = total lead stack emissions from EQUI 157, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.98.10	The Permittee is prohibited from releasing emissions of pollutants through STRU 16 from any emission units other than EQUI 124, EQUI 125, EQUI 126, or EQUI 157 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp, 1(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 17	**Smog Hog #3 Stack**
5.99.1	The Permittee shall limit emissions of PM < 10 micron <= 0.01864 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.99.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.01864 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.99.3	The Permittee shall limit emissions of Lead <= 0.01103 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.99.4	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 17 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 17 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.99.5	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 17 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 17 for the previous 92-day period using formulas specified in this permit; and 3) The 365-day rolling sum annual lead emissions from STRU 17 for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.99.6	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 17 using the following equation: STRU17PM10 = EQUI127PM10 + EQUI128PM10 + EQUI129PM10 where: STRU17PM10 = total daily average PM10 emissions emitted through STRU 17 from EQUI 127, EQUI 128, and EQUI 129, in pounds/hour; EQUI127PM10 = total daily average PM10 stack emissions from EQUI 127, in pounds/hour; EQUI128PM10 = total daily average PM10 stack emissions from EQUI 128, in pounds/hour; and

Requirement number	Requirement and citation
	EQUI129PM10 = total daily average PM10 stack emissions from EQUI 129, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.99.7	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 17 using the following equation: STRU17PM2.5 = EQUI127PM2.5 + EQUI128PM2.5 + EQUI129PM2.5 where: STRU17PM2.5 = total daily average PM2.5 emissions emitted through STRU 17 from EQUI 127, EQUI 128, and EQUI 129, in pounds/hour; EQUI127PM2.5 = total daily average PM2.5 stack emissions from EQUI 127, in pounds/hour; EQUI128PM2.5 = total daily average PM2.5 stack emissions from EQUI 128, in pounds/hour; and EQUI129PM2.5 = total daily average PM2.5 stack emissions from EQUI 129, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.99.8	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 17 using the following equations: STRU17L = EQUI127L + EQUI128L + EQUI129L STRU17L3A = [(STRU17L2 + STRU17L3 + STRU17L4 +...+ STRU17L91 + STRU17L92 + STRU17L93) - STRU17L1] / 92 days where: STRU17L# = total daily lead emissions emitted through STRU 17, in pounds /day; STRU17L3A = 92-day rolling average lead emissions emitted through STRU 17 for the previous 92-day period, in pounds/day; EQUI127L = total lead stack emissions from EQUI 127, in pounds/day; EQUI128L = total lead stack emissions from EQUI 128, in pounds/day; and EQUI129L = total lead stack emissions from EQUI 129, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.99.9	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 17 using the following equations: STRU17L = EQUI127L + EQUI128L + EQUI129L STRU17L365S = (STRU17L2 + STRU17L3 + STRU17L4 +.... + STRU17L364 + STRU17L365 + STRU17L366) - STRU17L1 where: STRU17L# = daily lead emissions emitted through STRU 17, in pounds/day; STRU17L365S = 365-day rolling sum lead emissions emitted through STRU 17 for the previous 365-day period, in pounds/year; EQUI127L = total lead stack emissions from EQUI 127, in pounds/day; EQUI128L = total lead stack emissions from EQUI 128, in pounds/day; and EQUI129L = total lead stack emissions from EQUI 129, in pounds/day. STRU 24	**Smog Hog #10 Stack**
5.102.1	The Permittee shall limit emissions of PM < 10 micron <= 0.02202 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.102.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.02202 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.102.3	The Permittee shall limit emissions of Lead <= 0.01302 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.102.4	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 24 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 24 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.102.5	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 24 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 24 for the previous 92-day period using formulas specified in this permit; and 3) The 365-day rolling sum annual lead emissions from STRU 24 for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.102.6	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 24 using the following equation: STRU24PM10 = EQUI137PM10 + EQUI138PM10 where: STRU24PM10 = total daily average PM10 emissions emitted through STRU 24, in pounds/hour; EQUI137PM10 = total daily average PM10 stack emissions from EQUI 137, in pounds/hour; and EQUI138PM10 = total daily average PM10 stack emissions from EQUI 138, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.102.7	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 24 using the following equation:

Requirement number	Requirement and citation
	STRU24PM2.5 = EQUI137PM2.5 + EQUI138PM2.5 where: STRU24PM2.5 = total daily average PM2.5 emissions emitted through STRU 24, in pounds/hour; EQUI137PM2.5 = total daily average PM2.5 stack emissions from EQUI 137, in pounds/hour; and EQUI138PM2.5 = total daily average PM2.5 stack emissions from EQUI 138, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.102.8	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 24 using the following equations: STRU24L = EQUI137L + EQUI138L STRU24L3A = [(STRU24L2 + STRU24L3 + STRU24L4 +...+ STRU24L91 + STRU24L92 + STRU24L93) - STRU24L1] / 92 days where: STRU24L# = total daily lead emissions emitted through STRU 24, in pounds/day; STRU24L3A = 92-day rolling average lead emissions emitted through STRU 24 for the previous 92-day period, in pounds/day; EQUI137L = total lead stack emissions from EQUI 137, in pounds/day; and EQUI138L = total lead stack emissions from EQUI 138, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.102.9	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 24 using the following equations: STRU24L = EQUI137L + EQUI138L STRU24L365S = (STRU24L2 + STRU24L3 + STRU24L4 +.... + STRU24L364 + STRU24L365 + STRU24L366) - STRU24L1 where: STRU24L# = total daily lead emissions emitted through STRU 24, in pounds/day; STRU24L365S = 365-day rolling sum lead emissions emitted through STRU 24 for the previous 365-day period, in pounds/year; EQUI137L = total lead stack emissions from EQUI 137, in pounds/day; and EQUI138L = total lead stack emissions from EQUI 138, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.102.10	The Permittee is prohibited from releasing emissions of pollutants through STRU 24 from any emission units other than EQUI 137 or EQUI 138 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp. 1(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 25	**Smog Hog #11 Stack**
5.103.1	The Permittee shall limit emissions of PM < 10 micron <= 0.02641 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]

Requirement number	Requirement and citation
5.103.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.02641 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.103.3	The Permittee shall limit emissions of Lead <= 0.01562 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.103.4	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 25 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 25 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.103.5	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 25 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 25 for the previous 92-day period using formulas specified in this permit; and 3) The 365-day rolling sum annual lead emissions from STRU 25 for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.103.6	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 25 using the following equation: STRU25PM10 = EQUI139PM10 + EQUI140PM10 where: STRU25PM10 = total daily average PM10 emissions emitted through STRU 25, in pounds/hour; EQUI139PM10 = total daily average PM10 stack emissions from EQUI 139, in pounds/hour; and EQUI140PM10 = total daily average PM10 stack emissions from EQUI 140, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.103.7	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 25 using the following equation: STRU25PM2.5 = EQUI139PM2.5 + EQUI140PM2.5 where: STRU25PM2.5 = total daily average PM2.5 emissions emitted through STRU 25, in pounds/hour; EQUI139PM2.5 = total daily average PM2.5 stack emissions from EQUI 139, in pounds/hour; and EQUI140PM2.5 = total daily average PM2.5 stack emissions from EQUI 140, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.103.8	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 25 using the following equations: STRU25L = EQUI139L + EQUI140L STRU25L3A = [(STRU25L2 + STRU25L3 + STRU25L4 +...+ STRU25L91 + STRU25L92 + STRU25L93) - STRU25L1] / 92 days where:

Requirement number	Requirement and citation
	STRU25L# = total daily lead emissions emitted through STRU 25, in pounds/day; STRU25L3A = 92-day rolling average lead emissions emitted through STRU 25 for the previous 92-day period, in pounds/day; EQUI139L = total lead stack emissions from EQUI 139, in pounds/day; and EQUI140L = total lead stack emissions from EQUI 140, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.103.9	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 25 using the following equations: STRU25L = EQUI139L + EQUI140L STRU25L365S = (STRU25L2 + STRU25L3 + STRU25L4 +.... + STRU25L364 + STRU25L365 + STRU25L366) - STRU25L1 where: STRU25L# = total daily lead emissions emitted through STRU 25, in pounds/day; STRU25L365S = 365-day rolling sum lead emissions emitted through STRU 25 for the previous 365-day period, in pounds/year; EQUI139L = total lead stack emissions from EQUI 139, in pounds/day; and EQUI140L = total lead stack emissions from EQUI 140, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.103.10	The Permittee is prohibited from releasing emissions of pollutants through STRU 25 from any emission units other than EQUI 139 or EQUI 140 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp. 1(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 26	**Smog Hog #12 Stack**
5.104.1	The Permittee shall limit emissions of PM < 10 micron <= 0.05521 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.104.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.05521 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.104.3	The Permittee shall limit emissions of Lead <= 0.03265 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.104.4	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 26 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 26 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.104.5	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 26 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 26 for the previous 92-day period using formulas specified in this permit; and

Requirement number	Requirement and citation
	3) The 365-day rolling sum annual lead emissions from STRU 26 for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.104.6	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 26 using the following equation: STRU26PM10 = EQUI141PM10 + EQUI142PM10 + EQUI143PM10 + EQUI155PM10 where: STRU26PM10 = total daily average PM10 emissions emitted through STRU 26, in pounds/hour; EQUI141PM10 = total daily average PM10 stack emissions from EQUI 141, in pounds/hour; EQUI142PM10 = total daily average PM10 stack emissions from EQUI 142, in pounds/hour; EQUI143PM10 = total daily average PM10 stack emissions from EQUI 143, in pounds/hour; and EQUI155PM10 = total daily average PM10 stack emissions from EQUI 155, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.104.7	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 26 using the following equation: STRU26PM2.5 = EQUI141PM2.5 + EQUI142PM2.5 + EQUI143PM2.5 + EQUI155PM2.5 where: STRU26PM2.5 = total daily average PM2.5 emissions emitted through STRU 26, in pounds/hour; EQUI141PM2.5 = total daily average PM2.5 stack emissions from EQUI 141, in pounds/hour; EQUI142PM2.5 = total daily average PM2.5 stack emissions from EQUI 142, in pounds/hour; EQUI143PM2.5 = total daily average PM2.5 stack emissions from EQUI 143, in pounds/hour; and EQUI155PM2.5 = total daily average PM2.5 stack emissions from EQUI 155, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.104.8	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 26 using the following equations: STRU26L = EQUI141L + EQUI142L + EQUI143L + EQUI155L STRU26L3A = [(STRU26L2 + STRU26L3 + STRU26L4 +...+ STRU26L91 + STRU26L92 + STRU26L93) - STRU26L1] / 92 days where: STRU26L# = total daily lead emissions emitted through STRU 26, in pounds/day; STRU26L3A = 92-day rolling average lead emissions emitted through STRU 26 for the previous 92-day period, in pounds/day; EQUI141L = total lead stack emissions from EQUI 141, in pounds/day; EQUI142L = total lead stack emissions from EQUI 142, in pounds/day; EQUI143L = total lead stack emissions from EQUI 143, in pounds/day; and EQUI155L = total lead stack emissions from EQUI 155, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.104.9	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 26 using the following equations: STRU26L = EQUI141L + EQUI142L + EQUI143L + EQUI155L

Requirement number	Requirement and citation
	STRU26L365S = (STRU26L2 + STRU26L3 + STRU26L4 +.... + STRU26L364 + STRU26L365 + STRU26L366) - STRU26L1 where: STRU26L# = daily lead emissions emitted through STRU 26, in pounds/day; STRU26L365S = 365-day rolling sum lead emissions emitted through STRU 26 for the previous 365-day period, in pounds/year; EQUI141L = total lead stack emissions from EQUI 142, in pounds/day; EQUI142L = total lead stack emissions from EQUI 142, in pounds/day; EQUI143L = total lead stack emissions from EQUI 143, in pounds/day; and EQUI155L = total lead stack emissions from EQUI 155, in pounds/day. 5.106.1	The Permittee shall limit emissions of PM < 10 micron <= 0.02982 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.106.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.02982 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.106.3	The Permittee shall limit emissions of Lead <= 0.01764 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.106.4	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 31 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 31 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.106.5	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 31 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 31 for the previous 92-day period using formulas specified in this permit; and 3) The 365-day rolling sum annual lead emissions from STRU 31 for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.106.6	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 31 using the following equation: STRU31PM10 = EQUI147PM10 where: STRU31PM10 = total daily average PM10 emissions emitted through STRU 31, in pounds/hour; and EQUI147PM10 = total daily average PM10 stack emissions from EQUI 147, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.106.7	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 31 using the following equation: STRU31PM2.5 = EQUI147PM2.5 where: STRU31PM2.5 = total daily average PM2.5 emissions emitted through STRU 31, in pounds/hour; and EQUI147PM2.5 = total daily average PM2.5 stack emissions from EQUI 147, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.106.8	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 31 using the following equations: STRU31L = EQUI147L STRU31L3A = [(STRU31L2 + STRU31L3 + STRU31L4 +...+ STRU31L91 + STRU31L92 + STRU31L93) - STRU31L1] / 92 days

Requirement number	Requirement and citation
	where: STRU31L# = total daily lead emissions emitted through STRU 31, in pounds/day; STRU31L3A = 92-day rolling average lead emissions emitted through STRU 31 for the previous 92-day period, in pounds/day; and EQUI147L = total lead stack emissions from EQUI 147, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.106.9	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 31 using the following equations: STRU31L = EQUI147L STRU31L365S = (STRU31L2 + STRU31L3 + STRU31L4 +.... + STRU31L364 + STRU31L365 + STRU31L366) - STRU31L1 where: STRU31L# = total daily lead emissions emitted through STRU 31, in pounds/day; STRU31L365S = 365-day rolling sum lead emissions emitted through STRU 31 for the previous 365-day period, in pounds/year; and EQUI147L = total lead stack emissions from EQUI 147, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.106.10	The Permittee is prohibited from releasing emissions of pollutants through STRU 31 from any emission units other than EQUI 147 obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp. 1(A) &(B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 32	**Smog Hog #18 Stack**
5.107.1	The Permittee shall limit emissions of PM < 10 micron <= 0.03007 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.107.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.03007 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.107.3	The Permittee shall limit emissions of Lead <= 0.01788 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.107.4	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 32 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 32 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.107.5	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 32 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 32 for the previous 92-day period using formulas specified in this permit; and

Requirement number	Requirement and citation
	3) The 365-day rolling sum annual lead emissions from STRU 32 for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.107.6	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 32 using the following equation: STRU32PM10 = EQUI149PM10 + EQUI150PM10 where: STRU32PM10 = total daily average PM10 emissions emitted through STRU 32, in pounds/hour; EQUI149PM10 = total daily average PM10 stack emissions from EQUI 149, in pounds/hour; and EQUI150PM10 = total daily average PM10 stack emissions from EQUI 150, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.107.7	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 32 using the following equation: STRU32PM2.5 = EQUI149PM2.5 + EQUI150PM2.5 where: STRU32PM2.5 = total daily average PM2.5 emissions emitted through STRU 32, in pounds/hour; EQUI149PM2.5 = total daily average PM2.5 stack emissions from EQUI 149, in pounds/hour; and EQUI150PM2.5 = total daily average PM2.5 stack emissions from EQUI 150, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.107.8	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 32 using the following equations: STRU32L = EQUI146L + EQUI158L STRU32L3A = [(STRU32L2 + STRU32L3 + STRU32L4 +...+ STRU32L91 + STRU32L92 + STRU32L93) - STRU32L1] / 92 days where: STRU32L# = total daily lead emissions emitted through STRU 32, in pounds/day; STRU32L3A = 92-day rolling average lead emissions emitted through STRU 32 for the previous 92-day period, in pounds/day; EQUI149L = total lead stack emissions from EQUI 149, in pounds/day; and EQUI150L = total lead stack emissions from EQUI 150, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.107.9	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 32 using the following equations: STRU32L = EQUI149L + EQUI150L STRU32L365S = (STRU32L2 + STRU32L3 + STRU32L4 +.... + STRU32L364 + STRU32L365 + STRU32L366) - STRU32L1 where: STRU32L# = total daily lead emissions emitted through STRU 32, in pounds/day; STRU32L365S = 365-day rolling sum lead emissions emitted through STRU 32 for the previous 365-day

Requirement number	Requirement and citation
	period, in pounds/year; EQUI149L = total lead stack emissions from EQUI 149, in pounds/day; and EQUI150L = total lead stack emissions from EQUI 150, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.107.10	The Permittee is prohibited from releasing emissions of pollutants through STRU 32 from any emission units other than EQUI 149 or EQUI 150 obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp. 1(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 33	**Smog Hog #19 Stack**
5.108.1	The Permittee shall limit emissions of PM < 10 micron <= 0.05370 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]

STRU 41	**Solvent Vapor Remediation System Stack**
5.111.1	The Permittee shall limit emissions of 1,2-(trans-) Dichloroethylene <= 0.0010 pounds per hour 3-hour average. This emission rate represents uncontrolled emission rates used in modeling and AERA analysis. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)& 9(2), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.111.2	The Permittee shall limit emissions of Trichloroethylene (TCE) <= 0.00006 pounds per hour from EQUI 167. This emission rate represents uncontrolled emission rates used in modeling and AERA analysis. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)& 9(2), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.111.3	The Permittee is prohibited from releasing emissions of pollutants through STRU 41 from any emission units other than EQUI 167 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp. (A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 43	**Exhaust fan #7**
5.112.1	The Permittee shall limit emissions of PM < 10 micron <= 0.01896 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.112.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.01896 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.112.3	The Permittee shall limit emissions of Lead <= 0.~~01488~~ 0.001418 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.112.4	The Permittee shall limit emissions of Nitrogen Oxides <= 0.1826 pounds per hour 1-hour average This is the emission rate used in modeling and it represents the contributions from EQUI 106 and 109. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.112.5	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 43 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 43 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.112.6	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 43 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 43 for the previous 92-day period using formulas specified in this permit; and 3) The 365-day rolling sum annual die casting lead emissions from STRU 43 diecast emissions for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.112.7	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 43 using the following equation: STRU43PM10 = EQUI124FPM10 + 0.014 + 0.00021 where:

Commented [A341]: Listed emission rate does not reflect final modeling.

Commented [A342]: The annual lead limit through STRU 43 is redundant and unnecessary to show compliance with risk thresholds. The limit is at the COMG 12 level and only requires tracking the STRU 43 emissions from the diecast operations.

Commented [A343]: This requirement is not necessary. Emissions from diecast machines are being calculated on the EQUI level.

Requirement number	Requirement and citation
	STRU43PM10 = total daily average PM10 emissions emitted through STRU 43, in pounds/hour; and EQUI124FPM10 = total daily average uncaptured PM10 emissions from EQUI 124, in pounds/hour 0.014 = total daily average PM10 emission contribution from EQUI106 and EQUI109, in pounds/hr; and 0.00021 = total daily average PM10 emission contribution from EQUI115, in pounds/hr. [Minn. R. 7007.0800, subps. 4-5]
5.112.8	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 43 using the following equation: STRU43PM2.5 = EQUI124FPM2.5 + 0.014 + 0.00021 where: STRU43PM2.5 = total daily average PM2.5 emissions emitted through STRU 43, in pounds/hour; and EQUI124FPM2.5 = total daily average uncaptured PM2.5 emissions from EQUI 124, in pounds/hour. 0.014 = total daily average PM2.5 emission contribution from EQUI106 and EQUI109, in pounds/hr; and 0.00021 = total daily average PM2.5 emission contribution from EQUI115, in pounds/hr. [Minn. R. 7007.0800, subps. 4-5]
5.112.9	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 43 using the following equations: STRU43L = EQUI124FL + 0.00011 STRU43L3A = [(STRU43L2 + STRU43L3 + STRU43L4 + . . . + STRU43L91 + STRU43L92 + STRU43L93) - STRU43L1] / 92 days where: STRU43L# = total daily lead emissions emitted through STRU 43, in pounds/day; STRU43L3A = 92-day rolling average lead emissions emitted through STRU 43 for the previous 92-day period, in pounds/day; EQUI124FL = total uncaptured lead emissions from EQUI 124, in pounds/day; and 0.00011 = lead emission contribution from EQUI115, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.112.10	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 43 using the following equations: STRU43L = EQUI124FL STRU43L365S = (STRU43L2 + STRU43L3 + STRU43L4 + . . . + STRU43L364 + STRU43L365 + STRU43L366) - STRU43L1 where: STRU43L# = total daily lead emissions emitted through STRU 43, in pounds/day; STRU43L365S = 365-day rolling sum lead emissions emitted through STRU 43 for the previous 365-day period, in pounds/year; and EQUI124FL = total uncaptured lead emissions from EQUI 124, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.112.11	The Permittee is prohibited from releasing emissions of pollutants through STRU 43 from any emission units other than EQUI 106, EQUI 109, EQUI 115, and EQUI 124 without obtaining a major

Commented [A344]: See previous comment on formula.

Commented [A345]: Unnecessary requirement. See previous comment.

Commented [A346]: See previous comment on formula.

Commented [A347]: Unnecessary requirement. See previous comment.

Commented [A348]: See previous comment on formula.

STRU 44	**Exhaust fan #1**
5.113.1	The Permittee shall limit emissions of PM < 10 micron <= 0.07081 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.113.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.07081 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.113.3	The Permittee shall limit emissions of Lead <= 0.01061 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.113.4	The Permittee shall limit emissions of Nitrogen Oxides <= 0.4070 pounds per hour 1-hour average This is the emission rate used in modeling and it represents the contributions from EQUI 107, EQUI 108 and EQUI 111. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.113.5	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 44 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 44 diecast emissions for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.113.6	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 44 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 44 for the previous 92-day period using formulas specified in this permit; and 3) The 365-day rolling sum annual die casting lead emissions from STRU 44 for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.113.7	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 44 using the following equation: STRU44PM10 = EQUI130FPM10 + EQUI131FPM10 + EQUI132FPM10 + EQUI133FPM10 + EQUI134FPM10 + EQUI135FPM10 + EQUI136FPM10+ 0.03093 where: STRU44PM10 = total daily average PM10 emissions emitted through STRU 44, in pounds/hour; EQUI130FPM10 = total daily average uncaptured PM10 emissions from EQUI 130, in pounds/hour; EQUI131FPM10 = total daily average uncaptured PM10 emissions from EQUI 131, in pounds/hour; EQUI132FPM10 = total daily average uncaptured PM10 emissions from EQUI 132, in pounds/hour; EQUI133FPM10 = total daily average uncaptured PM10 emissions from EQUI 133, in pounds/hour; EQUI134FPM10 = total daily average uncaptured PM10 emissions from EQUI 134, in pounds/hour; EQUI135FPM10 = total daily average uncaptured PM10 emissions from EQUI 135, in pounds/hour; EQUI136FPM10 = total daily average uncaptured PM10 emissions from EQUI 136, in pounds/hour; and

Commented [A349]: The annual lead limit through STRU 44 is redundant and unnecessary to show compliance with risk thresholds. The limit is at the COMG 12 level and only requires tracking the STRU 44 emissions from the diecast operations.

Commented [A350]: These are only the diecast emissions from STRU 44. This requirement is unnecessary. The EQUI-level recordkeeping is sufficient.

Requirement number	Requirement and citation
	0.03093 = total daily average PM10 emission contribution from EQUI 107, EQUI 108 and EQUI 111, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.113.8	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 44 using the following equation: STRU44PM2.5 = EQUI130FPM2.5 + EQUI131FPM2.5 + EQUI132FPM2.5 + EQUI133FPM2.5 + EQUI134FPM2.5 + EQUI135FPM2.5 + EQUI136FPM2.5+ 0.03093 where: STRU44PM2.5 = total daily average PM2.5 emissions emitted through STRU 44, in pounds/hour; EQUI130FPM2.5 = total daily average uncaptured PM2.5 emissions from EQUI 130, in pounds/hour; EQUI131FPM2.5 = total daily average uncaptured PM2.5 emissions from EQUI 131, in pounds/hour; EQUI132FPM2.5 = total daily average uncaptured PM2.5 emissions from EQUI 132, in pounds/hour; EQUI133FPM2.5 = total daily average uncaptured PM2.5 emissions from EQUI 133, in pounds/hour; EQUI134FPM2.5 = total daily average uncaptured PM2.5 emissions from EQUI 134, in pounds/hour; EQUI135FPM2.5 = total daily average uncaptured PM2.5 emissions from EQUI 135, in pounds/hour; EQUI136FPM2.5 = total daily average uncaptured PM2.5 emissions from EQUI 136, in pounds/hour; and 0.03093 = total daily average PM2.5 emission contribution from EQUI 107, EQUI 108 and EQUI 111, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.113.9	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 44 using the following equations: STRU44L = EQUI130FL + EQUI131FL + EQUI132FL + EQUI133FL + EQUI134FL + EQUI135FL + EQUI136FL STRU44L3A = [(STRU44L2 + STRU44L3 + STRU44L4 + . . . + STRU44L91 + STRU44L92 + STRU44L93) - STRU44L1] / 92 days where: STRU44L# = total daily lead emissions emitted through STRU 44, in pounds/day; STRU44L3A = 92-day rolling average lead emissions emitted through STRU 44 for the previous 92-day period, in pounds/day; EQUI130FL = total uncaptured lead emissions from EQUI 130, in pounds/day; EQUI131FL = total uncaptured lead emissions from EQUI 131, in pounds/day; EQUI132FL = total uncaptured lead emissions from EQUI 132, in pounds/day; EQUI133FL = total uncaptured lead emissions from EQUI 133, in pounds/day; EQUI134FL = total uncaptured lead emissions from EQUI 134, in pounds/day; EQUI135FL = total uncaptured lead emissions from EQUI 135, in pounds/day; and EQUI136FL = total uncaptured lead emissions from EQUI 136, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.113.10	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 44 using the following equations: STRU44L = EQUI130FL + EQUI131FL + EQUI132FL + EQUI133FL + EQUI134FL + EQUI135FL + EQUI136FL STRU44L365S = (STRU44L2 + STRU44L3 + STRU44L4 + . . . +STRU44L364 + STRU44L365 + STRU44L366) - STRU44L1 where:

Commented [A351]: See previous comment. This requirement is unnecessary. The EQUI-level recordkeeping is sufficient.

Commented [A352]: See previous comment: unnecessary requirement and wrong formula. To the extent these are retained, all of the Exhaust Fan emission formulas should be compared to the final Form GI-07.

Commented [A353]: See previous comment: unnecessary requirement and wrong formula. To the extent these are retained, all of the Exhaust Fan emission formulas should be compared to the final Form GI-07.

Requirement number	Requirement and citation
	STRU44L# = total daily lead emissions emitted through STRU 44, in pounds/day; STRU44L365S = 365-day rolling sum lead emissions emitted through STRU 44 for the previous 365-day period, in pounds/year; EQUI130FL = total uncaptured lead emissions from EQUI 130, in pounds/day; EQUI131FL = total uncaptured lead emissions from EQUI 131, in pounds/day; EQUI132FL = total uncaptured lead emissions from EQUI 132, in pounds/day; EQUI133FL = total uncaptured lead emissions from EQUI 133, in pounds/day; EQUI134FL = total uncaptured lead emissions from EQUI 134, in pounds/day; EQUI135FL = total uncaptured lead emissions from EQUI 135, in pounds/day; and EQUI136FL = total uncaptured lead emissions from EQUI 136, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.113.11	The Permittee is prohibited from releasing emissions of pollutants through STRU 44 from any emission units other than EQUI 107, EQUI 108, EQUI 111, EQUI 130, EQUI 131, EQUI 132, EQUI 133, EQUI 134, EQUI 135, or EQUI 136 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp. 1(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 45	**Exhaust fan #2**
5.114.1	The Permittee shall limit emissions of PM < 10 micron <= 0.05712 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.114.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.05712 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.114.3	The Permittee shall limit emissions of Lead <= 0.006982 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.114.4	The Permittee shall limit emissions of Nitrogen Oxides <= 0.4069 pounds per hour 1-hour average This is the emission rate used in modeling and it represents the contributions from EQUI 107, EQUI 108 and EQUI 111. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.114.5	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 45 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 45 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.114.6	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 45 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 45 for the previous 92-day period using formulas specified in this permit; and 3) The 365-day rolling sum annual die casting lead emissions from STRU 45 diecast emissions for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.114.7	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 45 using the following equation: STRU45PM10 = EQUI137FPM10 + EQUI138FPM10 + EQUI139FPM10 + EQUI140FPM10 + EQUI141FPM10+ 0.03093

Commented [A354]: Unnecessary requirement: EQUI-level recordkeeping and emission calculations are sufficient. Also, this formula is wrong: MAUs also vent through STRU 45.

[Minn. R. 7007.0800, subps. 4-5]

Commented [A375]: Recordkeeping should be on the EQUI level, not STRU level.

Commented [A376]: Delete this requirement. See above: unnecessary requirement. To the extent these are retained, all of the Exhaust Fan emission formulas should be compared to the final Form GI-07.

Requirement number	Requirement and citation
5.117.8	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 48 using the following equation: STRU48PM2.5 = EQUI121FPM2.5 + EQUI122FPM2.5 + 0.01338 where: STRU48PM2.5 = total daily average PM2.5 emissions emitted through STRU 48, in pounds/hour; EQUI121FPM2.5 = total daily average uncaptured PM2.5 emissions from EQUI 121, in pounds/hour; EQUI122FPM2.5 = total daily average uncaptured PM2.5 emissions from EQUI 122, in pounds/hour; and 0.01338 = total daily average PM2.5 emission contribution from EQUI 106 and EQUI 109, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.117.9	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 48 using the following equations: STRU48L = EQUI121FL + EQUI122FL STRU48L3A = [(STRU48L2 + STRU48L3 + STRU48L4 +...+ STRU48L91 + STRU48L92 + STRU48L93) - STRU48L1] / 92 days where: STRU48L# = total daily lead emissions emitted through STRU 48, in pounds/day; STRU48L3A = 92-day rolling average lead emissions emitted through STRU 48 for the previous 92-day period, in pounds/day; EQUI121FL = total uncaptured lead emissions from EQUI 121, in pounds/day; and EQUI122FL = total uncaptured lead emissions from EQUI 122, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.117.10	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 48 using the following equations: STRU48L = EQUI121FL + EQUI122FL STRU48L365S = (STRU48L2 + STRU48L3 + STRU48L4 +...+ STRU48L364 + STRU48L365 + STRU48L366) - STRU48L1 where: STRU48L# = total daily lead emissions emitted through STRU 48, in pounds/day; STRU48L365S = 365-day rolling sum lead emissions emitted through STRU 48 for the previous 365-day period, in pounds/year; EQUI121FL = total uncaptured lead emissions from EQUI 121, in pounds/day; and EQUI122FL = total uncaptured lead emissions from EQUI 122, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.117.11	The Permittee is prohibited from releasing emissions of pollutants through STRU 48 from any emission units other than EQUI 106, EQUI 109, EQUI 121 or EQUI 122 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp. 1(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 49	**Exhaust fan #6**

Commented [A377]: Delete this requirement. See above: unnecessary requirement. To the extent these are retained, all of the Exhaust Fan emission formulas should be compared to the final Form GI-07.

Commented [A378]: Delete this requirement. See above: unnecessary requirement. To the extent these are retained, all of the Exhaust Fan emission formulas should be compared to the final Form GI-07.

Commented [A379]: Redundant to 5.117.9. Delete this requirement. See above: unnecessary requirement. To the extent these are retained, all of the Exhaust Fan emission formulas should be compared to the final Form GI-07.

5.120.10	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 51 using the following equations: STRU51L = EQUI149FL + EQUI152FL + EQUI154FL + EQUI156FL STRU51L365S = (STRU51L2 + STRU51L3 + STRU51L4 +...+ STRU51L364 + STRU51L365 + STRU51L366) - STRU51L1 where: STRU51L# = total daily lead emissions emitted through STRU 51, in pounds/day; STRU51L365S = 365-day rolling sum lead emissions emitted through STRU 51 for the previous 365-day period, in pounds/year; EQUI149FL = total uncaptured lead emissions from EQUI 149, in pounds/day; EQUI152FL = total uncaptured lead emissions from EQUI 152, in pounds/day; EQUI154FL = total uncaptured lead emissions from EQUI 154, in pounds/day; and EQUI156FL = total uncaptured lead emissions from EQUI 156, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.120.11	The Permittee is prohibited from releasing emissions of pollutants through STRU 51 from any emission units other than EQUI 110, EQUI 112, EQUI 149, EQUI 152, EQUI 154, or EQUI 156 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp. 1(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 52	**Exhaust fan #10**
5.121.1	The Permittee shall limit emissions of PM < 10 micron <= 0.04234 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.121.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.04234 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.121.3	The Permittee shall limit emissions of Lead <= 0.006304 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.121.4	The Permittee shall limit emissions of Nitrogen Oxides <= 0.2453 pounds per hour 1-hour average This is the emission rate used in modeling and it represents the contributions from EQUI 110 and EQUI 112. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.121.5	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 52 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 52 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.121.6	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 52 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 52 for the previous 92-day period using formulas specified in this permit; and

Commented [A396]: Delete this requirement. See above: Unnecessary requirement. To the extent these are retained, all of the Exhaust Fan emission formulas should be compared to the final Form GI-07.

Commented [A397]: Delete this requirement. Recordkeeping should be done at the EQUI level, not the STRU level.

Requirement number	Requirement and citation
	3) The 365-day rolling sum annual die casting lead emissions from STRU 52 diecast emissions for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.121.7	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 52 using the following equation: STRU52PM10 = EQUI147FPM10 + EQUI158FPM10 + 0.01864 where: STRU52PM10 = total daily average PM10 emissions emitted through STRU 52, in pounds/hour; EQUI147FPM10 = total daily average uncaptured PM10 emissions from EQUI 147, in pounds/hour; EQUI158FPM10 = total daily average uncaptured PM10 emissions from EQUI 158, in pounds/hour; and 0.01864 = total daily average PM10 emission contribution from EQUI 110 and EQUI 112, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.121.8	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 52 using the following equation: STRU52PM2.5 = EQUI147FPM2.5 + EQUI158FPM2.5 + 0.01864 where: STRU52PM2.5 = total daily average PM2.5 emissions emitted through STRU 52, in pounds/hour; EQUI147FPM2.5 = total daily average uncaptured PM2.5 emissions from EQUI 147, in pounds/hour; and EQUI158FPM2.5 = total daily average uncaptured PM2.5 emissions from EQUI 158, in pounds/hour; and 0.01864 = total daily average PM2.5 emission contribution from EQUI 110 and EQUI 112, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.121.9	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 52 using the following equations: STRU52L = EQUI147FL + EQUI158FL STRU52L3A = [(STRU52L2 + STRU52L3 + STRU52L4 +...+ STRU52L91 + STRU52L92 + STRU52L93) - STRU52L1] / 92 days where: STRU52L# = total daily lead emissions emitted through STRU 52, in pounds/day; STRU52L3A = 92-day rolling average lead emissions emitted through STRU 52 for the previous 92-day period, in pounds/day; EQUI147FL = total uncaptured lead emissions from EQUI 147, in pounds/day; and EQUI158FL = total uncaptured lead emissions from EQUI 158, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.121.10	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 52 using the following equations: STRU52L = EQUI147FL + EQUI158FL STRU52L365S = (STRU52L2 + STRU52L3 + STRU52L4 +...+ STRU52L364 + STRU52L365 + STRU52L366) - STRU52L1

Commented [A398]: Delete this requirement. See above: Unnecessary requirement. To the extent these are retained, all of the Exhaust Fan emission formulas should be compared to the final Form GI-07.

STRU 72	**Fume Hood Vent**
5.130.1	The Permittee shall limit emissions of PM < 10 micron <= 0.006336 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.130.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.006336 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.130.3	Particulate Matter: Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 72 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 72 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.130.4	PM < 10 micron: PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 72 using the following equation: STRU72PM10 = EQUI240PM10 where: STRU72PM10 = total daily average PM10 emissions emitted through STRU 72 from EQUI 240, in pounds/hour; and EQUI240PM10 = total daily average PM10 emissions from EQUI 240, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.130.5	PM < 2.5 micron: PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 72 using the following equation: STRU72PM2.5 = EQUI240PM2.5 where: STRU72PM2.5 = total daily average PM2.5 emissions emitted through STRU 72 from EQUI 240, in pounds/hour; and EQUI240PM2.5 = total daily average PM2.5 emissions from EQUI 240, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.130.6	The Permittee is prohibited from releasing emissions of pollutants through STRU 72 from any emission units other than EQUI 240 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp. (A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 73	**Battery Terminal Post Coater Stack**
5.131.1	The Permittee shall limit emissions of PM < 10 micron <= 0.01012 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]

Requirement number	Requirement and citation
5.131.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.01012 pounds per hour daily average. [Minn. R. 7007.0080, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.131.3	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 73 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 73 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.131.4	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 73 using the following equation: STRU73PM10 = PM10UV + PM10VOC + PM10WB where: STRU73PM10 = total daily average PM10 emissions emitted through STRU 73 from all EQUIs in COMG 2, COMG 4, and COMG 8, in pounds/hour; PM10UV = total daily average PM10 emissions from all EQUIs in COMG 2, in pounds/hour; PM10VOC = total daily average PM10 emissions from all EQUIs in COMG 4, in pounds/hour; PM10WB = total daily average PM10 emissions from all EQUIs in COMG 8, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.131.5	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 73 using the following equations: STRU73PM2.5 = PM2.5UV + PM2.5VOC + PM2.5WB where: STRU73PM2.5 = total daily average PM2.5 emissions emitted through STRU 73 from all EQUIs in COMG 2, COMG 4, and COMG 8, in pounds/hour; PM2.5UV = total daily average PM2.5 emissions from COMG 2, in pounds/hour; PM2.5VOC = total daily average PM2.5 emissions from COMG 4, in pounds/hour; PM2.5WB = total daily average PM2.5 emissions from COMG 8, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
STRU 74	**Smog Hog #5 Stack**
5.132.1	The Permittee shall limit emissions of PM < 10 micron <= 0.02084 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.132.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.02084 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.132.3	The Permittee shall limit emissions of Lead <= 0.01233 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.132.4	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 74 for the previous operating day using the formulas specified in this permit; and

Requirement number	Requirement and citation
	2) The total daily average hourly PM2.5 emissions from STRU 74 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.132.5	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 74 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 74 for the previous 92-day period using formulas specified in this permit; and 3) The 365-day rolling sum annual lead emissions from STRU 74 for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.132.6	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 74 using the following equation: STRU74PM10 = EQUI130PM10 + EQUI131PM10 where: STRU74PM10 = total daily average PM10 emissions emitted through STRU 74, in pounds/hour; EQUI130PM10 = total daily average PM10 stack emissions from EQUI 130, in pounds/hour; and EQUI131PM10 = total daily average PM10 stack emissions from EQUI 131, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.132.7	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 74 using the following equation: STRU74PM2.5 = EQUI130PM2.5 + EQUI131PM2.5 where: STRU74PM2.5 = total daily average PM2.5 emissions emitted through STRU 74, in pounds/hour; EQUI130PM2.5 = total daily average PM2.5 stack emissions from EQUI 130, in pounds/hour; and EQUI131PM2.5 = total daily average PM2.5 stack emissions from EQUI 131, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.132.8	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 74 the following equations: STRU74L = EQUI130L + EQUI130L STRU74L3A = [(STRU74L2 + STRU74L3 + STRU74L4 +.... + STRU74L91 + STRU74L92 + STRU74L93) - STRU74L1] / 92 days where: STRU74L# = total daily lead emissions emitted through STRU 74, in pounds/day; STRU74L3A = 92-day rolling average lead emissions emitted through STRU 74 for the previous 92-day period, in pounds/day; EQUI130L = total lead stack emissions from EQUI 130, in pounds/day; and EQUI131L = total lead stack emissions from EQUI 131, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.132.9	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 74 using the following equations:

Requirement number	Requirement and citation
	STRU74L = EQUI130L + EQUI131L STRU74L365S = (STRU74L2 + STRU74L3 + STRU74L4 +.... + STRU74L364 + STRU74L365 + STRU74L366) - STRU74L1 where: STRU74L# = total daily lead emissions emitted through STRU 74, in pounds/day; STRU74L365S = 365-day rolling sum lead emissions emitted through STRU 74 for the previous 365-day period, in pounds/year; EQUI130L = total lead stack emissions from EQUI 130, in pounds/day; and EQUI131L = total lead stack emissions from EQUI 131, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.132.10	The Permittee is prohibited from releasing emissions of pollutants through STRU 74 from any emission units other than EQUI 130 or EQUI 131 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp. 1(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
STRU 75	**Smog Hog #8 Stack**
5.133.1	The Permittee shall limit emissions of PM < 10 micron <= 0.03348 pounds per hour daily average. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.133.2	The Permittee shall limit emissions of PM < 2.5 micron <= 0.03348 pounds per hour daily average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.133.3	The Permittee shall limit emissions of Lead <= 0.01980 pounds per day 92-day rolling average. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.133.4	Particulate Matter: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following: 1) The total daily average hourly PM10 emissions from STRU 75 for the previous operating day using the formulas specified in this permit; and 2) The total daily average hourly PM2.5 emissions from STRU 75 for the previous operating day using the formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.133.5	Lead: Daily Recordkeeping. By 4:30pm on each day of operation, the Permittee shall calculate and record the following using the formulas specified in this permit: 1) The total lead emissions from STRU 75 the previous operating day using formulas specified in this permit; 2) The 92-day rolling average daily lead emissions from STRU 75 for the previous 92-day period using formulas specified in this permit; and 3) The 365-day rolling sum annual lead emissions from STRU 75 for the previous 365-day period using formulas specified in this permit. [Minn. R. 7007.0800, subps. 4-5]
5.133.6	PM < 10 micron: Daily Calculations. The Permittee shall calculate the average daily PM10 emissions from STRU 75 using the following equation: STRU75PM10 = EQUI134PM10 + EQUI135PM10 where: STRU75PM10 = total daily average PM10 emissions emitted through STRU 75, in pounds/hour; EQUI134PM10 = total daily average PM10 stack emissions from EQUI 134, in pounds/hour; and

Requirement number	Requirement and citation
	EQUI135PM10 = total daily average PM10 stack emissions from EQUI 135, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.133.7	PM < 2.5 micron: Daily Calculations. The Permittee shall calculate the average daily PM2.5 emissions from STRU 75 using the following equation: STRU75PM2.5 = EQUI134PM2.5 + EQUI135PM2.5 where: STRU75PM2.5 = total daily average PM2.5 stack emissions emitted through STRU 75, in pounds/hour; and EQUI134PM2.5 = total daily average PM2.5 stack emissions from EQUI 134, in pounds/hour; and EQUI135PM2.5 = total daily average PM2.5 stack emissions from EQUI 135, in pounds/hour. [Minn. R. 7007.0800, subps. 4-5]
5.133.8	Lead: Daily Calculations (92-Day Rolling Average). The Permittee shall calculate the 92-day rolling average daily lead emissions from STRU 75 using the following equations: STRU75L = EQUI134L + EQUI135L STRU75L3A = [(STRU75L2 + STRU75L3 + STRU75L4 +...+ STRU75L91 + STRU75L92 + STRU75L93) - STRU75L1] / 92 days where: STRU75L# = total daily lead emissions emitted through STRU 75, in pounds/day; STRU75L3A = 92-day rolling average lead emissions emitted through STRU 75 for the previous 92-day period, in pounds/day; EQUI134L = total lead stack emissions from EQUI 134, in pounds/day; and EQUI135L = total lead stack emissions from EQUI 135, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.133.9	Lead: Daily Calculations (365-Day Rolling Sum). The Permittee shall calculate the 365-day rolling sum annual lead emissions from STRU 75 using the following equations: STRU75L = EQUI134L + EQUI135L STRU75L365S = (STRU75L2 + STRU75L3 + STRU75L4 + . . . + STRU75L364 + STRU75L365 + STRU75L366) - STRU21L1 where: STRU75L# = total daily lead emissions emitted through STRU 75, in pounds/day; STRU75L365S = 365-day rolling sum lead emissions emitted through STRU 75 for the previous 365-day period, in pounds/year; EQUI134L = total lead stack emissions from EQUI 134, in pounds/day; and EQUI135L = total lead stack emissions from EQUI 135, in pounds/day. [Minn. R. 7007.0800, subps. 4-5]
5.133.10	The Permittee is prohibited from releasing emissions of pollutants through STRU 75 from any emission units other than EQUI 134 or EQUI 135 without obtaining a major amendment to this permit to revise emission limits and compliance demonstration methods based on revised dispersion modeling as described elsewhere in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7007.1500, subp. 1(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
TREA 1	**Smog Hog #15**

Requirement number	Requirement and citation
5.134.1	The Permittee shall vent controlled emissions from EQUIs 101, 102, 103, 104, and 221 as exhausted from TREA 60 to TREA 1 whenever EQUIs 101, 102, 103, 104, or 221 operate, and operate and maintain TREA 1 at all times that any emissions are vented to TREA 1. The Permittee shall document periods of non-operation of TREA 1 whenever EQUIs 101, 102, 103, 104, or 221 are operating. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.134.2	The Permittee shall comply with the requirements of COMG 11 whenever emissions are vented to TREA 1. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.134.3	The Permittee shall operate and maintain the electrostatic precipitator (ESP) in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.134.4	~~Data Collection: The Permittee shall maintain a continuous hard copy readout or computer disk file that shows the On/Off condition of the ESP at all times. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]~~
5.134.5	Daily Monitoring: The Permittee shall physically verify the operation of the Continuous Parameter Monitoring System (CPMS) at least once each operating day to verify that it is working and recording properly. The Permittee shall maintain a written record of the daily verifications. [Minn. R. 7007.0800, subps. 4-5]
5.134.6	~~Monitoring Equipment: The Permittee must install and maintain a continuous parameter monitoring system (CPMS) for monitoring the ESP On/Off condition as required by this permit. The monitoring equipment must be installed, in use, and properly maintained, including maintaining the necessary parts for routine repairs of the monitoring equipment, whenever operation of the monitored control equipment is required. [Minn. R. 7007.0800, subps. 4-5]~~
5.134.7	Quarterly Inspections: At least once per calendar quarter, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components that are subject to wear or plugging, for example: bearings, belts, hoses, fans, nozzles, orifices, and ducts. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.134.8	Annual Inspections: At least once per calendar year, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components not covered by the quarterly inspections. This includes, but is not limited to, components that are not subject to wear or plugging including structural components, housings, and hoods. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.134.9	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - any recorded operating parameter is outside the required operating range (e.g., total power input); or - the ESP or any of its components are found during the inspections to need repair. Corrective actions shall return operation to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the) O & M Plan for the ESP. The Permittee shall keep a record of the type and date of any corrective action taken for the ESP. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.134.10	Pre-Filter and Cell Maintenance: The Permittee shall transport pre-filters and cells in leak-proof containers during cleaning, replacement, or performing other maintenance. The Permittee shall dispose of all lead-soiled materials including, but not limited to, dishwasher waste water, mop heads,

Commented [A414]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Commented [A415]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

	rags, personal protective equipment (PPE), vacuum bags, and any other material soiled or otherwise in contact with lead as hazardous waste. [Minn. R. 7007.0800, subp. 2, Minn. R. ch. 7045]
TREA 25	**Smog Hog #1**
5.135.1	The Permittee shall vent controlled emissions from EQUIs 121, 122, and 123 as exhausted from TREA 61 to TREA 25 whenever EQUIs 121, 122, or 123 operate, and operate and maintain TREA 25 at all times that any emissions are vented to TREA 25. The Permittee shall document periods of non-operation of TREA 25 whenever EQUIs 121, 122, or 123 are operating. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.135.2	The Permittee shall comply with the requirements of COMG 12 whenever emissions are vented to TREA 25. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.135.3	The Permittee shall operate and maintain the electrostatic precipitator (ESP) in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.135.4	Daily Monitoring: The Permittee shall physically verify the operation of the Continuous Parameter Monitoring System (CPMS) at least once each operating day to verify that it is working and recording properly. The Permittee shall maintain a written record of the daily verifications. [Minn. R. 7007.0800, subps. 4-5]
5.135.5	~~Data Collection: The Permittee shall maintain a continuous hard copy readout or computer disk file that shows the On/Off condition of the ESP at all times. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]~~
5.135.6	Quarterly Inspections: At least once per calendar quarter, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components that are subject to wear or plugging, for example: bearings, belts, hoses, fans, nozzles, orifices, and ducts. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.135.7	~~Monitoring Equipment: The Permittee must install and maintain a continuous parameter monitoring system (CPMS) for monitoring the ESP On/Off condition as required by this permit. The monitoring equipment must be installed, in use, and properly maintained, including maintaining the necessary parts for routine repairs of the monitoring equipment, whenever operation of the monitored control equipment is required. [Minn. R. 7007.0800, subps. 4-5]~~
5.135.8	Annual Inspections: At least once per calendar year, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components not covered by the quarterly inspections. This includes, but is not limited to, components that are not subject to wear or plugging including structural components, housings, and hoods. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.135.9	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - any recorded operating parameter is outside the required operating range (e.g., total power input); or - the ESP or any of its components are found during the inspections to need repair. Corrective actions shall return operation to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the) O & M Plan for the ESP. The Permittee shall keep a record of the type and date of any corrective action taken for the ESP. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]

Commented [A416]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Commented [A417]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

	necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the) O & M Plan for the ESP. The Permittee shall keep a record of the type and date of any corrective action taken for the ESP. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.136.10	Pre-Filter and Cell Maintenance: The Permittee shall transport pre-filters and cells in leak-proof containers during cleaning, replacement, or performing other maintenance. The Permittee shall dispose of all lead-soiled materials including, but not limited to, dishwasher waste water, mop heads, rags, personal protective equipment (PPE), vacuum bags, and any other material soiled or otherwise in contact with lead as hazardous waste. [Minn. R. 7007.0800, subp. 2, Minn. R. ch. 7045]
TREA 27	**Smog Hog #3**
5.137.1	The Permittee shall vent controlled emissions from EQUIs 127, 128, and 129 as exhausted from TREA 64 to TREA 27 whenever EQUIs 127, 128, or 129 operate, and operate and maintain TREA 27 at all times that any emissions are vented to TREA 27. The Permittee shall document periods of non-operation of TREA 27 whenever EQUIs 127, 128, or 129 are operating. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.137.2	The Permittee shall comply with the requirements of COMG 12 whenever emissions are vented to TREA 27. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.137.3	The Permittee shall operate and maintain the electrostatic precipitator (ESP) in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.137.4	Daily Monitoring: The Permittee shall physically verify the operation of the Continuous Parameter Monitoring System (CPMS) at least once each operating day to verify that it is working and recording properly. The Permittee shall maintain a written record of the daily verifications. [Minn. R. 7007.0800, subps. 4-5]
5.137.5	~~Data Collection: The Permittee shall maintain a continuous hard copy readout or computer disk file that shows the On/Off condition of the ESP at all times. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]~~
5.137.6	Quarterly Inspections: At least once per calendar quarter, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components that are subject to wear or plugging, for example: bearings, belts, hoses, fans, nozzles, orifices, and ducts. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.137.7	~~Monitoring Equipment: The Permittee must install and maintain a continuous parameter monitoring system (CPMS) for monitoring the ESP On/Off condition as required by this permit. The monitoring equipment must be installed, in use, and properly maintained, including maintaining the necessary parts for routine repairs of the monitoring equipment, whenever operation of the monitored control equipment is required. [Minn. R. 7007.0800, subps. 4-5]~~
5.137.8	Annual Inspections: At least once per calendar year, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components not covered by the quarterly inspections. This includes, but is not limited to, components that are not subject to wear or plugging including structural components, housings, and hoods. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.137.9	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur:

Commented [A420]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Commented [A421]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Requirement number	Requirement and citation
	- any recorded operating parameter is outside the required operating range (e.g., total power input); or - the ESP or any of its components are found during the inspections to need repair. Corrective actions shall return operation to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the) O & M Plan for the ESP. The Permittee shall keep a record of the type and date of any corrective action taken for the ESP. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.137.10	Pre-Filter and Cell Maintenance: The Permittee shall transport pre-filters and cells in leak-proof containers during cleaning, replacement, or performing other maintenance. The Permittee shall dispose of all lead-soiled materials including, but not limited to, dishwasher waste water, mop heads, rags, personal protective equipment (PPE), vacuum bags, and any other material soiled or otherwise in contact with lead as hazardous waste. [Minn. R. 7007.0800, subp. 2, Minn. R. ch. 7045]
TREA 30	**Smog Hog #6**
5.138.1	The Permittee shall vent controlled emissions from EQUIs 132 and 133 as exhausted from TREA 66 to TREA 30 whenever EQUIs 132 or 133 operate, and operate and maintain TREA 30 at all times that any emissions are vented to TREA 30. The Permittee shall document periods of non-operation of TREA 30 whenever EQUIs 132 or 133 are operating. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.138.2	The Permittee shall comply with the requirements of COMG 12 whenever emissions are vented to TREA 30. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.138.3	The Permittee shall operate and maintain the electrostatic precipitator (ESP) in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.138.4	Daily Monitoring: The Permittee shall physically verify the operation of the Continuous Parameter Monitoring System (CPMS) at least once each operating day to verify that it is working and recording properly. The Permittee shall maintain a written record of the daily verifications. [Minn. R. 7007.0800, subps. 4-5]
5.138.5	~~Data Collection: The Permittee shall maintain a continuous hard copy readout or computer disk file that shows the On/Off condition of the ESP at all times. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]~~
5.138.6	Quarterly Inspections: At least once per calendar quarter, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components that are subject to wear or plugging, for example: bearings, belts, hoses, fans, nozzles, orifices, and ducts. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.138.7	~~Monitoring Equipment: The Permittee must install and maintain a continuous parameter monitoring system (CPMS) for monitoring the ESP On/Off condition as required by this permit. The monitoring equipment must be installed, in use, and properly maintained, including maintaining the necessary parts for routine repairs of the monitoring equipment, whenever operation of the monitored control equipment is required. [Minn. R. 7007.0800, subps. 4-5]~~
5.138.8	Annual Inspections: At least once per calendar year, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components not covered by the quarterly inspections. This includes, but is not limited to, components that are not subject to wear or plugging including structural components, housings, and hoods. The Permittee shall maintain a

Commented [A422]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.143.7	~~Monitoring Equipment: The Permittee must install and maintain a continuous parameter monitoring system (CPMS) for monitoring the ESP On/Off condition as required by this permit. The monitoring equipment must be installed, in use, and properly maintained, including maintaining the necessary parts for routine repairs of the monitoring equipment, whenever operation of the monitored control equipment is required. [Minn. R. 7007.0800, subps. 4-5]~~
5.143.8	Annual Inspections: At least once per calendar year, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components not covered by the quarterly inspections. This includes, but is not limited to, components that are not subject to wear or plugging including structural components, housings, and hoods. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.143.9	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - any recorded operating parameter is outside the required operating range (e.g., total power input); or - the ESP or any of its components are found during the inspections to need repair. Corrective actions shall return operation to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the) O & M Plan for the ESP. The Permittee shall keep a record of the type and date of any corrective action taken for the ESP. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.143.10	Pre-Filter and Cell Maintenance: The Permittee shall transport pre-filters and cells in leak-proof containers during cleaning, replacement, or performing other maintenance. The Permittee shall dispose of all lead-soiled materials including, but not limited to, dishwasher waste water, mop heads, rags, personal protective equipment (PPE), vacuum bags, and any other material soiled or otherwise in contact with lead as hazardous waste. [Minn. R. 7007.0800, subp. 2, Minn. R. ch. 7045]
TREA 40	**Smog Hog #17**
5.144.1	The Permittee shall vent controlled emissions from EQUI 147 as exhausted from TREA 74 to TREA 40 whenever EQUI 147 operates, and operate and maintain TREA 40 at all times that any emissions are vented to TREA 40. The Permittee shall document periods of non-operation of TREA 40 whenever EQUI 147 is operating. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.144.2	The Permittee shall comply with the requirements of COMG 12 whenever emissions are vented to TREA 40. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]

Commented [A432]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Commented [A433]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Requirement number	Requirement and citation
5.144.3	The Permittee shall operate and maintain the electrostatic precipitator (ESP) in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.144.4	Daily Monitoring: The Permittee shall physically verify the operation of the Continuous Parameter Monitoring System (CPMS) at least once each operating day to verify that it is working and recording properly. The Permittee shall maintain a written record of the daily verifications. [Minn. R. 7007.0800, subps. 4-5]
5.144.5	~~Data Collection: The Permittee shall maintain a continuous hard copy readout or computer disk file that shows the On/Off condition of the ESP at all times. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]~~
5.144.6	Quarterly Inspections: At least once per calendar quarter, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components that are subject to wear or plugging, for example: bearings, belts, hoses, fans, nozzles, orifices, and ducts. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.144.7	~~Monitoring Equipment: The Permittee must install and maintain a continuous parameter monitoring system (CPMS) for monitoring the ESP On/Off condition as required by this permit. The monitoring equipment must be installed, in use, and properly maintained, including maintaining the necessary parts for routine repairs of the monitoring equipment, whenever operation of the monitored control equipment is required. [Minn. R. 7007.0800, subps. 4 5]~~
5.144.8	Annual Inspections: At least once per calendar year, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components not covered by the quarterly inspections. This includes, but is not limited to, components that are not subject to wear or plugging including structural components, housings, and hoods. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. 5.148.6	If the Permittee replaces TREA 52, the replacement control must meet or exceed the control efficiency requirements of TREA 52 as well as comply with all other requirements of TREA 52. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.148.7	The Permittee shall operate and maintain the HEPA filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.148.8	Daily Inspections: Once each operating day, the Permittee shall visually inspect the condition of each HEPA filter with respect to alignment, saturation, tears, holes and any other condition that may affect the filter's performance. The Permittee shall maintain a daily written record of filter inspections. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.148.9	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee shall inspect the control equipment components. The Permittee shall maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.148.10	Corrective Actions: If the filters or any of their components are found during the inspections to need repair, the Permittee shall take corrective action as soon as possible. Corrective actions shall include

Commented [A442]: These are cartridge filter(s) not susceptible to damage. The unit is infrequently used. Delete this requirement.

Commented [A443]: Same comment as above.

Requirement number	Requirement and citation
	completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
TREA 53	**HEPA Filter - Tool Room 2 Abrasive Blasting**
5.149.1	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Particulate Matter >= 99.98 percent control efficiency. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.149.2	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 10 micron >= 99.98 percent control efficiency. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.149.3	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for PM < 2.5 micron >= 99.98 percent control efficiency. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.149.4	The Permittee shall operate and maintain control equipment such that it achieves a control efficiency for Lead >= 99.90 percent control efficiency. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.149.5	The Permittee shall vent emissions from EQUI 114 to TREA 53 whenever EQUI 114 operates, and operate and maintain TREA 53 at all times that any emissions are vented to TREA 53. The Permittee shall document periods of non-operation of the control equipment TREA 53 whenever EQUI 114 is operating. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.149.6	If the Permittee replaces TREA 53, the replacement control must meet or exceed the control efficiency requirements of TREA 53 as well as comply with all other requirements of TREA 53. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.149.7	The Permittee shall operate and maintain the HEPA filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.149.8	Daily Inspections: Once each operating day, the Permittee shall visually inspect the condition of each HEPA filter with respect to alignment, saturation, tears, holes and any other condition that may affect the filter's performance. The Permittee shall maintain a daily written record of filter inspections. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.149.9	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee shall inspect the control equipment components. The Permittee shall maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.149.10	Corrective Actions: If the filters or any of their components are found during the inspections to need repair, the Permittee shall take corrective action as soon as possible. Corrective actions shall include

Commented [A444]: These are cartridge filter(s) not susceptible to damage. The unit is infrequently used. Delete this requirement.

Commented [A445]: Same comment as above.

TREA 56	**HEPA Filter - EQUI 88**
5.152.1	The Permittee shall operate and maintain control equipment such that it meets the requirements of COMG 14. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.152.2	The Permittee shall vent emissions from EQUI 88 to TREA 56 whenever EQUI 88 operates, and operate and maintain TREA 56 at all times that any emissions are vented to TREA 56. The Permittee shall document periods of non-operation of the control equipment TREA 56 whenever EQUI 88 is operating. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.152.3	If the Permittee replaces TREA 56, the replacement control must meet or exceed the control efficiency requirements of COMG 14 as well as comply with all other requirements of COMG 14. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
TREA 57	**HEPA Filter - EQUI 95**
5.153.1	The Permittee shall operate and maintain control equipment such that it meets the requirements of COMG 14. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.153.2	The Permittee shall vent emissions from EQUI 95 to TREA 57 whenever EQUI 95 operates, and operate and maintain TREA 57 at all times that any emissions are vented to TREA 57. The Permittee

Requirement number	Requirement and citation
	shall document periods of non-operation of the control equipment TREA 57 whenever EQUI 95 is operating. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.153.3	If the Permittee replaces TREA 57, the replacement control must meet or exceed the control efficiency requirements of COMG 14 as well as comply with all other requirements of COMG 14. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
TREA 58	**HEPA Filter - EQUI 219**
5.154.1	The Permittee shall operate and maintain control equipment such that it meets the requirements of COMG 14. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.154.2	The Permittee shall vent emissions from EQUI 219 to TREA 58 whenever EQUI 219 operates, and operate and maintain TREA 58 at all times that any emissions are vented to TREA 58. The Permittee shall document periods of non-operation of the control equipment TREA 58 whenever EQUI 219 is operating. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.154.3	If the Permittee replaces TREA 58, the replacement control must meet or exceed the control efficiency requirements of COMG 14 as well as comply with all other requirements of COMG 14. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
TREA 59	**HEPA Filter - EQUI 220**
5.155.1	The Permittee shall operate and maintain control equipment such that it meets the requirements of COMG 14. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.155.2	The Permittee shall vent emissions from EQUI 220 to TREA 59 whenever EQUI 220 operates, and operate and maintain TREA 59 at all times that any emissions are vented to TREA 59. The Permittee shall document periods of non-operation of the control equipment TREA 59 whenever EQUI 220 is operating. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.155.3	If the Permittee replaces TREA 59, the replacement control must meet or exceed the control efficiency requirements of COMG 14 as well as comply with all other requirements of COMG 14. Prior to making such a change, the Permittee shall apply for and obtain the appropriate permit amendment, as applicable. If no amendment is needed for the replacement, the Permittee shall submit an electronic notice to the Agency using Form CR-05. The notice must be received by the Agency seven working days prior to the commencement/start of replacement. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R.

	7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
TREA 60	**Nederman Filter 15N - STRU 1**
5.156.1	The Permittee shall limit Stage 1 Filter Pressure Drop >= 0.0001 and <= 0.600 kilopascals, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. The Permittee shall record the pressure drop at least once every 24 hours during operations. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.156.2	The Permittee shall limit Stage 2 Filter Pressure Drop >= 0.0001 and <= 0.800 kilopascals, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. The Permittee shall record the pressure drop at least once every 24 hours during operations. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.156.3	The Permittee shall vent emissions from EQUIs 101, 102, 103, 104, and 221 to TREA 60 whenever EQUIs 101, 102, 103, 104, or 221 are operating, and operate and maintain TREA 60 at all times that any emissions are vented to TREA 60. The Permittee shall document periods of non-operation of the control equipment TREA 60 whenever EQUI 101, 102, 103, 104, or 221 are operating. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.156.4	Pressure Drop: Daily Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.156.5	The Permittee shall comply with the requirements of COMG 11 whenever emissions are vented to TREA 60. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.156.6	Daily Inspections: Once each operating day, the Permittee shall verify if the pressure drop reading is such that filter maintenance is required as per manufacturer's specifications. If maintenance is required, the permittee shall proceed to clean the unit as per manufacturer's specifications before the unit is placed on operation the next day. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.156.7	The Permittee shall operate and maintain the Stage 1, Stage 2, and HEPA filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.156.8	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee shall inspect the control equipment components. The Permittee shall maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.156.9	Corrective Actions: If the filters or any of their components are found during the inspections to need repair, the Permittee shall take corrective action as soon as possible. Corrective actions shall include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the filter. The Permittee shall

Requirement number	Requirement and citation
	keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
TREA 61	**Nederman Filter 1N - STRU 15**
5.157.1	The Permittee shall limit Stage 1 Filter Pressure Drop >= 0.0001 and <= 0.600 kilopascals, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. The Permittee shall record the pressure drop at least once every 24 hours during operations. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.157.2	The Permittee shall limit Stage 2 Filter Pressure Drop >= 0.0001 and <= 0.800 kilopascals, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. The Permittee shall record the pressure drop at least once every 24 hours during operations. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.157.3	The Permittee shall vent emissions from EQUIs 121, 122, and 123 to TREA 61 whenever EQUIs 121, 122, or 123 are operating, and operate and maintain TREA 61 at all times that any emissions are vented to TREA 61. The Permittee shall document periods of non-operation of the control equipment TREA 61 whenever EQUIs 121, 122, or 123 are operating. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.157.4	Pressure Drop: Daily Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.157.5	The Permittee shall comply with the requirements of COMG 12 whenever emissions are vented to TREA 61. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.157.6	Daily Inspections: Once each operating day, the Permittee shall verify if the pressure drop reading is such that filter maintenance is required as per manufacturer's specifications. If maintenance is required, the permittee shall proceed to clean the unit as per manufacturer's specifications before the unit is placed on operation the next day. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.157.7	The Permittee shall operate and maintain the Stage 1, Stage 2, and HEPA filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.157.8	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee shall inspect the control equipment components. The Permittee shall maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.157.9	Corrective Actions: If the filters or any of their components are found during the inspections to need repair, the Permittee shall take corrective action as soon as possible. Corrective actions shall include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the filter. The Permittee shall

5.167.1	The Permittee shall limit Stage 1 Filter Pressure Drop >= 0.0001 and <= 0.600 kilopascals, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. The Permittee shall record the pressure drop at least once every 24 hours during operations. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.167.2	The Permittee shall limit Stage 2 Filter Pressure Drop >= 0.0001 and <= 0.800 kilopascals, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. The Permittee shall record the pressure drop at least once every 24 hours during operations. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.167.3	The Permittee shall vent emissions from EQUIs 141 and 143 to TREA 71 whenever EQUIs 141 or 143 are operating, and operate and maintain TREA 71 at all times that any emissions are vented to TREA 71. The Permittee shall document periods of non-operation of the control equipment TREA 71 whenever EQUIs 141 or 143 are operating. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.167.4	The Permittee comply with the requirements of COMG 12 whenever emissions are vented to TREA 71. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.167.5	Pressure Drop: Daily Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.167.6	Daily Inspections: Once each operating day, the Permittee shall verify if the pressure drop reading is such that filter maintenance is required as per manufacturer's specifications. If maintenance is required, the permittee shall proceed to clean the unit as per manufacturer's specifications before the unit is placed on operation the next day. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.167.7	The Permittee shall operate and maintain the Stage 1, Stage 2, and HEPA filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.167.8	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee shall inspect the control equipment components. The Permittee shall maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.167.9	Corrective Actions: If the filters or any of their components are found during the inspections to need repair, the Permittee shall take corrective action as soon as possible. Corrective actions shall include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]

The Permittee shall record the pressure drop at least once every 24 hours during operations. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.172.2	The Permittee shall limit Stage 2 Filter Pressure Drop >= 0.0001 and <= 0.800 kilopascals, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. The Permittee shall record the pressure drop at least once every 24 hours during operations. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.172.3	The Permittee shall vent emissions from EQUIs 152 and 156 to TREA 76 whenever EQUIs 152 or 156 are operating, and operate and maintain TREA 76 at all times that any emissions are vented to TREA 76. The Permittee shall document periods of non-operation of the control equipment TREA 76 whenever EQUIs 152 or 156 are operating. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.172.4	The Permittee comply with the requirements of COMG 12 whenever emissions are vented to TREA 76. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.172.5	Pressure Drop: Daily Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.172.6	Daily Inspections: Once each operating day, the Permittee shall verify if the pressure drop reading is such that filter maintenance is required as per manufacturer's specifications. If maintenance is required, the permittee shall proceed to clean the unit as per manufacturer's specifications before the unit is placed on operation the next day. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.172.7	The Permittee shall operate and maintain the Stage 1, Stage 2, and HEPA filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.172.8	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee shall inspect the control equipment components. The Permittee shall maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.172.9	Corrective Actions: If the filters or any of their components are found during the inspections to need repair, the Permittee shall take corrective action as soon as possible. Corrective actions shall include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
TREA 77	**Nederman Filter 20N - STRU 34**

Requirement number	Requirement and citation
5.173.1	The Permittee shall limit Stage 1 Filter Pressure Drop >= 0.0001 and <= 0.600 kilopascals, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. The Permittee shall record the pressure drop at least once every 24 hours during operations. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.173.2	The Permittee shall limit Stage 2 Filter Pressure Drop >= 0.0001 and <= 0.800 kilopascals, unless a new range is set pursuant to Minn. R. 7017.2025, subp. 3 based on the values recorded during the most recent MPCA-approved performance test where compliance was demonstrated. The new range shall be implemented upon receipt of the Notice of Compliance letter granting preliminary approval. The range is final upon issuance of a permit amendment incorporating the change. The Permittee shall record the pressure drop at least once every 24 hours during operations. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.173.3	The Permittee shall vent emissions from EQUIs 153 and 154 to TREA 77 whenever EQUIs 153 or 154 are operating, and operate and maintain TREA 77 at all times that any emissions are vented to TREA 77. The Permittee shall document periods of non-operation of the control equipment TREA 77 whenever EQUIs 153 or 154 are operating. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.173.4	The Permittee comply with the requirements of COMG 12 whenever emissions are vented to TREA 77. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.173.5	Pressure Drop: Daily Recordkeeping. The Permittee shall record the time and date of each pressure drop reading and whether or not the recorded pressure drop was within the range specified in this permit. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.173.6	Daily Inspections: Once each operating day, the Permittee shall verify if the pressure drop reading is such that filter maintenance is required as per manufacturer's specifications. If maintenance is required, the permittee shall proceed to clean the unit as per manufacturer's specifications before the unit is placed on operation the next day. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
5.173.7	The Permittee shall operate and maintain the Stage 1, Stage 2, and HEPA filter in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.173.8	Periodic Inspections: At least once per calendar quarter, or more frequently as required by the manufacturer's specifications, the Permittee shall inspect the control equipment components. The Permittee shall maintain a written record of these inspections. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.173.9	Corrective Actions: If the filters or any of their components are found during the inspections to need repair, the Permittee shall take corrective action as soon as possible. Corrective actions shall include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the O & M Plan for the filter. The Permittee shall keep a record of the type and date of any corrective action taken for each filter. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
TREA 78	**Smog Hog #5**

Requirement number	Requirement and citation
5.174.1	The Permittee shall vent controlled emissions from EQUIs 130 and 131 as exhausted from TREA 65 to TREA 78 whenever EQUIs 130 or 131 operate, and operate and maintain TREA 78 at all times that any emissions are vented to TREA 78. The Permittee shall document periods of non-operation of TREA 78 whenever EQUIs 130 or 131 are operating. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.174.2	The Permittee shall comply with the requirements of COMG 12 whenever emissions are vented to TREA 78. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.174.3	The Permittee shall operate and maintain the electrostatic precipitator (ESP) in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.174.4	Daily Monitoring: The Permittee shall physically verify the operation of the Continuous Parameter Monitoring System (CPMS) at least once each operating day to verify that it is working and recording properly. The Permittee shall maintain a written record of the daily verifications. [Minn. R. 7007.0800, subps. 4-5]
5.174.5	~~Data Collection: The Permittee shall maintain a continuous hard copy readout or computer disk file that shows the On/Off condition of the ESP at all times.~~ [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.174.6	Quarterly Inspections: At least once per calendar quarter, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components that are subject to wear or plugging, for example: bearings, belts, hoses, fans, nozzles, orifices, and ducts. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.174.7	~~Monitoring Equipment: The Permittee must install and maintain a continuous parameter monitoring system (CPMS) for monitoring the ESP On/Off condition as required by this permit. The monitoring equipment must be installed, in use, and properly maintained, including maintaining the necessary parts for routine repairs of the monitoring equipment, whenever operation of the monitored control equipment is required. [Minn. R. 7007.0800, subps. 4-5]~~
5.174.8	Annual Inspections: At least once per calendar year, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components not covered by the quarterly inspections. This includes, but is not limited to, components that are not subject to wear or plugging including structural components, housings, and hoods. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.174.9	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - any recorded operating parameter is outside the required operating range (e.g., total power input); or - the ESP or any of its components are found during the inspections to need repair. Corrective actions shall return operation to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the) O & M Plan for the ESP. The Permittee shall keep a record of the type and date of any corrective action taken for the ESP. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]
5.174.10	Pre-Filter and Cell Maintenance: The Permittee shall transport pre-filters and cells in leak-proof containers during cleaning, replacement, or performing other maintenance. The Permittee shall dispose of all lead-soiled materials including, but not limited to, dishwasher waste water, mop heads,

Commented [A448]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Commented [A449]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

	rags, personal protective equipment (PPE), vacuum bags, and any other material soiled or otherwise in contact with lead as hazardous waste. [Minn. R. 7007.0800, subp. 2, Minn. R. ch. 7045]
TREA 79	**Smog-Hog #8**
5.175.1	The Permittee shall vent controlled emissions from EQUIs 134 and 135 as exhausted from TREA 67 to TREA 79 whenever EQUIs 134 or 135 operate, and operate and maintain TREA 79 at all times that any emissions are vented to TREA 79. The Permittee shall document periods of non-operation of TREA 79 whenever EQUIs 134 or 135 are operating. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.175.2	The Permittee shall comply with the requirements of COMG 12 whenever emissions are vented to TREA 79. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
5.175.3	The Permittee shall operate and maintain the electrostatic precipitator (ESP) in accordance with the Operation and Maintenance (O & M) Plan. The Permittee shall keep copies of the O & M Plan available onsite for use by staff and MPCA staff. [Minn. R. 7007.0800, subp. 14]
5.175.4	Daily Monitoring: The Permittee shall physically verify the operation of the Continuous Parameter Monitoring System (CPMS) at least once each operating day to verify that it is working and recording properly. The Permittee shall maintain a written record of the daily verifications. [Minn. R. 7007.0800, subps. 4-5]
5.175.5	~~Data Collection: The Permittee shall maintain a continuous hard copy readout or computer disk file that shows the On/Off condition of the ESP at all times. [Minn. R. 7007.0800, subps. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]~~
5.175.6	Quarterly Inspections: At least once per calendar quarter, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components that are subject to wear or plugging, for example: bearings, belts, hoses, fans, nozzles, orifices, and ducts. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.175.7	~~Monitoring Equipment: The Permittee must install and maintain a continuous parameter monitoring system (CPMS) for monitoring the ESP On/Off condition as required by this permit. The monitoring equipment must be installed, in use, and properly maintained, including maintaining the necessary parts for routine repairs of the monitoring equipment, whenever operation of the monitored control equipment is required. [Minn. R. 7007.0800, subps. 4-5]~~
5.175.8	Annual Inspections: At least once per calendar year, or more frequently if required by the manufacturer, the Permittee shall inspect the control equipment components not covered by the quarterly inspections. This includes, but is not limited to, components that are not subject to wear or plugging including structural components, housings, and hoods. The Permittee shall maintain a written record of the inspection and any corrective actions taken resulting from the inspection. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 4, Minn. R. 7007.0800, subp. 5]
5.175.9	Corrective Actions: The Permittee shall take corrective action as soon as possible if any of the following occur: - any recorded operating parameter is outside the required operating range (e.g., total power input); or - the ESP or any of its components are found during the inspections to need repair. Corrective actions shall return operation to within the permitted range and/or include completion of necessary repairs identified during the inspection, as applicable. Corrective actions include, but are not limited to, those outlined in the) O & M Plan for the ESP. The Permittee shall keep a record of the type and date of any corrective action taken for the ESP. [Minn. R. 7007.0800, subp. 14, Minn. R. 7007.0800, subp. 2(A), Minn. R. 7007.0800, subp. 5]

Commented [A450]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Commented [A451]: This requirement is not necessary and not workable. The Nederman filter provides control for the diecast operations. The smog hogs are already required to be on during operations.

Requirement number	Requirement and citation
5.175.10	Pre-Filter and Cell Maintenance: The Permittee shall transport pre-filters and cells in leak-proof containers during cleaning, replacement, or performing other maintenance. The Permittee shall dispose of all lead-soiled materials including, but not limited to, dishwasher waste water, mop heads, rags, personal protective equipment (PPE), vacuum bags, and any other material soiled or otherwise in contact with lead as hazardous waste. [Minn. R. 7007.0800, subp. 2, Minn. R. ch. 7045]

6. Submittal/action requirements

This section lists most of the submittals required by this permit. Please note that some submittal requirements may appear in the Limits and Other Requirements section, or, if applicable, within a Compliance Schedule section.

Requirement number	Requirement and citation
TFAC 1	**Water Gremlin Co**
6.1.1	The Permittee must submit a semiannual deviations report: Due semiannually, by the 30th of January and July. The first semiannual report submitted by the Permittee must cover the calendar half-year in which the permit is issued. The first report of each calendar year covers January 1 - June 30. The second report of each calendar year covers July 1 - December 31. Submit this on form DRF-2 (Deviation Reporting Form). If no deviations have occurred, submit the signed report certifying that there were no deviations. [Minn. R. 7007.0800, subp. 6(A), Minn. R. 7007.0800, subp. 6(B)(2)]
6.1.2	The Permittee must submit a compliance certification: Due annually, by the 31st of January (for the previous calendar year). Submit this on form CR-04 (Annual Compliance Certification Report). This report covers all deviations experienced during the calendar year. If no deviations have occurred, submit the signed report certifying that there were no deviations. [Minn. R. 7007.0800, subp. 6(A), Minn. R. 7007.0800, subp. 6(D)]
6.1.3	The Permittee shall submit an annual report by the 31st of January. The report shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). The report shall describe the changes made at the facility resulting in an increase in regulated air emissions during the previous calendar year using the latest MPCA application forms. The report shall include information for any new, modified, or replaced Subject Items in the form of a revised Attachment 2 - Subject Item Summary. The report shall include the increased changes in emissions of any pollutants that have been listed as chemicals of potential interest (COPI) based on the current Air Emission Risk Analysis (AERA) Guidance. The description of the change must include the change in emissions and identification of the emission source that changed. The report shall be submitted with the annual Compliance Certification required by this permit. As part of the Annual Report, the Permittee shall verify and certify that the facility has maintained minor source status for New Source Review. [Minn. R. 7007.0500, subp. 3, Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
6.1.4	~~The Permittee shall submit a monthly Ambient Air Monitoring Report: due within 30 calendar days following the last day of each month after Initial Startup of the VOC monitors in accordance with the MPCA-approved Monitoring Plan. The report shall be certified by the responsible official as defined in Minn.R. 7007.0100, subp. 21(A). The VOC monitoring results shall be submitted to AQRoutineReport@pca.state.mn.us within 30 calendar days following the last day of the month following startup of the VOC monitors. [Minn. R. 7007.0800, subps. 5-6]~~
6.1.5	The Permittee shall submit excess emission/downtime report: Due 30 days after the end of each calendar quarter following permit issuance. Submit this on form DRF-1 (Excess Emissions Reporting) as amended. The EER shall indicate all periods of monitor bypass and exceedances of the limit including those allowed by an applicable standard, i.e. during startup, shutdown, and malfunctions, as well as a summary of audit results and frequencies. If no excess emissions, downtime or bypasses

Commented [A452]: See the comment letter. Ambient monitoring requirement should be removed.

Requirement number	Requirement and citation
	occurred during the quarter, submit a signed report supplying the necessary monitor data needed to verify this. [Minn. R. 7017.1110, subps. 1-2]
6.1.6	~~The Permittee shall submit a notification of the actual Date of Initial Startup due 15 calendar days after Initial Startup Date of the VOC monitors, as described in the approved revised ambient air monitoring plan. [Minn. R. 7007.0800, subp. 6]~~
6.1.7	~~The Permittee shall submit a 1,2 (trans-) Dichloroethylene VOC Solvent Usage Report due within 30 calendar days following the last day of each month. The report shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). The t-DCE VOC solvent usage report shall include tons per month of t-DCE containing solvent used and tons per month of t-DCE VOC emissions from 1,2 (trans-) Dichloroethylene containing solvent used. The report shall include any audit of t-DCE VOC solvent usage conducted during that month as a result of the t-DCE Quarterly Purchase Audit required elsewhere in this permit. The report shall be submitted to AQRoutineReport@pca.state.mn.us. This requirement to report on a monthly basis expires when MPCA approves discontinuation of VOC Ambient Air Monitoring. [Minn. R. 7007.0500, subp. 3, Minn. R. 7007.0800, subps. 5-6]~~
6.1.8	~~The Permittee shall submit a VOC Continuous Emission Monitor Report due within 30 calendar days following the last day of each month. The report shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). The VOC Continuous Emission Monitor report shall report daily emissions as measured ppmv Wet of Total Hydrocarbon Concentration as 1,2 (trans-) Dichloroethylene based on daily CEM readings. The report shall include any audit of t-DCE VOC solvent usage conducted during that month as a result of the Reconciliation of Predicted Stack Concentration and CEMS Readings required elsewhere in this permit. The report shall be submitted to AQRoutineReport@pca.state.mn.us. This requirement to report on a monthly basis expires when MPCA approves discontinuation of VOC Ambient Air Monitoring. [Minn. R. 7007.0500, subp. 3, Minn. R. 7007.0800, subps. 5-6, Minn. Stat. 116.07, subd. 9(2)]~~
COMG 1	**VOC and 1,2 (trans) Dichloroethylene Limits and VOC Coater, Water-Based Coater, UV Coater, and Solvent Distillation Operation Requirements.**
6.2.1	~~The Permittee shall submit an annual report by the 31st of January. The report shall document the VOC 365-day rolling sum calculations for the previous calendar year. The report shall be submitted with the annual Compliance Certification required by this permit. As part of the Annual Report, the Permittee shall verify and certify that the Facility has maintained minor source status for PSD and Part 70. [Minn. R. 7007.0800, subp. 2(A)]~~
6.2.2	The Permittee shall submit a notification: Due 30 calendar days before addition, replacement, or conversion of coaters authorized under COMG 1. The notification shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). The notification shall include the planned date for beginning of operations and the following forms: 1) Coaters not required to comply with COMG 5: MPCA forms GI-02, GI-03, GI-04 and GI-05B 2) Coaters required to comply with COMG 5: MPCA forms GI-05B and GI-05A, if control equipment is required under COMG 2, COMG 4 or COMG 8. [Minn. R. 7007.0500, subp. 3, Minn. R. 7007.0800, subps. 5-6]
6.2.3	The Permittee shall submit an annual report by the 31st of January. The report shall document the 1,2-(trans-) Dichloroethylene VOC 365-day rolling sum calculations for the previous calendar year. The report shall include the results of the 1,2-(trans-) Dichloroethylene VOC Quarterly Purchase Audits required elsewhere in this permit. The report shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). The report shall be submitted with the annual Compliance Certification required by this permit. As part of the Annual Report, the Permittee shall verify and certify that the Facility has maintained minor source status for PSD and Part 70. [Minn. R. 7007.0500, subp. 3, Minn. R. 7007.0800, subp. 2]

Commented [A453]: See the comment letter. Ambient monitoring requirement should be removed.

Commented [A454]: See the comment letter. Ambient monitoring requirement should be removed, along with this requirement.

Commented [A455]: See the comment letter. The ambient monitoring requirement should be removed.

Commented [A456]: Delete this requirement. These data are provided elsewhere through other requirements. This is redundant.

Requirement number	Requirement and citation
6.2.4	The Permittee shall submit a notification due 30 calendar days before replacement of control equipment authorized under COMG 11. The notification shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). The notification shall include the planned date for beginning of operations and form~~s~~ GI-05A. [Minn. R. 7007.0500, subp. 3, Minn. R. 7007.0800, subps. 5-6]
6.2.5	The Permittee shall submit a notification due 30 calendar days before replacement of control equipment authorized under COMG 12. The notification shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). The notification shall include the planned date for beginning of operations and form~~s~~ GI-05A. [Minn. R. 7007.0500, subp. 3, Minn. R. 7007.0800, subps. 5-6]
6.2.6	The Permittee shall submit a notification due 30 calendar days before replacement of control equipment authorized under COMG 14. The notification shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). The notification shall include the planned date for beginning of operations and form~~s~~ GI-05A. [Minn. R. 7007.0500, subp. 3, Minn. R. 7007.0800, subps. 5-6]
COMG 5	**Permanent Total Enclosure Requirements: Coating Rooms**
6.3.1	Weekly Reporting: The Permittee shall submit a weekly report due by 4:30pm on Friday each week that includes pressure drop readings, the door status, and daily alarm verification for each coating room in COMG 5. The report shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). The report shall be submitted to AQRoutineReport@pca.state.mn.us and must include any deviation from the approved minimum pressure drop, and/or door status, the actions taken to evaluate the reasons for the deviation, and the corrective actions taken to resolve the deviations. [Minn. R. 7007.0500, subp. 3, Minn. R. 7007.0800, subp. 2(A) & (B)]
6.3.2	The Permittee shall conduct a performance test due within 30 days of permit issuance and every 12 months thereafter to determine if each coating room in COMG 5 is a permanent total enclosure that meets the criteria of Method 204 of appendix M to 40 CFR pt. 51. The first test is due by the date specified above and all subsequent tests shall be completed every 12 months thereafter by the due date (month and day) and as described below. The performance test shall be conducted at worst-case conditions defined at Minn. R. 7017.2005, subp. 8 or at the operating conditions described at Minn. R. 7017.2025, subp. 2, using EPA Method 204, or other method approved by MPCA in the performance test plan approval. Testing conducted during the 60 days prior to the performance test due date will not reset the test due date for future testing as required by this permit or within a Notice of Compliance letter. Testing conducted more than 60 days prior to the performance test due date satisfies this test due date requirement but will reset future performance test due dates based on the performance test date. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]
6.3.3	The Permittee shall submit a report due monthly by the 15th of every month. The report shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). The report shall be submitted to AQRoutineReport@pca.state.mn.us and must contain the following: 1) Floor degradation discovered in the past month; and 2) Description of all corrective actions. [Minn. R. 7007.0500, subp. 3, Minn. R. 7007.0800, subp. 2(A) & (B)]
EQUI 120	**Emergency Generator Engine**
6.4.1	The Permittee shall submit a notification of date construction began: Due 30 calendar days after Date of Construction Start (or reconstruction). The report shall be certified by the responsible official as

Commented [A457]: Redundant to conduct frequent testing as the negative pressure alarms from 6.3.1 are sufficient.

Commented [A458]: The emergency generator is already installed and operating. The listed requirements in this section are not appropriate.

Requirement number	Requirement and citation
	defined in Minn. R. 7007.0100, subp. 21(A). Submit the name and number of the Subject Item and the date construction began. The notification shall be submitted electronically on Form CS-02. [40 CFR 60.7(a)(1), Minn. R. 7007.0500, subp. 3, Minn. R. 7019.0100, subp. 1]
6.4.2	The Permittee shall submit a notification of the actual date of initial startup: Due 15 calendar days after Initial Startup Date. The report shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). The notification shall be submitted electronically on Form CS-02. [40 CFR 60.7(a)(3), Minn. R. 7007.0500, subp. 3, Minn. R. 7019.0100, subp. 1]
6.4.3	The Permittee shall submit a notification of anticipated date for conducting opacity observations: Due 30 calendar days before Opacity Observation Date. The report shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). [40 CFR 60.7(a)(6), Minn. R. 7007.0500, subp. 3, Minn. R. 7019.0100, subp. 1]
6.4.4	The Permittee shall submit notification of the date construction of replacement began: Due 60 calendar days before Date of Construction or Replacement (or as soon as practicable). The report shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). Submit the information specified in 40 CFR Section 60.15(d)(1) through (7). The notification shall be submitted electronically on Form CS-02. [40 CFR 60.15(d), Minn. R. 7007.0500, subp. 3, Minn. R. 7011.0050]
~~EQUI 176~~	~~VOC CEMS (STRU 73)~~
6.5.1	~~The Permittee shall submit start-up notification: Due 10 working days after Startup of Monitor Date. The report shall be certified by the responsible official as defined in Minn. R. 7007.0100, subp. 21(A). The notification shall be submitted electronically on Form CS-02. [Minn. R. 7007.0500, subp. 3, Minn. R. 7007.0800, subp. 2(A)]~~
6.5.2	~~The Permittee shall conduct CEMS cylinder gas audit (CGA): Due by the end of every second QA operating quarter (calendar quarter in which there are at least 168 unit operating hours) except that a CGA is not required during any quarter in which a RATA is performed. The initial CGA must be performed within 180 days following certification of the CEMS. The CGAs shall be conducted according to the procedures outlined in Minn. R. 7017.1170, subp 4a(A). If the monitored emission unit is not in operation on the CGA due date, the owner or operator has a grace period of 168 operating hours to perform the CGA. [Minn. R. 7017.1170, subp. 4a]~~
6.5.3	~~The Permittee shall conduct a relative accuracy test audit: Due by the end of every fourth QA operating quarter (calendar quarter in which there are at least 168 unit operating hours). RATAs shall be conducted and frequency may be reduced according to the procedures outlined in Minn. R. 7017.1170, subp. 5a. If the monitored emission unit is not in operation on the RATA due date, the owner or operator has a grace period of 720 operating hours to perform the RATA. [Minn. R. 7017.1170, subp. 5a]~~
6.5.4	~~Installation Notification: due 60 days before installing the continuous emissions monitoring system. The notification shall include plans and drawings of the system. Additionally, the notification shall include manufacture, model, parameter, and serial numbers of the continuous emissions monitoring system. [Minn. R. 7017.1040, subp. 1]~~
STRU 1	**Smog Hog #15 Stack**
6.6.1	Particulate Matter: The Permittee shall conduct a performance test due before 180 days following issuance of Permit No. 12300341-101 and at a minimum every 60 months thereafter to verify the emission factor described in Appendix D, and determine overall control efficiency of control equipment train under COMG 11. The Commissioner will set the subsequent test frequency as stated in a Notice of Compliance (NOC) or

Commented [A459]: Delete the CEMS requirement. CEMS for STRU73 is not necessary nor useful. See comment letter for further information.

Commented [A460]: Not necessary to test each and every Smog Hog stack.

Requirement number	Requirement and citation
	Notice of Performance Test Verification (NOPTV) letter with review of the initial performance test. Subsequent tests shall be completed no less than every 60-months by the due date (month and day) based on the initial test date or more frequently as stated in the NOC/NOPTV letter. If the Commissioner sets a test frequency at less than every 60 months, the Permittee must apply for an administrative amendment to incorporate the prescribed test frequency into the permit. A major amendment is required to reduce the test frequency once set in the permit. The performance test shall be conducted at worst-case conditions defined at Minn. R. 7017.2005, subp. 8 or at the operating conditions described at Minn. R. 7017.2025, subp. 2, using EPA Reference Methods 5 and 202, or other method approved by MPCA in the performance test plan approval. The operating conditions during the test, and required recordkeeping and reporting are described in Appendix E. Testing conducted during the 60 days prior to a performance test due date will not reset the due date for future testing. Testing conducted more than 60 days prior to the specified due date satisfies this test due date requirement but will reset future performance test due dates based on the most recent performance test date. [Minn. R. 7007.0800, subps. 2(A) 2(B), Minn. R. 7009.0020-0090, Minn. R. 7017.2020, subp. 1, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
6.6.2	PM < 10 micron: The Permittee shall conduct a performance test due before 180 days following issuance of Permit No. 12300341-101 and at a minimum every 60 months thereafter to verify the emission factor described in Appendix D, and determine overall control efficiency of control equipment train under COMG 11. The Commissioner will set the subsequent test frequency as stated in a Notice of Compliance (NOC) or Notice of Performance Test Verification (NOPTV) letter with review of the initial performance test. Subsequent tests shall be completed no less than every 60-months by the due date (month and day) based on the initial test date or more frequently as stated in the NOC/NOPTV letter. Testing conducted during the 60 days prior to a performance test due date will not reset the due date for future testing. Testing conducted more than 60 days prior to the specified due date satisfies this test due date requirement but will reset future performance test due dates based on the most recent performance test date. [Minn. R. 7007.0800, ubps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. R. 7017.2020, subp. 1, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
6.7.3	PM < 2.5 micron: The Permittee shall conduct a performance test due before 180 days following issuance of Permit No. 12300341-101 and at a minimum every 60 months thereafter to verify the emission factor described in Appendix D, and determine overall control efficiency of control equipment train under COMG 12. The Commissioner will set the subsequent test frequency as stated in a Notice of Compliance (NOC) or Notice of Performance Test Verification (NOPTV) letter with review of the initial performance test.

Requirement number	Requirement and citation
	Subsequent tests shall be completed no less than every 60-months by the due date (month and day) based on the initial test date or more frequently as stated in the NOC/NOPTV letter. If the Commissioner sets a test frequency at less than every 60 months, the Permittee must apply for an administrative amendment to incorporate the prescribed test frequency into the permit. A major amendment is required to reduce the test frequency once set in the permit. The performance test shall be conducted at worst-case conditions defined at Minn. R. 7017.2005, subp. 8 or at the operating conditions described at Minn. R. 7017.2025, subp. 2, using EPA Reference Methods 201A and 202, or other method approved by MPCA in the performance test plan approval. The operating conditions during the test, and required recordkeeping and reporting are described in Appendix E. Testing conducted during the 60 days prior to a performance test due date will not reset the due date for future testing. Testing conducted more than 60 days prior to the specified due date satisfies this test due date requirement but will reset future performance test due dates based on the most recent performance test date. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. R. 7017.2020, subp. 1, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
6.7.4	Lead: The Permittee shall conduct a performance test due before 180 days following issuance of Permit No. 12300341-101 and at a minimum every 60 months thereafter to verify the emission factor described in Appendix D, and determine overall control efficiency of control equipment train under COMG 12. The Commissioner will set the subsequent test frequency as stated in a Notice of Compliance (NOC) or Notice of Performance Test Verification (NOPTV) letter with review of the initial performance test. Subsequent tests shall be completed no less than every 60-months by the due date (month and day) based on the initial test date or more frequently as stated in the NOC/NOPTV letter. If the Commissioner sets a test frequency at less than every 60 months, the Permittee must apply for an administrative amendment to incorporate the prescribed test frequency into the permit. If the Commissioner sets a test frequency at less than every 60 months, the Permittee must apply for an administrative amendment to incorporate the prescribed test frequency into the permit. A major amendment is required to reduce the test frequency once set in the permit. The performance test shall be conducted at worst-case conditions defined at Minn. R. 7017.2005, subp. 8 or at the operating conditions described at Minn. R. 7017.2025, subp. 2, using EPA Reference Methods 5 and 202, or other method approved by MPCA in the performance test plan approval. The operating conditions during the test, and required recordkeeping and reporting are described in Appendix E. Testing conducted during the 60 days prior to a performance test due date will not reset the due date for future testing. Testing conducted more than 60 days prior to the specified due date satisfies this test due date requirement but will reset future performance test due dates based on the most recent performance test date. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. R. 7017.2020, subp. 1, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
6.9.3	PM < 2.5 micron: The Permittee shall conduct a performance test due before 180 days following issuance of Permit No. 12300341-101 and at a minimum every 60 months thereafter to verify the emission factor described in Appendix D, and determine overall control efficiency of control equipment train under COMG 12. The Commissioner will set the subsequent test frequency as stated in a Notice of Compliance (NOC) or Notice of Performance Test Verification (NOPTV) letter with review of the initial performance test. Subsequent tests shall be completed no less than every 60-months by the due date (month and day) based on the initial test date or more frequently as stated in the NOC/NOPTV letter. If the Commissioner sets a test frequency at less than every 60 months, the Permittee must apply for an administrative amendment to incorporate the prescribed test frequency into the permit. A major amendment is required to reduce the test frequency once set in the permit.

6.11.2	PM < 10 micron: The Permittee shall conduct a performance test due before 24 months following issuance of Permit No. 12300341-101 and at a minimum every 60 months thereafter to verify the emission factor described in Appendix D, and determine overall control efficiency of control equipment train under COMG 12. The Commissioner will set the subsequent test frequency as stated in a Notice of Compliance (NOC) or Notice of Performance Test Verification (NOPTV) letter with review of the initial performance test. Subsequent tests shall be completed no less than every 60-months by the due date (month and day) based on the initial test date or more frequently as stated in the NOC/NOPTV letter. If the Commissioner sets a test frequency at less than every 60 months, the Permittee must apply for an administrative amendment to incorporate the prescribed test frequency into the permit. A major amendment is required to reduce the test frequency once set in the permit. The performance test shall be conducted at worst-case conditions defined at Minn. R. 7017.2005, subp. 8 or at the operating conditions described at Minn. R. 7017.2025, subp. 2, using EPA Reference Methods 201A and 202, or other method approved by MPCA in the performance test plan approval. The operating conditions during the test, and required recordkeeping and reporting are described in Appendix E. Testing conducted during the 60 days prior to a performance test due date will not reset the due date for future testing. Testing conducted more than 60 days prior to the specified due date satisfies this test due date requirement but will reset future performance test due dates based on the most recent performance test date. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. R. 7017.2020, subp. 1, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
6.11.3	PM < 2.5 micron: The Permittee shall conduct a performance test due before 24 months following issuance of Permit No. 12300341-101 and at a minimum every 60 months thereafter to verify the emission factor described in Appendix D, and determine overall control efficiency of control equipment train under COMG 12. The Commissioner will set the subsequent test frequency as stated in a Notice of Compliance (NOC) or Notice of Performance Test Verification (NOPTV) letter with review of the initial performance test. Subsequent tests shall be completed no less than every 60-months by the due date (month and day) based on the initial test date or more frequently as stated in the NOC/NOPTV letter. If the Commissioner sets a test frequency at less than every 60 months, the Permittee must apply for an administrative amendment to incorporate the prescribed test frequency into the permit. A major amendment is required to reduce the test frequency once set in the permit. The performance test shall be conducted at worst-case conditions defined at Minn. A major amendment is required to reduce the test frequency once set in the permit. The performance test shall be conducted at worst-case conditions defined at Minn. R. 7017.2005, subp. 8 or at the operating conditions described at Minn. R. 7017.2025, subp. 2, using EPA Reference Methods 5 and 202, or other method approved by MPCA in the performance test plan approval. The operating conditions during the test, and required recordkeeping and reporting are described in Appendix E. Testing conducted during the 60 days prior to a performance test due date will not reset the due date for future testing. Testing conducted more than 60 days prior to the specified due date satisfies this test due date requirement but will reset future performance test due dates based on the most recent performance test date. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. R.

Commented [A467]: Not necessary to test each and every Smog Hog stack.

6.15.1	Particulate Matter: The Permittee shall conduct a performance test due before 36 months following issuance of Permit No. 12300341-101 and at a minimum every 60 months thereafter to verify the emission factor described in Appendix D, and determine overall control efficiency of control equipment train under COMG 12. The Commissioner will set the subsequent test frequency as stated in a Notice of Compliance (NOC) or Notice of Performance Test Verification (NOPTV) letter with review of the initial performance test. Subsequent tests shall be completed no less than every 60-months by the due date (month and day) based on the initial test date or more frequently as stated in the NOC/NOPTV letter. If the Commissioner sets a test frequency at less than every 60 months, the Permittee must apply for an administrative amendment to incorporate the prescribed test frequency into the permit. A major amendment is required to reduce the test frequency once set in the permit. The performance test shall be conducted at worst-case conditions defined at Minn. R. 7017.2005, subp. 8 or at the operating conditions described at Minn. R. 7017.2025, subp. 2, using EPA Reference Methods 5 and 202, or other method approved by MPCA in the performance test plan approval. The operating conditions during the test, and required recordkeeping and reporting are described in Appendix E. Testing conducted during the 60 days prior to a performance test due date will not reset the due date for future testing. Testing conducted more than 60 days prior to the specified due date satisfies this test due date requirement but will reset future performance test due dates based on the most recent performance test date. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. R.

Commented [A468]: Not necessary to test each and every Smog Hog stack.

Testing conducted during the 60 days prior to a performance test due date will not reset the due date for future testing. Testing conducted more than 60 days prior to the specified due date satisfies this test due date requirement but will reset future performance test due dates based on the most recent performance test date. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. R. 7017.2020, subp. 1, Minn. Stat. 116.07, subd. 4a(a)]
STRU 32	**Smog Hog #18 Stack**
6.17.1	Particulate Matter: The Permittee shall conduct a performance test due before 36 months following issuance of Permit No. 12300341-101 and at a minimum every 60 months thereafter to verify the emission factor described in Appendix D, and determine overall control efficiency of control equipment train under COMG 12. The Commissioner will set the subsequent test frequency as stated in a Notice of Compliance (NOC) or Notice of Performance Test Verification (NOPTV) letter with review of the initial performance test. Subsequent tests shall be completed no less than every 60-months by the due date (month and day) based on the initial test date or more frequently as stated in the NOC/NOPTV letter. If the Commissioner sets a test frequency at less than every 60 months, the Permittee must apply for an administrative amendment to incorporate the prescribed test frequency into the permit. A major amendment is required to reduce the test frequency once set in the permit. The performance test shall be conducted at worst-case conditions defined at Minn. R. 7017.2005, subp. 8 or at the operating conditions described at Minn. R. 7017.2025, subp. 2, using EPA Reference Methods 5 and 202, or other method approved by MPCA in the performance test plan approval. The operating conditions during the test, and required recordkeeping and reporting are described in Appendix E. Testing conducted during the 60 days prior to a performance test due date will not reset the due date for future testing. Testing conducted more than 60 days prior to the specified due date satisfies this test due date requirement but will reset future performance test due dates based on the most recent performance test date. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. R.

Commented [A470]: Not necessary to test each and every Smog Hog stack.

Subsequent tests shall be completed no less than every 60-months by the due date (month and day) based on the initial test date or more frequently as stated in the NOC/NOPTV letter. If the Commissioner sets a test frequency at less than every 60 months, the Permittee must apply for an administrative amendment to incorporate the prescribed test frequency into the permit. A major amendment is required to reduce the test frequency once set in the permit. The performance test shall be conducted at worst-case conditions defined at Minn. R. 7017.2005, subp. 8 or at the operating conditions described at Minn. R. 7017.2025, subp. 2, using EPA Reference Method 12, or other method approved by MPCA in the performance test plan approval. The operating conditions during the test, and required recordkeeping and reporting are described in Appendix E. Testing conducted during the 60 days prior to a performance test due date will not reset the due date for future testing. Testing conducted more than 60 days prior to the specified due date satisfies this test due date requirement but will reset future performance test due dates based on the most recent performance test date. [Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. R. 7017.2020, subp. 1, Minn. Stat. 116.07, sund. 4a(a)]
STRU 34	**Smog Hog #20 Stack**
6.19.1	Particulate Matter: The Permittee shall conduct a performance test due before 48 months following issuance of Permit No. 12300341-101 and at a minimum every 60 months thereafter to verify the emission factor described in Appendix D, and determine overall control efficiency of control equipment train under COMG 12. The Commissioner will set the subsequent test frequency as stated in a Notice of Compliance (NOC) or Notice of Performance Test Verification (NOPTV) letter with review of the initial performance test. Subsequent tests shall be completed no less than every 60-months by the due date (month and day) based on the initial test date or more frequently as stated in the NOC/NOPTV letter. If the Commissioner sets a test frequency at less than every 60 months, the Permittee must apply for an administrative amendment to incorporate the prescribed test frequency into the permit. A major amendment is required to reduce the test frequency once set in the permit. The performance test shall be conducted at worst-case conditions defined at Minn. R. 7017.2005, subp. 8 or at the operating conditions described at Minn. R. 7017.2025, subp. 2, using EPA Reference Methods 5 and 202, or other method approved by MPCA in the performance test plan approval. The operating conditions during the test, and required recordkeeping and reporting are described in Appendix E. Testing conducted during the 60 days prior to a performance test due date will not reset the due date for future testing. Testing conducted more than 60 days prior to the specified due date satisfies this test due date requirement but will reset future performance test due dates based on the most recent performance test date. 6.21.2	PM < 2.5 micron: The Permittee shall conduct a performance test due within 180 days following issuance of Permit No. 12300341-101 and every 60 months thereafter to measure emissions to verify compliance with the PM2.5 emission limit of 0.01012 pounds per hour daily average. This shall be conducted concurrently with the PM10 performance test. The Permittee shall calculate emissions of all units operating during the test using the methods described elsewhere in this permit. The total emissions calculated in this manner shall be compared to the measured emissions during the test. If the calculated emissions are equal or higher than the measured emissions, the Permittee will continue to use the emission calculations prescribed in this permit. If measured emissions are higher than calculated emissions, the Permittee must submit a plan to revise emission factors within 30 days of receiving the Notice of Compliance. The Commissioner will set the subsequent test frequency as stated in a Notice of Compliance (NOC) or Notice of Performance Test Verification (NOPTV) letter with review of the initial performance test. Subsequent tests shall be completed no less than every 60-months by the due date (month and day) based on the initial test date or more frequently as stated in the NOC/NOPTV letter.

Commented [A476]: For STRU 73, Water Gremlin reserves the right to conduct any required testing at the applicable upstream emission units, similar to how Coater #6 was tested. Compliance with emission limits can be demonstrated best at the emission unit level. As has been discussed with MPCA on prior occasions, testing for extremely low levels of emissions in 15,000+ ACFM at STRU 73 will likely be problematic. This comment applies to all performance testing specified for STRU 73.

Commented [A477]: Same comment as above.

	based on the initial test date or more frequently as stated in the NOC/NOPTV letter. If the Commissioner sets a test frequency at less than every 60 months, the Permittee must apply for an administrative amendment to incorporate the prescribed test frequency into the permit. A major amendment is required to reduce the test frequency once set in the permit. The performance test shall be conducted at worst-case conditions defined at Minn. R. 7017.2005, subp. 8 or at the operating conditions described at Minn. R. 7017.2025, subp. 2, using EPA Reference Methods 201A and 202, or other method approved by MPCA in the performance test plan approval. The operating conditions during the test, and required recordkeeping and reporting are described in Appendix E. Testing conducted during the 60 days prior to a performance test due date will not reset the due date for future testing. Testing conducted more than 60 days prior to the specified due date satisfies this test due date requirement but will reset future performance test due dates based on the most recent performance test date. [Minn. R. 7007.0800, subps. 2(A) & 2(B), Minn. R. 7009.0020-0090, Minn. R. 7017.2020, subp. 1, Minn. Stat. 116.07, subd. 4a(a), To avoid major source under 40 CFR 70.2 & Minn. R. 7007.0200]
6.22.3	PM < 2.5 micron: The Permittee shall conduct a performance test due before 12 months following issuance of Permit No. 12300341-101 and at a minimum every 60 months thereafter to verify the emission factor described in Appendix D, and determine overall control efficiency of control equipment train under COMG 12. The Commissioner will set the subsequent test frequency as stated in a Notice of Compliance (NOC) or Notice of Performance Test Verification (NOPTV) letter with review of the initial performance test. The table below lists the insignificant activities that are currently at the Facility and their associated general applicable requirements.

Minn. R.	Rule description of the activity	General applicable requirement
Minn. R. 7007.1300, subp. 3(E)	Brazing, soldering, torch-cutting, or welding equipment	PM, variable depending on airflow Opacity <= 20% (Minn. R. 7011.0710/0715)
Minn. R. 7007.1300, subp. 3(F)	Individual units with potential emissions less than 2000 lb/year of certain pollutants	PM, variable depending on airflow Opacity <= 20% (Minn. R. 7011.0710/0715)

Appendix B. Maximum material content, emissions calculations, and analytical methods for coating operations

1) Maximum Material Content

Table B.1 below specifies the maximum allowable volatile organic compound (VOC), *trans*-(1,2)-Dichloroethylene (t-DCE), and solids content of the coatings used at the facility. The listed maximum coating usage, VOC content shall be used in calculations that determine worst-case VOC emissions. The maximum coating usage and solids content for VOC and water-based coatings is listed in Table B.1, and is limited to this content based on dispersion modeling. The actual solids content of the coatings applied on any given day will be recorded and shall be used to calculate particulate matter (PM) emissions from coaters that apply coating using sprayers. Particulate emissions from UV coatings will assume the coating is 100 percent solids unless an alternative emission factor is developed based on source testing. The VOC solvent, water-based coating, and ultraviolet (UV) cured coating allowed by Air Permit No. 12300341-101 for coating operations is FluoSolv WS (VOC), Tacolyn 3570 (water-based), and WGCS 300 (UV), respectively. The minimum allowable transfer efficiency for the spray application of VOC solvent and water-based coating is limited to 65 percent transfer efficiency.

Table B.1. Coater description, and maximum material content and processing rates at the time of permit issuance

Emission Unit ID	Emission Unit Description	Application	Coating Type	Maximum VOC Content [1] (wt. %)	Maximum t-DCE Content (wt. %)	Maximum Solids Content [2] (wt. %)	Maximum Solvent Usage (lb/hr)	Maximum Coating Usage[3] (lb/hr)
EQUI 82	Battery Terminal Post Coater 6	Spray	UV	0.44	0	100	0	0.82
EQUI 84	Battery Terminal Post Coater 9	Spray	UV	0.44	0	100	0	1.32
EQUI 85	Battery Terminal Post Coater 10	Drip	Water-based	0.00157	0	21	22.06	27.92
EQUI 87	Battery Terminal Post Coater 12	Dip	VOC	90	90	21	13.25	16.77
EQUI 88	Battery Terminal Post Coater 15	Drip/Spray	Water-based/ VOC	90	90	21	4.73	5.44
EQUI 89	Battery Terminal Post Coater 17	Dip	Water-based	0.0010.57	0	21	19.40	24.55
EQUI 92	Battery Terminal Post Coater 20	Dip	Water-based	0.0010.57	0	21	19.69	24.92
EQUI 93	Battery Terminal Post Coater 21	Dip	Water-based/ VOC	90	90	21	66.26	83.88
EQUI 94	Battery Terminal Post Coater 22	Drip	Water-based/ VOC	0.0010.57	0	21	15.03	19.03
EQUI 95	Battery Terminal Post Coater 23	Spray	Water-based/ VOC	90	90	21	2.36	2.71
EQUI 97	Battery Terminal Post Coater 25	Dip	Water-based	0.0010.57	0	21	5.25	6.65
EQUI 98	Battery Terminal Post Coater 26	D~~r~~ip	Water-based/ VOC	90	90	21	2.03	2.57
EQUI 99	Battery Terminal Post Coater 27	Dip	Water-based/ VOC	90	90	21	17.46	22.10
EQUI 100	Battery Terminal Post Coater 28	Drip	Water-based/ VOC	90	90	21	3.85	4.87
EQUI 116	Battery Terminal Post Coater 30	Dip	Water-based	0.0010.57	0	21	16.28	20.61

Commented [A494]: The VOC content of water-based coating is 0.001%, or 0.00001 lb VOC/lb solids.

Commented [A495]: Dip, not drip

Emission Unit ID	Emission Unit Description	Application	Coating Type	Maximum VOC Content [1] (wt. %)	Maximum t-DCE Content (wt. %)	Maximum Solids Content [2] (wt. %)	Maximum Solvent Usage (lb/hr)	Maximum Coating Usage[3] (lb/hr)
EQUI 117	South Building R&D Coater	Spray	UV	0.44	0	100	0	0.41
EQUI 172	Battery Terminal Post Coater 29	Dip	Water-based	0.001~~0.57~~	0	21	43.50	55.06
EQUI 219	Battery Terminal Post Coater 33	Spray	UV	0.44	0	100	0	7.92
EQUI 220	Battery Terminal Post Coater 34	Spray	UV	0.44	0	100	0	7.92
EQUI 233	Battery Terminal Post Coater 19	Dip	Water-based	0.001~~0.57~~	0	21	1.71	2.16
EQUI 240	Prototype Coater	Spray	UV	0.44	0	100	0	0.41

[1] The VOC content of VOC solvent coating is equal to the highest VOC content described in the FluoSolv WS safety data sheet (SDS). The calculated VOC content of the water-based coating includes VOC contributions from ~~both~~ Tacolyn 3570~~, and Foamex, an anti-foaming agent. While no anti-foaming agent will be used in the coating process, it was included to produce a conservative VOC emission rate from water-based coating operations.~~ The VOC content weight is based on the amount of solids in the mixed coating, not the total coating weight. The VOC content of emissions due to off-gassing from UV-cured coating was calculated as the product of the highest process and potential volatiles determined using the ASTM D5403-93 test method.

Commented [A496]: Foamex is no longer used at Water Gremlin.

[2] The maximum coating solids content is limited based on what was assumed in potential to emit calculations for PM/PM_{10}/$PM_{2.5}$ from spray coaters. Since dip and drip coating application methods do not generate over-spray, no particulate emissions are expected from these coaters.

[3] Maximum coating usage for solvent and water-based coaters is calculated from the maximum solvent usage and the maximum solids content allowed by the permit as follows:

Maximum Coating Usage (lb/hr) = [Maximum Solvent Usage (lb/hr)] / [1 – ((Maximum Solids Content (wt. %) / 100)]

Maximum coating usage for UV coaters was determined by a series of three spray tests in which the highest throughput was used. The highest throughput used is assumed to be the same in each nozzle and the solids content of WGCS 300 is 100 percent (no solvent). Therefore, the maximum coating usage for UV coaters is calculated as follows:

Maximum Coating Usage (lb/hr) = [Highest Single Nozzle Spray Rate (lb/hr)] x [Maximum Number of Nozzles]

2) Coating Emissions Calculations for VOC, *trans*-(1,2)-Dichloroethylene, and PM/PM_{10}/$PM_{2.5}$
Default factors to be used in emission calculations are listed as follows, unless an alternative value is approved using test methods defined in Section 3 below:
   a) *trans*-(1,2)-Dichloroethylene emissions from FluoSolv WS shall assume the weight percent of *trans*-(1,2)-Dichloroethylene is 90 percent (0.90 mass fraction), which is equal to the VOC fraction unless the exact *trans*-(1,2)-Dichloroethylene content is made public).

   b) *trans*-(1,2)-Dichloroethylene emissions from other approved formulation that contains *trans*-(1,2)-Dichloroethylene shall assume the weight percent of VOC is equal to the weight percent of *trans*-(1,2)-Dichloroethylene, unless the exact *trans*-(1,2)-Dichloroethylene content is made public. If the VOC content in the SDS is given as a range, the highest VOC content in the range shall be used.

   c) *trans*-(1,2)-Dichloroethylene fugitive emissions from Chemical Storage Room = 0.00466 tons per day. This number represents the total daily emissions (statistical average) from the chemical storage room and shall be used for the calculation of emissions against the VOC and *trans*-(1,2)-Dichloroethylene permit limits.

d) *trans*-(1,2)-Dichloroethylene fugitive emissions from Other Non-Coating Rooms = 0.00025 tons per day. This number represents the total emissions from non-coating rooms and shall be used for calculation of emissions being released from each of the following rooms:
   i) Shipping and Receiving
   ii) Northwest Die Cast
   iii) East Die Cast
   iv) Gravity Cast
   v) Coining
   vi) Locker Room
   vii) Lunch Room
   viii) Offices

Commented [A497]: These values contradict Section 5.2.10 with a value of 0.00324 tpd, and the calculation method for TDCE, which includes a single value for non-coating room fugitive emissions.

e) Particulate matter ($PM_{10}/PM_{2.5}$) emissions from spray VOC and water-based coatings shall be calculated using the formulas specified in the permit based on the actual solids content of the applied coating(s).

f) VOC emission calculations from water-based coatings shall assume the following emission factor:
   i) VOC = 0.0057 lb VOC/lb coating
   ii) Revised emission factors may be used upon approval of test results based on actual operation.

g) VOC emission calculations from degassing of UV coatings shall assume the following emission factor:
   i) VOC = 0.0044 lb VOC/lb coating
   ii) Revised emission factors may be used upon approval of test results based on actual operation.

h) Particulate matter ($PM_{10}/PM_{2.5}$) emissions from spray UV coatings shall assume the following emission factors:
   i) PM_{10} = 0.0024 lb PM_{10}/lb coating
   ii) $PM_{2.5}$ = 0.0024 lb $PM_{2.5}$/lb coating
   iii) Revised emission factors may be used upon approval of test results based on actual operation.

3) Analytical Methods

When manufacturer's data is not used for purchased material, and to determine content in recovered and waste material, the Permittee may test the coatings to change the default emission factors listed in Section 2 by following the testing requirements in Minn. R. 7017.2001 through 7017.2060 and the following:

a) Total VOC mass fraction in VOC-containing material
   i) VOC solvent coatings: the Permittee may use Method 24 in Appendix A to 40 CFR Part 60 to determine the VOC mass fraction and use that value as a substitute for the default VOC mass fraction in Section 2.
   ii) Water-based coatings: the Permittee may use EPA Method 8260B to determine the mass fraction of VOCs in the water-based coating. The calculated VOC mass fraction used to substitute the default value in Section 2 shall include the VOC contribution from anti-foaming agents (e.g. Foamex).
   iii) UV coatings: The Permittee may use ASTM D5403-93 for reactive coating material such as UV coatings in which some of the volatile content react to form solids and are not emitted to the atmosphere. The Permittee may use that value as a substitute for the default VOC mass fraction in Section 2.
   iv) Other Methods approved by MPCA may be used pursuant to Minn. R. 7017.2050.
   v) If VOC results are below detection levels, the Permittee shall use the method detection level used for the analysis to report content value and use for emission calculations.

b) Determination of total VOC and *trans*-(1,2)-Dichloroethylene mass fraction in waste coating material

i) Use EPA method 311 in Appendix A to 40 CFR part 63.
ii) Other Methods approved by MPCA may be used pursuant to Minn. R. 7017.2050.
iii) If *trans*-(1,2)-Dichloroethylene results are below detection levels, the analytical detection level must be used to report the VOC content value to be used in emission calculations.
iv) This analysis shall be conducted for every batch of waste to be shipped off-site if being used in for calculation of *trans*-(1,2)-Dichloroethylene emissions. A composite sample may be used to represent the composition of every batch to be shipped as waste. After a minimum of 30 months of testing shipments, the Permittee may submit for approval a proposal to define the conditions under which subsequent shipments do not need to be re-tested. The proposal must be supported with actual test data of shipment, the associated past operating records and projections of future operating conditions.

c) Determination of total VOC and *trans*-(1,2)-Dichloroethylene mass fraction in material recovered by the distiller
Note: This analysis is only required if a *trans*-(1,2)-Dichloroethylene mass fraction other than 100% is assumed to calculate amount of recovered material or amount of emissions.
i) Use a gas chromatography method such as EPA method 311 in Appendix A to 40 CFR part 63.
ii) Other Methods approved by MPCA may be used pursuant to Minn. R. 7017.2050.
iii) If *trans*-(1,2)-Dichloroethylene results are below detection levels, the analytical detection level must be used to report the VOC content value to be used in emission calculations.
iv) This analysis shall be conducted for every batch to be used for calculation of *trans*-(1,2)-Dichloroethylene emissions. After a minimum of 30 months of testing recovered material, the Permittee may submit for approval a proposal to define the conditions under which subsequent recovered material batches do not need to be re-tested. The proposal must be supported with actual test data of recovered batches, the associated past operating records and projections of future operating conditions.

d) Determination of HAP content in coating material
i) The Permittee may rely on formulation data provided by the manufacturer or supplier, such as the material safety data sheet (MSDS) or safety data sheet (SDS), as long as it represents each HAP compound in the material that is present at 0.1 percent by mass or more for OSHA-defined carcinogens as specified in 29 CFR 1910.1200(d)(4) and at 1.0 percent by mass or more for other HAP compounds.

e) Determination of *trans*-(1,2)-Dichloroethylene in indoor air of non-coating rooms
i) When required by this permit, or if the Permittee wishes to change the emission rates in Sections 2c and 2d of this Appendix, the Permittee shall perform indoor air testing in the following non-coating rooms:
(a) Chemical Storage
(b) Shipping and Receiving
(c) Northwest Die Cast
(d) East Die Cast
(e) Gravity Cast
(f) Coining
(g) Locker Room
(h) Lunch Room
(i) Offices
ii) Use EPA Method TO-15 with Summa Canisters using the following guidelines:
(a) Remediation Division Vapor investigation and mitigation decision best management practices at https://www.pca.state.mn.us/sites/default/files/c-rem3-06.pdf and Vapor intrusion best management practices | Minnesota Pollution Control Agency (state.mn.us)

(b) Remediation Division Vapor mitigation best management practices at https://www.pca.state.mn.us/sites/default/files/aq-ei6-01i.pdf. This requirement terminates when MPCA terminates the Administrative Order.

iii) The revised emission rates shall be used in daily emissions calculations described in the permit immediately following MPCA-approval of the indoor air test report.

Commented [A498]: We believe this link is incorrect. This is the Jan 17, 2020, Administrative Order. Is this what MPCA meant to include? https://www.pca.state.mn.us/waste/vapor-intrusion-best-management-practices

Appendix C. NAAQS modeling and AERA parameters

Tables C1-C6 of this appendix list the parameters used in the April 2022 $PM_{10}/PM_{2.5}$, NOx, and Lead air dispersion modeling at the facility. The parameters described the operation of the facility at the maximum permitted capacity. The purpose of listing these parameters is to provide a benchmark for future changes.

Table C1: PM10 Point Source (24-hour) Note: Note: EQUI 160, EQUI 117, EQUI 223-232, and EQUI 240 operations are limited to 5 am to 11 pm daily

Table C4: Unit Emission Rate (1, 3, 8, 24, Month, Annual) Note: EUQI 160, EQUI 117, EQUI 223-232, and EQUI 240 operations are limited to 5 am to 11 pm daily
The unit emission rate indicates that modeling was conducted at the stacks that vent more than one unit. Lead NAAQS for 3 month averaging time and annual is for health benchmark emission limit at STRUs.

Appendix D. Emission factors for lead processing units

Table D.1 below specifies the emission factors to be used in calculation of stack and fugitive emissions from lead processing units as required by the permit. The permit also requires recurring performance testing at each stack to verify emission factors to be used in calculation of stack and fugitive emissions from each lead processing unit. The Permittee shall keep this appendix up to date with emission factors derived from the most-recent MPCA-approved performance test results.

Table D.1: List of emission factors for lead processing units

Emission Unit ID	Emission Unit Description	Nederman ID	Smog Hog ID	Stack/ Vent ID	Uncontrolled PM (lb/lb Lead-Containing Material)	Uncontrolled PM10/PM2.5 (lb/lb Lead-Containing Material)	Uncontrolled Lead (lb/lb Lead-Containing Material)	Controlled Lead[1] (lb/lb Lead-Containing Material)

[1] At the time of permit issuance, the emission factors in Table D.1 are based on recent applicable stack tests at the inlet to emission stacks or control equipment and are applied to similar process equipment. For diecast operations, capture efficiency to the inlet of control equipment is assumed to be 95% and therefore the measured emission factors at the inlet of the pollution control equipment must be divided by 0.95 to represent the total uncontrolled emissions. The die casting uncontrolled emission factors in table D.1 represent this correction to the stack testing measurements at the inlet of the control equipment. After diecast stack tests are conducted, emission factors will be updated here and in recordkeeping calculations.

Appendix E. Performance test operating conditions and recordkeeping

1. VOC and particulate matter stack testing for UV coaters (STRU 73 or at each individual coater).

This protocol applies if the Permittee wishes to revise the approved emission factors for spray UV coaters in Appendix B.

1.1 Pollutants and emission rates

1.1.1 Test for total particulate matter, and report as grains per dry standard cubic foot. Testing must include organic and inorganic condensable particulate matter. The test method must be approved as part of the test plan.

1.1.2 Test for PM_{10}, and report results as an emission rate, in pound PM_{10} per hour, and as an emission factor, in pound PM_{10} per pound of coating (as applied). This test should be done concurrently with the test for $PM_{2.5}$ and must include organic and inorganic condensable particulate matter. The test method must be approved as part of the test plan.

1.1.3 Test for $PM_{2.5}$, and report results as an emission rate, in pound $PM_{2.5}$ per hour, and as an emission factor, in pound $PM_{2.5}$ per pound of coating (as applied). This test should be done concurrently with the test for PM_{10} and must include organic and inorganic condensable particulate matter. The test method must be approved as part of the test plan.

1.1.4 Test for VOC, and report as pound VOC per hour and pound VOC per pound of coating (as applied). The test method must be approved as part of the test plan.

1.1.5 Test for overall control efficiency of control equipment, if applicable. The test method must be approved as part of the test plan.

1.2 Operating conditions

1.2.1 The only spray coating operation allowed during the VOC and particulate matter test are UV coaters.

1.2.2 During the VOC test, no 1,2-(trans-) Dichloroethylene VOC coating operations may occur.

1.2.3 If testing at STRU 73, the coating room must be operated during the test in compliance with pressure drop limits, door status, and proper operation of the alarm system.

1.2.4 If testing an individual coater, the permittee must submit a test plan for approval for the sampling location and configuration to ensure the emissions are properly sampled at the individual coater.

1.2.5 The Permittee shall target worst-case conditions to be allowed by the permit, including coating application rate and coating solids content.

1.3 Operating records

The following operating records shall be recorded, including calculations, during the time of each test run:

1.3.1 The amount of UV coating applied, in pound per hour, during each test run for each coater in operation.

1.3.2 The total amount of UV coating applied, in pound per hour, during each test run.

1.3.3 Type of parts being coated by each coater during the test.

1.3.4 During the particulate test, list the other coating operations running at the time of the test.

1.3.5 During the VOC test, list the other coating operations running at the time of the test, including operating rates.

1.3.6 If testing at STRU 73, pressure drop readings in the coating room, the door status, and daily alarm verification. The report must include reports of any deviation from the approved minimum pressure

drop and door status at the beginning and end of each test run, and if an alarm is triggered during any test run.

1.3.7 The specific UV coating applied during the test.

1.3.8 If testing for control efficiency or controlled emission factor, the conditions of operation of control equipment based on required permit operating parameters for the control equipment.

1.4 Test results

1.4.1 The results of the test must be reported as an emissions rate, in pounds per hour, and as an emission factor, in pound pollutant per pound of coating (as applied) and in pound pollutant per pound solids (as applied).

2. Particulate matter and 1,2-(trans-) Dichloroethylene stack testing for 1,2-(trans-) Dichloroethylene VOC spray coaters (STRU 73)

This protocol applies if the Permittee wishes to revise the approved emission factors for 1,2-(trans-) Dichloroethylene VOC coaters in Appendix B.

2.1 Pollutants and emission rates

2.1.1 Test for total particulate matter, and report as grains per dry standard cubic foot. Testing must include organic and inorganic condensable matter. The test method must be approved as part of the test plan.

2.1.2 Test for PM_{10}, and report results as an emission rate, in pound PM_{10} per hour, and as a transfer efficiency based on test results, in pound PM_{10} per pound of solids (as applied). This test should be done concurrently with the test for $PM_{2.5}$. It must include organic and inorganic condensable matter. The test method must be approved as part of the test plan.

2.1.3 Test for $PM_{2.5}$, and report results as an emission rate, in pound $PM_{2.5}$ per hour, and as a transfer efficiency based on test results, in pound $PM_{2.5}$ per pound of solids (as applied). This test should be done concurrently with the test for PM_{10}. It must include organic and inorganic condensable matter. The test method must be approved as part of the test plan.

2.1.4 1,2-(trans-) Dichloroethylene, in pound per hour and pound VOC per pound of coating (as applied), as measured by the stack test method that speciates for 1,2-(trans-) Dichloroethylene. The test method must be approved as part of the test plan.

~~2.1.5 Continuous emission monitor (CEM) emission rates shall be reported as parts per million, wet VOC, parts per million, wet 1,2 (trans) Dichloroethylene (show conversion based on molecular weights), and pound per hour 1,2 (trans) Dichloroethylene by using measured concentrations and measured flue gas rates during the test. The measurements must specifically measure concentration during the time of each of the stack test runs conducted that speciates for 1,2-(trans-) Dichloroethylene.~~

~~2.1.6~~2.1.5 Test for overall control efficiency of control equipment, if applicable. The test method must be approved as part of the test plan.

Commented [A499]: See previous comments and comment letter.

2.2 Operating Conditions

2.2.1 If at all possible, only 1,2-(trans-) Dichloroethylene coaters should be operated during the test.

2.2.2 The coating rooms must be operated during the test in compliance with pressure drop limits, door status, and proper operation of the alarm system.

2.2.3 The Permittee shall target worst-case conditions to be allowed by the permit.

2.3 Operating records

The following operating records shall be recorded during the time of each testing run, including calculations:

2.3.1 Identification of each of the 1,2-(trans-) Dichloroethylene coaters in operation during the test, specifying the type of coater in operation (spray or dip/drip).

2.3.2 The amount of 1,2-(trans-) Dichloroethylene coating applied, in pound per hour, by each of the spray coaters operating during the test.

2.3.3 The total amount of 1,2-(trans-) Dichloroethylene coating applied by spraying, in pound per hour, during the test.

2.3.4 The amount of 1,2-(trans-) Dichloroethylene coating applied, in pound per hour, by each of the dip/drip coaters operating during the test.

2.3.5 Type of parts being coated by each coater during the test.

2.3.6 List the other non-1,2-(trans-) Dichloroethylene coating operations running at the time of the test.

2.3.7 Pressure drop readings in the coating room, the door status, and daily alarm verification. The report must also include records any deviation from the approved minimum pressure drop, and door status at the beginning and end of each test run, and if an alarm is triggered during any test run.

2.4 Test results

2.4.1 The results of the stack test must be reported as an emissions rate, in pounds per hour, and as a transfer efficiency based on test results, in pound PM_{10} per pound of solids by spray coating (as applied).

2.4.2 The results of the stack test must be reported as an emissions rate, in pounds per hour, and as a transfer efficiency based on test results, in pound $PM_{2.5}$ per pound of solids by spray coating (as applied).

2.4.3 The results of the stack test must be reported as an emissions rate, in pounds per hour, and in pound 1,2-(trans-) Dichloroethylene per pound of 1,2-(trans-) Dichloroethylene coating (as applied).

2.4.4 The results of the concurrent CEM measurements shall be reported as described in Section 2.1.5 above.

3. Particulate matter stack testing for water-based spray coaters (STRU 73 or at each individual coater)

This protocol applies if the Permittee wishes to revise the approved emission factors for water-based coaters in Appendix B.

3.1 Pollutants and emission rates

3.1.1 Test for total particulate matter, and report as grains per dry standard cubic foot. Testing must include organic and inorganic condensable matter. The test method must be approved as part of the test plan.

3.1.2 Test for PM_{10}, and report results as an emission rate, in pound PM_{10} per hour, and as a transfer efficiency based on test results, in pound PM_{10} per pound of solids (as applied). This test should be done concurrently with the test for $PM_{2.5}$. It must include organic and inorganic condensable matter. The test method must be approved as part of the test plan.

3.1.3 Test for $PM_{2.5}$, and report results as an emission rate, in pound $PM_{2.5}$ per hour and as a transfer efficiency based on test results, in pound $PM_{2.5}$ per pound of solids (as applied). This test should be done concurrently with the test for PM_{10}. It must include organic and inorganic condensable matter. The test method must be approved as part of the test plan.

3.1.4 Test for overall control efficiency of control equipment, if applicable. The test method must be approved as part of the test plan.

3.2 Operating Conditions

3.2.1 During the tests, the only operation(s) allowed during the test are the water-based spray units.

3.2.2 If at all possible, all authorized water-based spray coaters must be online at the time of the test and the applied coatings must represent the highest range of solid content used.

3.2.3 If testing at STRU 73, the coating room must be operated during the test in compliance with pressure drop limits, door status, and proper operation of the alarm system.

3.2.4 If testing an individual coater, the permittee must submit a test plan for approval for the sampling location and configuration to ensure the emissions are properly sampled at the individual coater.

3.2.5 The Permittee shall target worst-case conditions to be allowed by the permit, including coating application rates and coating solids content.

3.3 Operating records

The following operating records shall be recorded during the time of each testing run, including calculations:

3.3.1 Identification of each water-based spray coater in operation during the test.

3.3.2 The amount of water-based coating applied, in pound per hour, by each of the coaters operating during the test.

3.3.3 The total amount of water-based coating applied, in pound per hour, during the test.

3.3.4 The solids content in the applied coatings for each coater, in weight percent, and the total amount of solids applied per hour for each coater during each test run.

3.3.5 The total amount of water-based coating solids applies, in pound per hour, during the test.

3.3.6 Type of parts being coated by each coater during the test.

3.3.7 List the other non-spray coating operations running at the time of the test.

3.3.8 If testing at STRU 73, the pressure drop readings in the coating room, the door status, and daily alarm verification. The report must also include records any deviation from the approved minimum pressure drop, and door status at the beginning and end of each test run, and if an alarm is triggered during any test run.

3.3.9 If testing for control efficiency or controlled emission factor, the conditions of operation of control equipment based on required permit operating parameters for the control equipment.

3.4 Test results

3.4.1 The results of the test must be reported as an emissions rate, in pounds per hour, and as a transfer efficiency based on test results, in pound pollutant per pound of solids (as applied).

4. Particulate matter stack testing for all coating operations at STRU 73

4.1 Pollutants and emission rates

4.1.1 Test for total particulate matter, and report as grains per dry standard cubic foot. Testing must include organic and inorganic condensable matter. The test method must be approved as part of the test plan.

4.1.2 Test for PM_{10}, and report results as an emission rate, in pound PM_{10} per hour. This test should be done concurrently with the test for $PM_{2.5}$. It must include organic and inorganic condensable matter. The test method must be approved as part of the test plan.

4.1.3 Test for $PM_{2.5}$, and report results as an emission rate, in pound $PM_{2.5}$ per hour. This test should be done concurrently with the test for PM_{10}. It must include organic and inorganic condensable matter. The test method must be approved as part of the test plan.

4.2 Operating Conditions

4.2.1 If at all possible, all authorized coaters normally in operation must be online at the time of the test.

4.2.2 The required pollution control equipment must be operated under conditions representative of normal operation.

4.2.3 The coating room must be operated during the test in compliance with pressure drop limits, door status, and proper operation of the alarm system.

4.2.4 The Permittee shall target worst-case conditions to be allowed by the permit, including spray coating application rates and coating solids content.

4.3 Operating records

The following operating records shall be recorded during the time of each testing run, including calculations:

4.3.1 Identification of each water-based spray coater in operation during the test.

4.3.2 The amount of water-based coating applied by spraying, in pound per hour, by each of the coaters operating during the test.

4.3.3 The total amount of water-based coating applied by spraying, in pound per hour, during the test.

4.3.4 The solids content in the applied coatings for each water-based spray coater, in weight percent, and the total amount of solids applied per hour for each water spray coater during each test run.

4.3.5 The total amount of water-based coating solids applied, in pound per hour, during the test.

4.3.6 Type of parts being coated by each water-based spray coater during the test.

4.3.7 Identification of each water-based dip/drip coater in operation during the test.

4.3.8 The amount of water-based coating applied by dip/drip, in pound per hour, by each of the coaters operating during the test.

4.3.9 The total amount of water-based coating applied by dip/drip, in pound per hour, during the test.

4.3.10 Identification of each 1,2-(trans-) Dichloroethylene spray coater in operation during the test.

4.3.11 The amount of 1,2-(trans-) Dichloroethylene coating applied by spraying, in pound per hour, by each of the coaters operating during the test.

4.3.12 The total amount of 1,2-(trans-) Dichloroethylene coating applied by spraying, in pound per hour, during the test.

4.3.13 The solids content in the applied 1,2-(trans-) Dichloroethylene coatings for each spray coater, in weight percent, and the total amount of solids applied per hour for each coater during each test run.

4.3.14 The total amount of 1,2-(trans-) Dichloroethylene coating solids applied by spraying during the test, in pound per hour, during the test.

4.3.15 Type of parts being spray coated by each 1,2-(trans-) Dichloroethylene spray coater during the test.

4.3.16 Identification of each 1,2-(trans-) Dichloroethylene dip/drip coater in operation during the test.

4.3.17 The amount of 1,2-(trans-) Dichloroethylene coating applied by dip/drip, in pound per hour, by each of the 1,2-(trans-) Dichloroethylene dip/drip coaters operating during the test.

4.3.18 The total amount of 1,2-(trans-) Dichloroethylene coating applied by dip/drip, in pound per hour, during the test.

4.3.19 Identification of each UV spray coater in operation during the test.

4.3.20 The amount of UV coating applied, in pound per hour, during each test run for each UV coater in operation.
4.3.21 The total amount of UV coating applied, in pound per hour, during each test run.
4.3.22 Type of parts being coated with UV coating during each test run.
4.3.23 Pressure drop readings in the coating room, the door status, and daily alarm verification. The report must also include records any deviation from the approved minimum pressure drop, and door status at the beginning and end of each test run, and if an alarm is triggered during any test run.
4.3.24 (If applicable)$Document the condition of the HEPA or other wall used filters for each spray coater operating during the test, including, but not limited to, alignment, saturation, and tears and holes.

4.4 Test results
4.4.1 The results of the test must be reported as an emissions rate, in pounds per hour.
4.4.2 The Permittee shall calculate PM_{10} and $PM_{2.5}$ emissions of all units operating during the test using the methods described elsewhere in this permit. The total emissions calculated in this manner shall be compared to the measured emissions during the test. If the calculated emissions are equal or higher than the measured emissions, the Permittee will continue to use the emission calculations prescribed in this permit. If measured emissions are higher than calculated emissions, the Permittee must submit a plan to revise emission factors within 30 days of receiving the Notice of Compliance.

5. Particulate matter stack testing for lead processing units

5.1 Pollutants and emission rates
5.1.1 Test for PM_{10} at the inlet (prior to control equipment) and outlet (exiting the stack), and report as an emission rate, in pound PM_{10} per hour, and as an emission factor, in pound PM_{10} per mass throughput. This test should be done concurrently with the test for $PM_{2.5}$. Testing must include organic and inorganic condensable particulate matter. The test method must be approved as part of the test plan.
5.1.2 Test for $PM_{2.5}$ at the inlet (prior to control equipment) and outlet (exiting the stack), and report as an emission rate, in pound $PM_{2.5}$ per hour, and as an emission factor, in pound $PM_{2.5}$ per mass throughput. This test should be done concurrently with the test for PM_{10}. Testing must include organic and inorganic condensable particulate matter. The test method must be approved as part of the test plan.
5.1.3 Test for overall control efficiency of control equipment train, if applicable.

5.2 Operating Conditions
5.2.1 During each test run, all the emission units emitting through the stack being tested must be operated.
5.2.2 If at all possible, all authorized lead processing units and other sources of PM_{10} and $PM_{2.5}$ must be operated at the capacity authorized by the permit.
5.2.3 The pollution control equipment must be operated under conditions representative of normal operation.
5.2.4 The Permittee shall target worst-case conditions to be allowed by the permit, including processing rates for lead processing units and other sources of PM_{10} and $PM_{2.5}$. If this is not attained, the Permittee shall scale up reported emission rates, in pound per hour, to represent the capacity and

maximum process rates allowed by the permit in order to show compliance with the applicable emission limit(s) and verify emission factor(s).

5.3 Operating records.

The following operating records shall be recorded for during the time of each testing run, including calculations:

5.3.1 Total process throughput for each lead processing unit and other sources of PM_{10} and $PM_{2.5}$ being tested during each test run.

5.3.1.1 For emission units physically ducted to specific control equipment and/or stack, report the total process throughput of each lead processing unit and other PM_{10} and $PM_{2.5}$ source operated during the test.

5.3.1.2 For emission units operating in a room in which fugitive emissions vent to building fans/vents, report the total process throughput of each lead processing unit and other PM_{10} and $PM_{2.5}$ source operating in that room.

5.3.2 Documentation showing the electrostatic precipitator (Smog Hog) associated with the lead processing unit was operating at the time of the test.

5.3.3 Pressure drop across the Stage 1 and Stage 2 filters associated with the lead processing unit was operating at the time of the test.

5.3.4 Document the condition of the Stage 1 and Stage 2~~,~~ filters based on required permit operating parameters for the filters.

5.4 Test Results

The test results must be calculated and reported as follows:

5.4.1 Inlet mass rate of PM_{10} and $PM_{2.5}$ prior to the pollution control equipment, in pound PM_{10}/$PM_{2.5}$ per hour.

5.4.2 Outlet mass rate of PM_{10} and $PM_{2.5}$ exiting the stack, in pound PM_{10}/$PM_{2.5}$ per hour.

5.4.3 Overall control efficiency of the control equipment train used during the test.

5.4.4 Uncontrolled emission factor, reported as pound PM_{10}/$PM_{2.5}$ per mass throughput.

5.4.5 Controlled emission factor, reported as pound PM_{10}/$PM_{2.5}$ per mass throughput.

6. Lead stack testing for lead processing units

6.1 Pollutants and emission rates

6.1.1 Test for lead at the inlet (prior to control equipment) and outlet (exiting the stack), and report as an emission rate, pound lead per hour, and as an emission factor, in pound lead per mass throughput. This test should be done concurrently with the test for PM_{10} and $PM_{2.5}$. The test method must be approved as part of the test plan.

6.2 Operating Conditions

6.2.1 During the tests, all emission units emitting through the stack being tested must be in operation.

6.2.2 If at all possible, all authorized lead processing units must be operated at the capacity authorized by the permit.

6.2.3 The pollution control equipment must be operated under conditions representative of normal operation.

6.2.4 The Permittee shall target worst-case conditions to be allowed by the permit, including processing rates for lead-processing units. If this is not attained, the Permittee shall scale up reported emission rates, in pound per hour, to represent the capacity and maximum process rates allowed by the

permit in order to show compliance with the applicable emission limit(s) and verify emission factor(s).

6.3 Operating records. The following operating records shall be recorded during the time of each testing run, including calculations:

6.3.1 Total process throughput for each lead-processing unit being tested during each test run.

6.3.1.1 For emission units physically ducted to specific control equipment and/or stack, report the process throughput of each lead-processing unit operated during the test as well as the total process throughput of all lead-processing unit venting to the tested control equipment train or stack outlet at the time of the test.

6.3.1.2 For emission units operating in a room in which fugitive emissions vent to building fans/vents, report the process throughput of each lead-processing unit operating in that room as well as the total process throughput of all lead-processing unit operating in that room at the time of the test.

6.3.2 Documentation showing the electrostatic precipitator (Smog Hog) associated with the lead processing unit was operating at the time of the test.

6.3.3 Pressure drop across the Stage 1 and Stage 2 filters in each Nederman filter. associated with the lead processing unit was operating at the time of the test.

6.3.4 Document the condition of the Stage 1 and Stage 2~~,~~ filters based on required permit operating parameters for the filters.

6.4 Test results

The test results must be calculated and reported as follows:

6.4.1 Inlet mass rate of lead prior to the pollution control equipment, in pound lead per hour.

6.4.2 Outlet mass rate of lead exiting the stack, in pound lead per hour.

6.4.3 Overall control efficiency of the control equipment train used during the test.

6.4.4 Uncontrolled emission factor, expressed as pound lead per mass throughput.

6.4.5 Controlled emission factor, expressed as pound lead per mass throughput.

Table E1: Performance Test Limits and Recordkeeping Items

Subject Item	Stack Description (Associated Emission Units)	Short-Term Throughput Limits with Target Rates, Process Parameters and Special Considerations for Test Plans.	Throughput Limits and Control Equipment Parameters to monitor during testing	Control Equipment Operating Parameters
STRU 1	Smog Hog #15 Stack (EQUIs 101, 102, 103, 104, and 221)	Process Throughput ≤ 9,920 pounds per hour	Track individual unit process throughput and total process throughput for EQUIs 101, 102, 103, and 104 for each test run. TREA 1 Operation of the Continuous Parameter Monitoring System (CPMS) TREA 60 Pressure Drop	COMG 11: Control Efficiency for PM/ PM_{10}/$PM_{2.5}$ ≥ 97 percent control efficiency Control Efficiency for Lead ≥ 86 percent control efficiency TREA 1: CPMS operating and recording properly TREA 60: Stage 1 Filter Pressure Drop ≥ 0.0001 and ≤ 0.600 kilopascal Stage 2 Filter Pressure Drop ≥ 0.0001 and ≤ 0.800 kilopascal
STRU 15	Smog Hog #1 Stack (EQUIs 121, 122, and 123)	Process Throughput ≤ 1,565 pounds per hour	Track individual unit process throughput and total process throughput for EQUIs 121, 122, and 123 for each test run. TREA 25 Operation of the Continuous Parameter Monitoring System (CPMS) TREA 61 Pressure Drop	COMG 12: Control Efficiency for PM/ PM_{10}/$PM_{2.5}$ ≥ 86.6 percent control efficiency TREA 25: CPMS operating and recording properly TREA 61: Stage 1 Filter Pressure Drop ≥ 0.0001 and ≤ 0.600 kilopascal Stage 2 Filter Pressure Drop ≥ 0.0001 and ≤ 0.800 kilopascal
STRU 16	Smog Hog #2 Stack (EQUIs 124, 125, 126, and 157)	Process Throughput ≤ 1,265 pounds per hour	Track individual unit process throughput and total process throughput for EQUIs 124, 125, 126 and 157 for each test run. TREA 26 Operation of the Continuous Parameter Monitoring System (CPMS) TREAs 62 and 63 Pressure Drop	COMG 12: Control Efficiency for PM/ PM_{10}/$PM_{2.5}$ ≥ 86.6 percent control efficiency TREA 26: CPMS operating and recording properly TREAs 62 and 63: Stage 1 Filter Pressure Drop ≥ 0.0001 and ≤ 0.600 kilopascal Stage 2 Filter Pressure Drop ≥ 0.0001 and ≤ 0.800 kilopascal
STRU 17	Smog Hog #3 Stack (EQUIs 127, 128, and 129)	Process Throughput ≤ 750 pounds per hour	Track individual unit process throughput and total process throughput for EQUIs 127, 128, and 129 for each test run. TREA 27 Operation of the Continuous	COMG 12: Control Efficiency for PM/ PM_{10}/$PM_{2.5}$ ≥ 86.6 percent control efficiency TREA 27: CPMS operating and recording properly TREA 64: Stage 1 Filter Pressure Drop ≥ 0.0001 and ≤ 0.600 kilopascal

Subject Item	Stack Description (Associated Emission Units)	Short-Term Throughput Limits with Target Rates, Process Parameters and Special Considerations for Test Plans.	Throughput Limits and Control Equipment Parameters to monitor during testing	Control Equipment Operating Parameters
			Parameter Monitoring System (CPMS) TREA 64 Pressure Drop	Stage 2 Filter Pressure Drop $\geq$ 0.0001 and $\leq$ 0.800 kilopascal
STRU 74	Smog Hog #5 Stack (EQUIs 130 and 131)	Process Throughput $\leq$ 839.0 pounds per hour	Track individual unit process throughput and total process throughput for EQUIs 130 and 131 for each test run. TREA 78 Operation of the Continuous Parameter Monitoring System (CPMS) TREA 65 Pressure Drop	COMG 12: Control Efficiency for PM/ PM_{10}/$PM_{2.5}$ $\geq$ 86.6 percent control efficiency TREA 78: CPMS operating and recording properly TREA 65: Stage 1 Filter Pressure Drop $\geq$ 0.0001 and $\leq$ 0.600 kilopascal Stage 2 Filter Pressure Drop $\geq$ 0.0001 and $\leq$ 0.800 kilopascal
STRU 20	Smog Hog #6 Stack (EQUIs 132 and 133)	Process Throughput $\leq$ 1015 pounds per hour	Track individual unit process throughput and total process throughput for EQUIs 132 and 133 for each test run. TREA 30 Operation of the Continuous Parameter Monitoring System (CPMS) TREA 66 Pressure Drop	COMG 12: Control Efficiency for PM/ PM_{10}/$PM_{2.5}$ $\geq$ 86.6 percent control efficiency TREA 30: CPMS operating and recording properly TREA 66: Stage 1 Filter Pressure Drop $\geq$ 0.0001 and $\leq$ 0.600 kilopascal Stage 2 Filter Pressure Drop $\geq$ 0.0001 and $\leq$ 0.800 kilopascal
STRU 75	Smog Hog #8 Stack (EQUI 134 and 135)	Process Throughput $\leq$ 1347 pounds per hour	Track process throughput at EQUI 134 for each test run. Table of Contents

1.0 Program Overview

Water Gremlin is a manufacturer of fabricated lead metal products from purchased refined lead material. Battery terminal posts are the primary product, and account for majority of production at the facility. Water Gremlin consists of an existing manufacturing facility at 4400 Otter Lake Road in White Bear Township, MN. Water Gremlin manufacturing operations are currently permitted under State Only Air Emission Permit No. 12300341-003 issued by the Minnesota Pollution Control Agency (MPCA). Uncontrolled emissions from the facility are above the major source thresholds for the Part 70 permit program for Volatile Organic Compounds (VOC) and Hazardous Air Pollutants (HAP), therefore the facility has taken limits on VOCs and Trichloroethylene (TCE) to be a synthetic minor source under the Part 70 program and to retain its State Permit status.

This air permit application is for a major air permit amendment. Water Gremlin is currently operating under Air Quality Permit No. 12300341-003, which was issued on September 22, 2006.

Based on conversations with the MPCA, TCE emissions were identified as a potential health risk based on recent air dispersion modeling screened against the Minnesota Department of Health (MDH) Risk Assessment Advice (RAA) of 2 µg/m^3. Water Gremlin is proposing to utilize a new solvent primarily containing trans-1,2-dichloroethylene (TDCE). MDH has developed site-specific RAA for TDCE with a chronic long-term threshold of 70 µg/m^3. TDCE toxicity and potential health risk is considerably less when compared with TCE. Water Gremlin is proposing to conduct TCDE sampling to provide confirmatory data to support the assertion that TDCE emissions from the facility would not pose unacceptable risk to human health. Water Gremlin proposes conducting periodic sampling around the facility to collect data in order to characterize ambient air concentrations of TDCE at the site.

Under this Ambient Air Monitoring Plan (AAMP), Water Gremlin will complete a run of sampling events in early 2019 to evaluate ambient concentrations of TDCE. Other VOCs from US EPA's Compendium Method TO-15 (TO-15) will be analyzed along with TDCE. However, TDCE is the only VOC from the facility anticipated to be potentially observed in ambient air. Other TO-15 VOCs could be anticipated in ambient air from background and other nearby VOC sources as well as mobile sources (motor vehicles) given the proximity of roadways to the proposed monitors. Water Gremlin will use the data gathered under this monitoring to evaluate an approach moving forward.

This AAMP was designed in general accordance with United States Environmental Protection Agency (EPA), *Air/Superfund National Technical Guidance Series, Volume IV – Guidance for Ambient Air Monitoring at Superfund Sites (Revised)*, EPA-451/R-93-007, 1993, and MPCA's Exhibit M.

This AAMP identifies:

- Target compound(s) (TDCE and other TO-15 VOCs)
- Number and locations of the monitoring stations,
- Duration and frequency of monitoring,
- Sampling and analytical methods,
- Associated detection limits (DLs),

WENCK

- Quality Assurance/Quality Control Plan (QA/QC), and
- Data management and reporting system.

In addition to the methodologies, the AAMP provides additional detail regarding Standard Operating Procedures (SOPs) and Quality Control systems.

The goal of the AAMP is to assess air concentrations of TDCE in order to demonstrate the TDCE emissions from the facility do not pose unacceptable risk to the human health and to evaluate potential future compliance demonstration approaches.

2.0 Target Chemical

The target chemical for this AAMP:

- Trans-1,2-dichloroethylene (TDCE)
- Other TO-15 VOCs

The basis for establishing target chemical list is:

- Request from MPCA to evaluate potential TDCE emissions from the site to ensure no unacceptable risk to human health.

3.0 Monitoring Stations

The overall strategy for assessing impacts from potential TDCE emissions at Water Gremlin is to monitor ambient air around the facility taking in account historic wind patterns, preliminary air dispersion modeling results, and location of nearby residents. Monitoring stations are proposed at five locations around the facility. Based on meteorological data from the nearby Crystal Airport from 2012-2016, prevailing winds are from either the northwest or the southeast. A wind rose downloaded from MPCA's website is included in Appendix A. Based on these prevailing wind directions, maximum predicted concentrations would be expected to southeast and northwest. Therefore, a monitoring location is proposed downwind of the emission unit near the southern property line of the adjacent property also owned by Water Gremlin. Monitoring location 1 to the south and southeast (ML1-S) is placed to measure potential facility-impacted (downwind) ambient air as both the closest location to the point source along the southern property line and in the downwind direction of nearby residents. This southern location also correlates with the strong wind pattern from the northwest discussed above. A second monitoring location (ML2-NW) is proposed near the property line in the northwest section of the facility to measure ambient air near residents as well as to capture the other prevailing wind direction from the southeast and is supported by preliminary air dispersion modeling performed by Wenck (see Appendix A figures). A third monitoring location on the east side of the facility (ML3-E) is proposed near the closest resident to the northeast of the facility point source and at the closest location to the point source along the eastern property line. A fourth monitoring location is proposed near the west (ML4-W) facility entrance to characterize ambient air in the direction of the residents in that direction. Lastly, a fifth monitoring location is proposed along the property line directly north (ML5-N) of the facility to characterize ambient air in the direction of the residents in that direction and is located where maximum concentrations are predicted by the preliminary air dispersion modeling. The monitoring locations are illustrated in Figure 1.

For non-criteria pollutants, MPCA's Exhibit M requires siting to meet requirements prescribed in the approved method for the target parameter. However, the approved method (Compendium Method TO-15) does not prescribe siting requirements. Below is an outline of the 40 CFR 58, Appendix E requirements for criteria pollutants that were taken into consideration for the siting of monitors when possible.

- >1 meter (m) vertically or horizontally away from any supporting structures or dusty/dirty areas
- Avoid placement near local or minor sources of target compounds, including other sample machines
- Paved area or year-round vegetative ground cover
- 15 m>h>2 m inlet height above ground level- *Inlets will be 4-5 ft (~1.2-1.5m) from ground level*
- >10 m from tree drip line- *Due to heavy tree coverage, distances for some monitoring locations are less in some cases*
- >10 m from roads with vehicle traffic up to 10,000 vehicles per day
- Unobstructed airflow in all directions; distance from obstacles to the probe, inlet, or monitoring path is at least twice the height that the obstacle protrudes above the probe, inlet, or monitoring path.

Exhibit M forms for each proposed monitoring location are included as Appendix B. A site visit to confirm and approve monitor siting will be conducted to verify EPA siting guidelines are followed as much as possible.

4.0 Sampling and Analytical Methods

The sampling methods selected are based on published, approved US EPA ambient air sampling methods and available sampling technology that is consistent with the objectives of this AAMP.

4.1 SAMPLING IDENTIFICATION

Each collected sample is labeled with an identification number. The sample identification always consists of three components which will be separated by a hyphen. The components that are used to create the unique identification for the sample are as follows:

- Date of the sample collection time period recorded as YYMMDD for 24-hour samples. A sample collected from 10:30am January 29, 2019 through 10:30 am on January 30, 2019 is recorded as 190129.
- Station number where the sample location is collected. A sample collected at the Monitoring Location 1-South is recorded as ML1S.
- US EPA TO-15 method is recorded as TO15.

After the elements of the collected sample have been identified, the sampling technician assembles the sample identification components described above to create the Sample ID for each respective sample. An example of the Sample ID is as follows:

- A sample collected on February 8, 2019 at Monitoring Location 1-South by TO-15 would be identified as Sample ID 190208-ML1S-TO15.

4.2 SAMPLING FREQUENCY

Water Gremlin proposes to sample ambient air for a 24-hour period coinciding with EPA's 3-day schedule with the exception that the sampling will commence mid-morning to mid-morning as opposed to midnight to midnight sampling. This is to accommodate the need for staff to be on-site to initiate sampling and in consideration of safety. Additionally, the proposed locations may not have power readily available to accommodate installing automatic samplers. In order to accommodate travel time between sampling locations, samples will be collected on a slightly staggered schedule.

Samples will be collected over a 24-hour time period and will capture ambient air during manufacturing, including start-up. The sampling will also capture the various daily operating day shifts throughout the day which are as follows:

- 1st – 6:15 – 2:45 pm
- 2nd – 2:15 – 10:45 pm
- 3rd – 10:15 – 6:45 am

The 2019 EPA sampling schedule is included in Appendix C.

4.3 SAMPLING AND ANALYTICAL METHODS

US EPA's Compendium Method TO-15 is the sampling and analytical method to be utilized for this AAMP. A Canister Sampling SOP is included in Appendix D. Laboratory SOPs from Pace Analytical are included in Appendix E.

Chemical Group	Sampling & Analytical Method	Target Detection Limit[1]
TDCE	US EPA's Compendium Method TO-15	MDL 0.29 to RL 0.81 µg/m³

(1) Method Detection Limits (MDLs) and Reporting Limits (RLs) may vary based on factors such as dilution. The detection limit will be whatever is technically capable in accordance with the US EPA approved analytical methods provided by the laboratory. The "examples" shown in the table above represent the general order of magnitude of the detection limits.

4.3.1 TDCE

Water Gremlin will collect TDCE samples in electropolished 6 Liter stainless steel Summa canisters with 24-hour flow controller. The instrumentation and sampling procedures are described in US EPA's Compendium Method TO-15. The TO-15 VOC analysis is performed using Gas Chromatography (GC) with detection limits ranging from 1 to 200 micrograms per cubic meter (µg/m³). Method TO-15 includes specifications for 1) preparation, cleaning, and certification of sampling equipment, 2) sample preservation, transport, and storage, and 3) sample holding times prior to analysis.

Each canister will be individually certified as clean according the Pace Analytical Lab SOP included in Appendix E, so field/travel blanks are not anticipated to be necessary for this sampling.

4.3.2 Other TO-15 VOCs

Other TO-15 VOCs will be analyzed in collected samples as described above. TDCE is the only VOC from the facility anticipated to be potentially observed in ambient air. Other VOCs could be anticipated in ambient air from background and other nearby VOC sources as well as mobile sources (motor vehicles) given the proximity of roadways to the proposed monitors.

The reporting limits and detection limits for the entire TO-15 analyte panel for Pace Analytical Lab is also included in Appendix E.

4.3.3 Meteorological Data

Meteorological data including hourly wind speed, wind direction, and precipitation will be collected from nearby Crystal Airport. Wind rose plots will be created from the meteorological data for each of the 24-hour sampling events.

4.4 DEVIATIONS

Specific deviations noted for documentation are listed below:

- Sample times will be staggered and driven by business hours to accommodate the need for on-site sampling initiation. The sample times are intended to capture a full, continuous day inside the total twenty-four-hour sampling period but vary

from the traditional EPA midnight to midnight (0000 to 0000) schedule. Because this is a site-specific plan, comparison to EPA sampling is not required.

5.0 Data Management

The AAMP goal is to provide accurate, defensible data to determine if TDCE emissions from Water Gremlin result in unacceptable risks to human health. The data must meet the Quality Assurance Project Plan (QAPP) criteria for accuracy, precision, completeness, and representativeness. The QAPP for this AAMP is included as Appendix F.

5.1 DOCUMENTATION AND RECORDING

The following information is collected and maintained to document the sampling and analytical results:

- Meteorological conditions from nearby Crystal Airport will be reviewed
- Sampling variables (times, flow rates, volumes collected, etc.);
- Upset conditions (releases at the facility, unusual meteorological events, fires, or any other event that may cause an impact to the ambient air);
- Calibration or maintenance procedures;
- Copies of chain-of-custody forms; and
- Analytical data from the laboratories.

5.2 DATA REDUCTION

The laboratory will provide Water Gremlin and MPCA with analytical results. The results will be compiled into a spreadsheet this is unlocked and editable and provided to MPCA. Analytical results will be submitted to MPCA with 48 hours of lab receipt until six consecutive, valid sampling events have occurred. After six consecutive, valid sampling events, analytical results will be submitted to MPCA with 14 calendar days of the sampling event.

5.3 DATA VALIDATION

Data validation is the systematic review of measurement data for outlier identification and error detection. For the purpose of this AAMP, Level I-III validation levels are defined as follows:

Level I validation includes reviewing chain-of-custody forms to detect problems such as canister leakage that may have contributed to nonstandard sampling intervals, insufficient sampling volume, or other problems. Level I validation is performed by Water Gremlin and their consultants who assist with management and implementation of the AAMP.

Level II validation verifies compound identities and if analytical systems are operating within acceptance criteria and identifies anomalies. Level II validation is performed by the laboratories.

Level III validation screens data for outliers, evaluates results inconsistent with other collected data and prevailing wind directions, and evaluates results considering special conditions (such as a field fire or an agricultural related dust plume during the sampling event). Data screening can include:

- Routine checks and procedures,
- Check for internal data consistency, and
- Check for consistency with data collected at the same time, under similar conditions.

Level III validation is not anticipated for this AAMP based on the temporary nature of the sampling.

5.4 DATA REPORTING

MPCA will receive data directly from the laboratory. Additionally, Water Gremlin will evaluate the collected data against the SOPs, standards, and QAPP. Data to be documented and reported include:

- 24-hour average concentration,
- Meteorological data from nearby Crystal Airport,
- Detected concentrations by station and monitoring period,
- Number of collected samples,
- Detection limits
- Exceedances of QAPP criteria, if applicable, and
- Quality Control sample results including method blanks, and lab control spikes/duplicates.

The reports may also provide a narrative discussion and summary of the data set and data quality. Surrogate recoveries are not required by TO-15 and if acceptable, will not be reported. If required, surrogate recoveries can be reported once the laboratory gets a system in place. Calibration verifications and chromatography are raw data that requires a full level 4 data package. Chromatography (and, if acceptable, calibration verifications) will be provided by laboratory upon request from MPCA.

Exhibit M Forms

Revision 6/20/2017

Ambient Air Monitoring Site Information Form (page 1 of 2)

Site ID #: ML1-S New X Change ____

Date established: February 2019

Date terminated: To be determined

Supporting agency: Wenck (in collaboration with Pace Analytical Services, Inc.)

Street address: 1802 Wooddale Drive

City: Woodbury State: MN Zip code: 55125

Site name: Water Gremlin

Site address: 4400 Otter Lake Road

City: White Bear Twsp. State: MN Zip code: 55110 County: Ramsey

Geographical coordinates: fill in either UTM coordinates OR Latitude / Longitude

UTM Coordinates:

Zone: 15 North: 4990974.95 East: 497600.97

Longitude and Latitude:

Latitude: _____ Longitude: _____

Geographical coordinate measurement information:

Method of determination: Google Earth

Estimate of accuracy: Approximately +/- 2m Datum: NAD 83

Elevation (mean sea level)

Elevation: 279.98 Estimate of accuracy: Approximately +/- 2m

Method of determination: Google Earth

Land Use (check one)

Residential X Commercial ____ Industrial ____ Agricultural ____

Forest ____ Desert ____ Mobile ____ Blighted areas ____

Location Setting (check one)

Rural ____ Suburban X Urban & City center ____

Appendix D

Canister Sampling Standard Operating Procedure

Canister Sampling Standard Operating Procedure

The following sampling procedures and worksheet are developed from U.S. EPA's Compendium Method TO-15.

PROCEDURE

Subatmospheric Pressure Sampling

1. Prior to sample collection, the appropriate information is completed on the canister sampling field test data sheet (FTDS). A sample FTDS from the TO-15 method is attached along with a FTDS prepared by Pace Analytical Lab for this project. If acceptable, the Pace Analytical FTDS will be utilized for this project.
2. In preparation for sample collection, the canister is evacuated to < 0.2 millimeters of mercury (mmHg) (<200 mTorr). When the canister is opened to the atmosphere containing the VOCs to be sampled, the differential pressure causes the sample to flow into the canister. This technique will be used to collect time-weighted-average (TWA) samples (duration of 24 hours) taken through a flow-restrictive inlet (mass flow controller). The pressure differential causes the sample to flow into the canister.
3. With a mass flow controller, the subatmospheric sampling system can maintain a constant flow rate from full vacuum to within about 7 kPa (1.0 psi) or less below ambient pressure.
4. Prior to field use, each sampling system must pass a humid nitrogen. All plumbing should be checked carefully for leaks. The canisters must also pass a humid nitrogen certification before use.
5. The sample canister should be cleaned and tested according to the Pace Analytical Lab SOP included in Appendix E. Each individual canister flow controller is calibrated (3.8 ml/min for 24 hr controllers) and logged following these procedures.
6. The canister is placed at the desired location and the sample valve is opened to indicate the sampling. Initial Pressure/vacuum in the canister is recorded on the canister FTDS as indicated by the sampler vacuum/pressure gauge.
7. At the end of the sampling period, the sample valve is closed, and the final vacuum/pressure is recorded on the FTDS. Pressure should be close to desired pressure.
   [Note: For a subatmospheric sampling system, if the canister is at atmospheric pressure when the field final pressure check is performed, the sampling period may be suspect. This information should be noted on the sampling field data sheet.]
   Time of day is also recorded.
8. Upon sample completion at the location, the appropriate information is recorded on the FTDS.
9. An identification tag is attached to the canister. Canister serial number, sample number, location, and date, as a minimum, are recorded on the tag. The canisters will be routed directly back to the analytical laboratory.

Table of Contents

1.0 Project Description

The Ambient Air Monitoring Plan (AAMP) is designed to assess facility potential air emissions of TDCE in order to evaluate assumptions for assessing health risk. Other VOCs from US EPA's Compendium Method TO-15 (TO-15) will be analyzed along with TDCE. However, TDCE is the only VOC from the facility anticipated to be potentially observed in ambient air. Other VOCs could be anticipated in ambient air from background and other nearby VOC sources as well as mobile sources (motor vehicles) given the proximity of roadways to the proposed monitors.

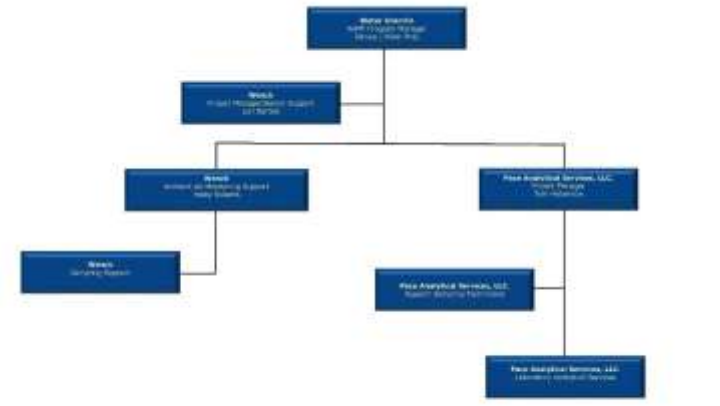
Quality Assurance (QA) refers to the system of activities to ensure that the data quality is sufficient to achieve the project goal. These activities include quality planning, personnel training, standardization of procedures, documentation, data validation, and data quality evaluations (audits). Quality Control (QC) refers to operational techniques such as instrument checks, and flow rate checks calibration checks, and field blanks if appropriate.

The Pace Analytical standard operating procedures (SOPs) will be adhered to as it pertains to calibrations and QC limit requirements.

The purpose of the Quality Assurance Project Plan (QAPP) is to specify the procedures to ensure that the data accuracy, precision, completeness, and representativeness are known, documented, and are sufficient to achieve the project goal.

The QAPP objectives are to ensure that the monitoring data is: 1) technically sound and defensible, and 2) is of sufficient quality to achieve the project goal.

2.0 Organizational Chart of Responsibility



NOTE: Specific names subject to change.

3.0 Data Quality Objectives

Environmental measurements have inherent limitations arising from equipment problems, procedural deviations, and changes in ambient conditions. Most environmental measurements are analyses made for extremely low concentrations of constituents and are subject to chemical interferences, instrument limitations, and uncertainties that affect the accuracy of the determination. It is essential to minimize these variable factors so that the measurements accurately reflect the character of the sample collected. All data gathered during the course of the AAMP, or processed by the laboratory, will meet objectives of accuracy, precision, completeness, representativeness, and comparability. These characteristics are defined as follows:

Accuracy – the closeness of agreement between an observed value and an accepted reference value. The difference between the observed value and the reference value includes components of both systematic error (bias) and random error. Laboratories assess the overall accuracy of their instruments and analytical methods (independent of sample or matrix effects) through the measurement of "standards", materials of accepted reference value. Accuracy will vary from analysis to analysis because of individual sample and matrix effects. In an individual analysis, accuracy can be measured and expressed in terms of the recovery of surrogate compounds (organic analyses). This gives an indication of expected recovery for analytes tending to behave chemically like the spiked or surrogate compounds.

Precision – the agreement among a set of replicate measurements without consideration of the "true" or accurate value, that is, variability between measurements of the same material for the same analyte. Precision is measured in a variety of ways, including statistically, such as calculating variance or standard deviation. For quality control purposes, 5% of the collected samples will be used as laboratory duplicates. The Pace Analytical standard operating procedures (SOPs) will be adhered to as it pertains to calibrations and QC limit requirements.

Completeness – a measure of the amount of valid data obtained from a measurement system compared to the amount that was expected to be obtained under correct normal conditions.

Representativeness – a qualitative parameter that expresses the degree to which the data accurately and precisely represent a characteristic of a population, parameter variations at a sampling point, process condition, or an environmental condition. Representativeness is a qualitative parameter that is dependent upon the proper design of the sampling program and the laboratory QC protocol.

Comparability – a qualitative parameter that expresses the confidence with which one data set can be compared to another.

4.0 Site Selection/Sample Procedures

A summary of the strategy used in determining the number and locations of the sampling stations is included in Section 3 of the AAMP. The site locations are shown on the Figure 1 site layout.

Detailed sampling procedures have been developed for the ambient air sampling being utilized in this project. These detailed SOPs include specific information on the EPA-approved method being used and specific quality assurance, procedures, calibration, sample custody, and quality control.

5.0 Sample Custody

All field and laboratory personnel will follow the sample custody procedures specified by applicable SOPs located in Appendices D and E of the AAMP as well as EPA Compendium Method TO-15. Immediately after removing samples from the field, chain-of-custody form, will be completed and accompany the collected samples until received by the lab. Collected samples will be taken by field staff directly to the laboratory for analysis.

5.1 TEMPERATURE PRESERVATION REQUIREMENTS

The temperature requirements of the samples are shown below. Excessive heat must be avoided (e.g., do not leave in direct sunlight).

Item	Temperature Requirement	Reference
VOC canister pre- and post-sampling	No requirements	US EPA Compendium Method TO-15

5.2 PERMISSIBLE HOLDING TIMES

The permissible holding times for the sample are detailed in the attached methods. These holding times are provided in the following table:

Item	Holding Time	From:	To:	Reference
VOC canister	Less than 30 days	Completion of sample period	Time of analysis	Method TO-15

6.0 Calibrations and Frequency

Calibration procedures for the flow controllers are outlined in the Lab SOP included in Appendix E of the AAMP. All calibration activities will be documented.

7.0 Analytical Procedures

Pace Analytical Services, LLC. (Pace) will be performing the analytical laboratory services for EPA Compendium Methods TO-15. Pace has an extensive National Environmental Laboratory Accreditation Program (NELAP) Quality Assurance program to guarantee the highest quality data. TDCE for Method TO-15 will be analyzed by Gas Chromatography/Mass Spectrometry (GC/MS).

Contact information for Pace is below:

Pace Analytical Services, LLC.
1700 Elm Street SE
Minneapolis, MN 55414
Contact: Thomas Halverson
612-607-6398
tom.halverson@pacelabs.com

8.0 Data Reduction, Validation, Reporting

Data reduction and reporting are discussed in Section 5 of AAMP.

9.0 Internal Quality Control (QC)

Laboratory personnel will conduct sampling QC checks such as flow rate checks, leak checks, timer checks, and visual inspection of sampling canisters. Sampling QC checks will be conducted before and after each sampling period. All sampling QC check activities will be documented. Additional control limits and corrective actions for sampling QC checks are described in the specific step-by-step SOP included in Appendices D and E of AAMP.

The laboratory will conduct and document analytical QC checks (such as system blanks and spiked samples) specified by applicable sampling methods (Method TO-15). Pace Analytical Lab with follow the analytical TO-15 SOP for the recommended frequency and criteria of routine quality control checks

Each canister will be individually certified as clean in accordance with the Lab SOP included in Appendix E of the AAMP, so field/travel blanks are not anticipated to be necessary for this sampling.

10.0 Performance System Audits

Performance and system audits will not be conducted under this plan at this time based on the short duration of the program.

11.0 Corrective Actions

Corrective action is the process of identifying, recommending, approving, and implementing measures to counter unacceptable procedures or out-of-range QC performances that may affect data quality. Corrective action can occur during field activities, laboratory analyses, data validation, and data assessment. This discussion of corrective actions is limited to field activities. Analytical methods have their own set of corrective action criteria and will not be discussed here.

Deviations from sampling procedures that may require corrective action include failed calibration checks, incorrect operation of equipment, and sampling procedures not followed correctly.

Corrective actions for many of these deviations will simply be repair and recalibration of the equipment. However, deviations from sampling procedures that may potentially impact samples must be reported to both the Program Managers and the Project Manager, identified in Section 2.0 of this QAPP. Based on the impact and samples affected, a determination will be made on whether the data can be qualified. If the data is accepted, it will be flagged appropriately.

12.0 Reporting

Specific recordkeeping requirements are discussed in Section 5 of the AAMP.

Appendix G. General public preclusion plan

Introduction

In evaluating compliance with the National Ambient Air Quality Standards (NAAQS), ambient air is considered to be areas in which the general public has access. On December 2, 2019, EPA issued a memo stating that areas controlled by the facility where measures effectively preclude general public access are not considered ambient air. This General Public Preclusion Plan documents the measures to be taken by Water Gremlin
Company (Water Gremlin) at their White Bear Lake facility to preclude the general public from entering the property.

Facility Setting

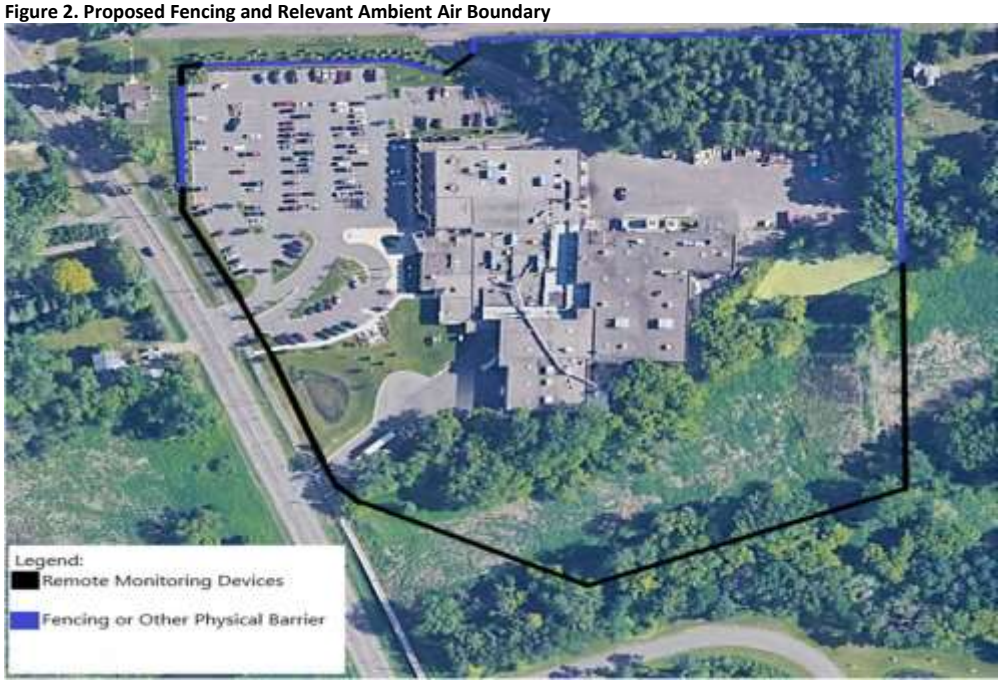
Water Gremlin is located in a suburban area of the Twin Cities, within the boundaries of White Bear Township. The facility encompasses approximately 60 acres of land. Water Gremlin conducts its operations in two complexes on the property, one set of adjoining structures comprising the North Building, and a single South Building. The ambient air boundary for the air dispersion modeling analysis at the Water Gremlin facility was placed along the property line on the northern border surrounding the North Building. Figure 1 shows the entire existing property boundary (yellow) and the general extent of the proposed ambient area boundary (red). There is no fence surrounding the entire property boundary; however, physical geographical barriers (e.g., creek, marsh, wet ground) prevent general public access to the site. Receptors were placed surrounding the South Building and outside the ambient air boundary. The South Building is intended to remain unfenced.

Figure 1. Existing Property Boundary and Proposed Ambient Air Boundary

Proposed Preclusion Measures

The North Building is located near the northwestern property corner, with entrances to the facility located to the west and north sides of the building. A fence also exists surrounding the northern boundary of the North Building parking lot. Part of the facility is surrounded by a marsh, creek, and heavily wooded area. These areas act as physical barriers precluding the public from accessing the facility. However, Water Gremlin is utilizing fencing or other equivalent physical barriers in addition to those existing physical barriers to further preclude the public from gaining access. Remote monitoring devices (cameras, drones, etc.) will be used to monitor the entrances, parking lots, and wetland areas. Figure 2 describes the proposed preclusion measures for the facility.

Figure 2. Proposed Fencing and Relevant Ambient Air Boundary



Water Gremlin will be adding No Trespassing signs every 500 feet around the property line and will install or operate remote monitoring devices (cameras, drones, etc.) for both entrances at the North Building. The combination of the physical geographical features, existing fencing, added signage discouraging trespassing, and monitoring devices will effectively restrict the general public from accessing the facility property boundary and thus protect public health.

General Public Preclusion Plan

The General Public Preclusion Plan includes multiple deterrents to preclude the general public from accessing the facility. These include:

1) Fencing: Water Gremlin will install fencing or other equivalent physical barriers surrounding the North Building as shown in Figure 2.

2) Topography: There are areas on the site with natural topography that make it difficult for the general public to reach the north building. There is a heavily wooded area to the northeast and a marsh, creek, and wetland areas to the east. A small creek runs through the Water Gremlin property between the two building complexes. These natural barriers will be supplemented with fencing where feasible.

3) No Trespassing Signs: Water Gremlin will install No Trespassing signs that include the company name and contact information every 500 feet along the property boundary. A sign will also be posted at both entrances (Otter Lake Road and Whitaker Street) indicating the property boundary and restricted entry to employees and authorized visitors.

4) Remote Monitoring Devices: Water Gremlin will install or operate (and maintain) remote monitoring equipment to maintain the effective boundary as shown in Figure 2. Cameras are being considered currently but Water Gremlin could elect to use other forms of remote monitoring (e.g. drones, etc.) as new technology is developed. Multiple cameras monitor the area during operations. Malfunctions will be observed and addressed daily during the monitoring. Remote monitor operation and maintenance will follow the manufacturer's recommendations. When remote monitoring devices are offline, security patrols will be increased until remote monitoring devices are operable.

5) Public Preclusion Breaches: The protocol for addressing a public breach on site will be added to the annual environmental training for all relevant Water Gremlin personnel. In the event of a breach, personnel will respond to the scene and escort the trespasser off-site or contact local law enforcement. Upon successful mitigation of any breach incident, Water Gremlin personnel will document the incident. Any actions to prevent future breaches such as repairing of fence, addition of signage or other appropriate Best Management Practices (BMPs) will be taken, if necessary. The breach report and any supplementary documentation will be included in the electronic records files maintained for the facility.

Appendix H. Minimum requirements for a revised VOC and TO-15 ambient monitoring

Network design for criteria and non-criteria pollutants

All air monitoring networks intending to demonstrate attainment with State and Federal ambient air quality standards must comply with the requirements in the Code of Federal Regulations Title 40, Part 58 (40 CFR Part 58).

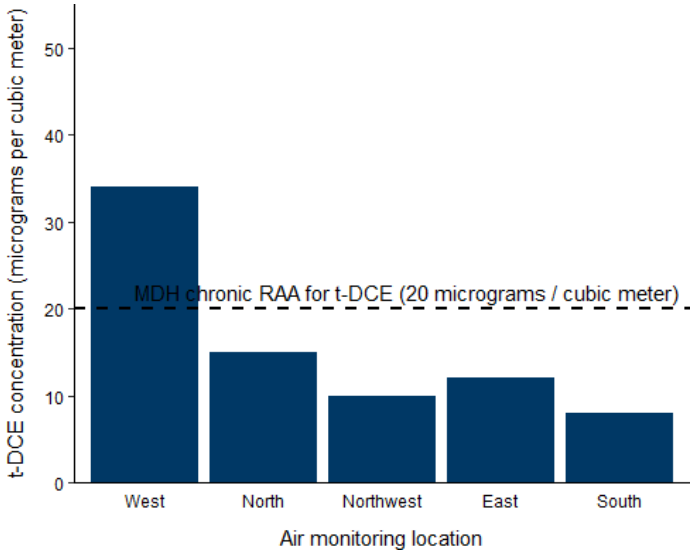
Location, number of monitors, parameters, and duration of the monitoring shall be determined through development of an air monitoring process (see *Development of an air quality monitor siting plan for determination of compliance, aq1-65* found on the MPCA website at https://www.pca.state.mn.us/sites/default/files/aq1-65.pdf).

Number and locations of monitoring sites

1. Maintain the 2 monitors located at the West and North sites.
2. Meet EPA siting requirements
    a. Permanent site
    b. Mass flow controller
    c. Install platforms
    d. Improve monitoring site security

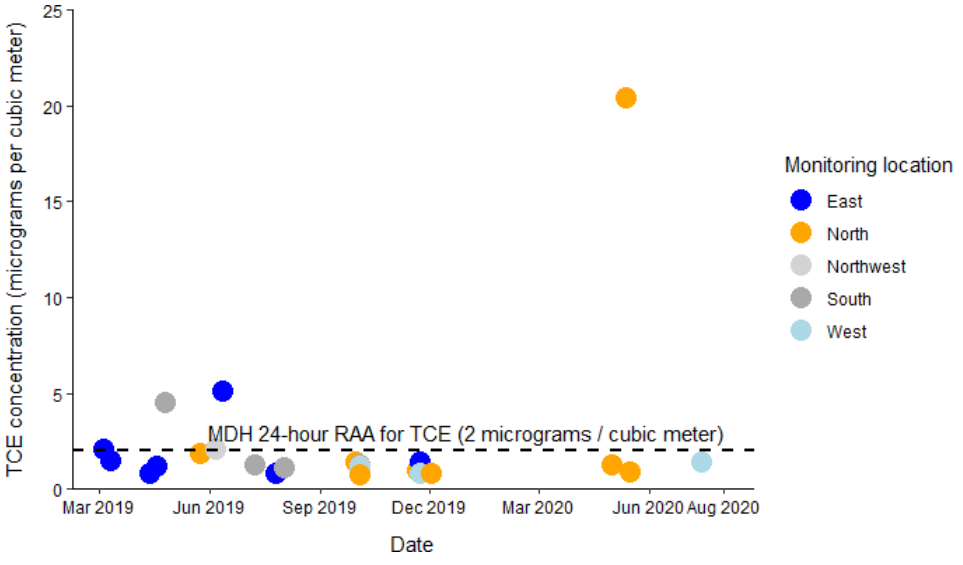
Monitoring results consistently show the West and North monitoring sites measuring the highest t-DCE and TCE concentrations on average (Figures 1 and 2). These two sites provide a "worst-case scenario" of ambient air t-DCE and TCE concentrations surrounding the facility. EAO recommends maintaining the West and North sites and discontinuing the other VOC monitoring sites since we would expect the t-DCE and TCE concentrations at the other sites to be no higher on average than t-DCE and TCE concentrations measured at the West and North sites. EAO recommends the facility make improvements to those monitoring sites including installing platforms for the VOC samplers and improving monitoring site security to meet EPA siting requirements pursuant to 40 CFR Part 58. EAO recommends that the facility also measure wind directions and velocities on their property to better identify potential offsite sources of VOCs measured at the air monitoring sites, but this is not required to be included as part of the monitoring plan.

Figure 1: Average t-DCE concentrations at Water Gremlin monitoring sites 3/1/2019 to 8/1/2020



Commented [A501]: The MDH RAA for t-DCE was 70 ug/m3 for most of this monitoring period. The dashed line is misleading. Additionally, the more appropriate value for inhalation as published by EPA in 2020 is 40 ug/m3, not 20 ug/m3, which is based on an ingestion study.

Figure 2: Detected TCE sample results at Water Gremlin air monitoring sites 3/1/2019 to 8/1/2020



Commented [A502]: Water Gremlin discontinued TCE use in early 2019 and provided a report discussing the TCE detections in ambient air. Water Gremlin was not the cause of the TCE detections in air.

Sampling frequency

1. Once every six days

Average ambient air concentrations measured around the facility once every six days are about the same as average concentrations measured once every three days and the facility's t-DCE throughput and emissions do not vary greatly on a day-to-day basis. Therefore, EAO recommends reducing the sampling frequency from once every three days to once every six days. Reducing the sampling frequency to once every six days would make the facility's sampling schedule consistent with MPCA's VOC air sampling schedule without compromising the representativeness of the measurements.

Data submittal frequency

1. Submit all monthly TO-15 results to MPCA within 30 days after the last day of the month.

Since t-DCE is a pollutant with potential risks primarily associated with long-term exposure, it is generally not necessary to receive monitoring results within days. It is more important to focus on long-term average concentrations and trends instead of day-to-day monitoring results, so monthly results submissions would suffice for evaluating potential health risks associated with t-DCE exposure and notifying the community of any potential health risks in an appropriate amount of time. Therefore, EAO recommends that the facility submit all TO-15 results to MPCA on a monthly basis, with results for a calendar month being submitted to MPCA within 30 days after the last day of the month. This would reduce the frequency which new information is reported to the public, but all monitoring results will still be made publicly available as needed.

Monitoring plan

1. MPCA Environmental Data Quality Unit may annually review and request amendments

EAO recommends that the facility include all of the information above including monitoring locations, sampling frequency and duration, data submittal process, and a quality assurance project plan (QAPP) in their air monitoring plan. The monitoring plan is not valid until approved by the MPCA Environmental Data Quality Unit. Once the monitoring plan is approved, the facility is expected to operate an air monitoring network and submit results to MPCA in accordance with the monitoring plan. The monitoring plan may be reviewed annually by the MPCA Environmental Data Quality Unit and MPCA may request amendments to the air monitoring plan after review.

MPCA VOC sites

1. MPCA VOC monitoring sites may be removed.

MPCA independently operates the Birch Lake and Columbia Park VOC monitoring sites in response to community concerns about VOC exposure for vulnerable populations. These sites are not part of any permit condition or stipulation agreement and are only for informational purposes. These sites have consistently monitored very low levels of t-DCE and TCE well below levels of health concern and EAO recommends they be discontinued to free up air monitoring resources for other locations of greater concern.

Lead

1. MPCA lead monitoring sites may be removed

The facility may demonstrate compliance with the lead NAAQS through either air dispersion modeling or ambient air monitoring described in the MPCA's industrial monitoring process. MPCA is independently operating two lead

monitoring sites near the facility in response to community concerns about exposure to lead. These sites are not intended to demonstrate the facility's compliance with the lead NAAQS. Concentrations measured at both sites have been well below the lead NAAQS; however, for the facility to demonstrate future compliance with the lead NAAQS, the facility should demonstrate compliance through air dispersion modeling or by operating its own lead air monitoring network according to an MPCA approved air monitoring plan. If the facility demonstrates compliance with the lead NAAQS via air modeling, then the facility does not need to conduct lead air monitoring. If the facility does not demonstrate compliance with the lead NAAQS via air modeling, then EAO recommends the facility operate its own lead monitoring network in accordance with an MPCA approved air monitoring plan (the lead air monitoring plan would be part of the same document as the VOC air monitoring plan). Once the facility demonstrates compliance with the lead NAAQS through either modeling or monitoring, the MPCA lead monitoring sites will be redundant and EAO recommend they be discontinued.

General Guidance on Ambient Air Monitoring for Permittees (aq2-34, 12/1/20)

MINNESOTA POLLUTION CONTROL AGENCY
520 Lafayette Road North
St. Paul, MN 55155-4194

Ambient air monitoring
for Permittees

Doc Type: Ambient Monitoring - QA/QC

Instructions: This exhibit shall apply to all emission facilities that are required to perform ambient air monitoring in order to demonstrate compliance of State and Federal ambient air quality standards or permit conditions, unless otherwise stated by special conditions of the permit.

Probe and siting criteria

Probe siting and placement for criteria pollutants should comply with specifications described in Appendix E to 40 CFR Part 58. Each monitoring site must have a site and monitor information form completed prior to submission of data (see attached Appendix A).

Probe siting for non-criteria pollutants must meet requirements prescribed in the approved method for the target parameter.

Monitoring methods

All criteria pollutants must be measured by U.S. Environmental Protection Agency (EPA) reference or equivalent methods, approved in accordance to Appendix C to 40 CFR Part 58.

A list of "Designated Reference and Equivalent Methods" and "Acceptable Methods for Non criteria Pollutants" may be obtained on the EPA's Ambient Air Monitoring Technology Information Center (AMTIC) website located at https://www.epa.gov/amtic.

The Minnesota Pollution Control Agency (MPCA) must be informed of any method change performed during the monitoring project. The method change must be reported within 45 working days from the end the reporting quarter in which the change took place.

Non criteria pollutants must be measured by methods approved by the EPA. If no method exists, MPCA will suggest candidate methods recommended by the EPA or the State.

Monitoring plan/quality assurance project plan

Permittee or operator must submit a monitoring plan that incorporates a quality assurance plan to the MPCA's Environmental Analysis and Outcomes (EAO) Division at least 30 days prior to the start date of the air monitoring project. The Agency shall review the monitoring quality assurance plan to ensure compliance with EPA requirements of monitoring networks and determine whether adequate quality control measures are utilized to ensure acceptable levels of quality data.

A. Elements of monitoring plan/quality assurance project plan

The primary guidance for developing a quality assurance plan is specified in EPA *Requirements for QA Project Plans (QA/R-5)* and Appendix A to 40 CFR Part 58. Questions regarding the monitoring plan should be sent to the air quality assurance coordinator Katie Rinker at katie.rinker@state.mn.us.

In general, the following elements must be addressed in a monitoring plan:

1. Must include a statement as to the purpose or objective of the monitoring project, including proposed sampling duration.
2. General description of all monitors and monitoring locations.
3. Description of calibration methods and reference standards.
4. Sampling schedule for manual methods.
5. Summary of standard operating procedures.
6. Description of routine quality control checks, including frequency.
7. Control limits for zero, span, and other control checks including audits.
8. Schedule of performance audits.
9. Description reference standards traceability.
10. Plan of corrective actions when monitors fail to meet control/audit limits.
11. Description of data recording and validation methods.
12. Format of data submission.

B. Audits

In addition to the quality assurance program developed by the permittee, the MPCA will conduct performance and systems audits on all criteria pollutant monitors. A similar audit format will be designed for non-criteria pollutants dependent upon pollutant parameters. Frequency of scheduled MPCA audits will be determined by the industrial monitoring process.

2. Data submittal

All permittees required to submit data to the agency must do so no later than 45 working days past the end of each calendar quarter. All data should be submitted electronically to AQRoutineReport.PCA@state.mn.us.

Monitoring site information, monitoring data, and quality control results must be compliant with submission requirements of the MPCA "Ambient Air Quality Data Submission Standard" (Appendix A of this document).

Any questions concerning data submittal should be directed to the Ambient Air Quality Data Manager, Kellie Gavin at 651-757-2379 or kellie.gavin@state.mn.us.

C. Particulate matter (PM) $PM_{2.5}$

The permittee shall include the following data assessment information as per Section 5.2 of Appendix A to 40 CFR Part 58 for each sampling quarter as applicable:

1. Precision probability limits and percentage differences from Section 4.3.1 of Appendix A to 40 CFR Part 58.
2. Flow Rate Verification results and percentage differences from Section 3.2 of Appendix A to 40 CFR Part 58.
3. All data used to calculate the reported estimates of precision and accuracy including reference standard certifications, collocated sampler, and audit results must be made available to the MPCA upon request.

D. Non criteria pollutants

Data collected for non-criteria pollutants must be accompanied by any pertinent quality control information obtained during the reporting quarter. This would include the following information, where applicable:

1. Sampling train flow rate checks.
2. Field blank data.
3. Analytical blank data.
4. Spiked sample percent recoveries.

5. Calibration check standard results.
6. Maintenance logs and internal audit results.
7. Sample duplicate results

Any documentation deemed necessary to assess reported data including, laboratory and field logbooks, mass spectra data, strip charts, and calibration data must be made available to the MPCA upon request.

3. Data validation

The requirement for data recovery is 75 percent of all data possible from each sampling quarter for automated and manual methods. Minimum recovery for the meteorological parameters of wind speed and wind direction is 80 percent from each sampling quarter.

Data that is determined to be invalid is replaced with the appropriate null code. The reasons for invalidation of data must be reported to the MPCA. There should not be any correlation between missing data periods and expected highest concentrations.

Ambient air quality data submission standard

The Environmental Analysis and Outcomes Division (EAO) of the Minnesota Pollution Control Agency collects ambient air quality data in order to assess the quality of the air in the state, and to determine compliance with both the National Ambient Air Quality Standards and Minnesota Ambient Air Quality Standards. The ambient air quality data is collected from a network of air monitoring stations maintained by the EAO and from networks required of some regulated industries. This document specifies the media, file types, data coding formats, and procedures for submitting information related to ambient air quality data to the MPCA.

8. The Minnesota air quality data handling system

The MPCA maintains a computerized data handling system that accepts, stores, and reports information relating to ambient air quality data. It is used to compile and organize air monitoring data from all air monitoring networks within the state into a useful format acceptable to the EPA. To facilitate this, all information submitted to the system must be in a standardized format.

Special input formats and a system of codes developed by the EPA for their Air Quality System (AQS) database or by the MPCA for specific needs have been adopted to ensure standardization and ease of data submission on the part of any contributing organization. In addition, a number of edit checks have been instituted to screen data being submitted to the system. The three classes of information that are accommodated in the Laboratory Information Management System: site information, ambient air quality data, and precision and accuracy information is described below.

1. Site and monitor information:

A detailed descriptive information about the location and environment of the sampling site and the parameters monitored. This includes the state, county, and city where the site is located, the geographic coordinates of the site, and its elevation above local terrain and mean sea level. It also

includes a description of the site location and the dominating influence on the sampler within approximately a one-mile radius of the sampling site.

2. Ambient air quality data:

The information to completely characterize the measurement. This includes the sampling site name, the monitor identification number, the parameters measured, the method of collection and analysis, the duration of the sample, the date and time of the sample, and the result of the measurement.

3. Precision and Accuracy data:

The information to determine the precision and accuracy of collection and analysis methods that were used to obtain ambient air quality data. This includes raw data from bi-monthly precision checks and from quarterly audits.

Site information is submitted only once for each location, although it must be updated whenever the site environment changes. Air quality data are supplied continuously to the EAO by the MPCA network of monitors and periodically by the networks of some regulated industries. Precision and accuracy data are submitted each calendar quarter.

9. Section II. Sampling site and monitor information

Before any air quality data from a monitor can be submitted, site and monitor information must be supplied to the EAO ambient air quality data manager. After the data manager has received the necessary site and monitor information, an identification number will be assigned to the monitor. The identification number must be used to submit the air quality data from the monitor.

Forms *Ambient air monitoring site information form, aq10-19a* and *Ambient air monitoring monitor information form, aq10-19b* are provided for submitting site and monitor information. Whenever the site or monitor information changes, the data manager must be notified of the changes.

A. Site information

The information required to establish a new site is in form *Ambient air monitoring site information form, aq10-19b*; this information must be sent to the data manager whenever a new site is established.

The date of the last air quality sample collected by a monitor must be provided to the data manager when a monitor is removed from a site. All monitors at the site must have a termination date on or before the site termination date.

B. Monitor information

The information required to add a monitor to a site is in form *Ambient air monitoring monitor information form, aq10-19a*; this information must be sent to the data manager for each monitor added to a site.

The date of the last air quality sample collected by a monitor must be provided to the data manager when a monitor is removed from a site.

10. Section III. Data formatting

The technical specifications for acceptable submission of air quality data are as follows:

1. **Dataset file type**: Pipe delimited text file
2. **Data coding format**: AQS formatted transactions. The structure of AQS formatted transactions can be found on the EPA's AQS website at https://aqs.epa.gov/aqsweb/documents/TransactionFormats.html.
3. **Submission**: electronic to AQRoutineReport.PCA@state.mn.us.

11. Section IV. General

All submitted data must adhere to this standard unless the EAO Division of the MPCA approves an alternative. Failure to comply with this standard will result in the rejection of the submitted data and possible violation of any agreements requiring the submission of ambient monitoring data.

Appendix J. 40 CFR pt. 60, subp. IIII

§60.4200 Am I subject to this subpart?

(a) The provisions of this subpart are applicable to manufacturers, owners, and operators of stationary compression ignition (CI) internal combustion engines (ICE) and other persons as specified in paragraphs (a)(1) through (4) of this section. For the purposes of this subpart, the date that construction commences is the date the engine is ordered by the owner or operator.

(1) Manufacturers of stationary CI ICE with a displacement of less than 30 liters per cylinder where the model year is:

(i) 2007 or later, for engines that are not fire pump engines;

(ii) The model year listed in Table 3 to this subpart or later model year, for fire pump engines.

(2) Owners and operators of stationary CI ICE that commence construction after July 11, 2005, where the stationary CI ICE are:

(i) Manufactured after April 1, 2006, and are not fire pump engines, or

(ii) Manufactured as a certified National Fire Protection Association (NFPA) fire pump engine after July 1, 2006.

(3) Owners and operators of any stationary CI ICE that are modified or reconstructed after July 11, 2005 and any person that modifies or reconstructs any stationary CI ICE after July 11, 2005.

(4) The provisions of §60.4208 of this subpart are applicable to all owners and operators of stationary CI ICE that commence construction after July 11, 2005.

(b) The provisions of this subpart are not applicable to stationary CI ICE being tested at a stationary CI ICE test cell/stand.

(c) If you are an owner or operator of an area source subject to this subpart, you are exempt from the obligation to obtain a permit under 40 CFR part 70 or 40 CFR part 71, provided you are not required to obtain a permit under 40 CFR 70.3(a) or 40 CFR 71.3(a) for a reason other than your status as an area source under this subpart. Notwithstanding the previous sentence, you must continue to comply with the provisions of this subpart applicable to area sources.

(d) Stationary CI ICE may be eligible for exemption from the requirements of this subpart as described in 40 CFR part 1068, subpart C (or the exemptions described in 40 CFR part 89, subpart J and 40 CFR part 94, subpart J, for engines that would need to be certified to standards in those parts), except that owners and operators, as well as manufacturers, may be eligible to request an exemption for national security.

(e) Owners and operators of facilities with CI ICE that are acting as temporary replacement units and that are located at a stationary source for less than 1 year and that have been properly certified as meeting the standards that would be applicable to such engine under the appropriate nonroad engine provisions, are not required to meet any other provisions under this subpart with regard to such engines.

Emission Standards for Manufacturers

§60.4201 What emission standards must I meet for non-emergency engines if I am a stationary CI internal combustion engine manufacturer?

(a) Stationary CI internal combustion engine manufacturers must certify their 2007 model year and later non-emergency stationary CI ICE with a maximum engine power less than or equal to 2,237 kilowatt (KW) (3,000 horsepower (HP)) and a displacement of less than 10 liters per cylinder to the certification emission standards for new nonroad CI engines in 40 CFR 89.112, 40 CFR 89.113, 40 CFR 1039.101, 40 CFR 1039.102, 40 CFR 1039.104, 40 CFR 1039.105, 40 CFR 1039.107, and 40 CFR 1039.115, as applicable, for all pollutants, for the same model year and maximum engine power.

(b) Stationary CI internal combustion engine manufacturers must certify their 2007 through 2010 model year non-emergency stationary CI ICE with a maximum engine power greater than 2,237 KW (3,000 HP) and a displacement of less than 10 liters per cylinder to the emission standards in table 1 to this subpart, for all pollutants, for the same maximum engine power.

(c) Stationary CI internal combustion engine manufacturers must certify their 2011 model year and later non-emergency stationary CI ICE with a maximum engine power greater than 2,237 KW (3,000 HP) and a displacement of less than 10 liters per cylinder to the certification emission standards for new nonroad CI engines in 40 CFR 1039.101, 40 CFR 1039.102, 40 CFR 1039.104, 40 CFR 1039.105, 40 CFR 1039.107, and 40 CFR 1039.115, as applicable, for all pollutants, for the same maximum engine power.

(d) Stationary CI internal combustion engine manufacturers must certify the following non-emergency stationary CI ICE to the certification emission standards for new marine CI engines in 40 CFR 94.8, as applicable, for all pollutants, for the same displacement and maximum engine power:

(1) Their 2007 model year through 2012 non-emergency stationary CI ICE with a displacement of greater than or equal to 10 liters per cylinder and less than 30 liters per cylinder;

(2) Their 2013 model year non-emergency stationary CI ICE with a maximum engine power greater than or equal to 3,700 KW (4,958 HP) and a displacement of greater than or equal to 10 liters per cylinder and less than 15 liters per cylinder; and

(3) Their 2013 model year non-emergency stationary CI ICE with a displacement of greater than or equal to 15 liters per cylinder and less than 30 liters per cylinder.

(e) Stationary CI internal combustion engine manufacturers must certify the following non-emergency stationary CI ICE to the certification emission standards and other requirements for new marine CI engines in 40 CFR 1042.101, 40 CFR 1042.107, 40 CFR 1042.110, 40 CFR 1042.115, 40 CFR 1042.120, and 40 CFR 1042.145, as applicable, for all pollutants, for the same displacement and maximum engine power:

(1) Their 2013 model year non-emergency stationary CI ICE with a maximum engine power less than 3,700 KW (4,958 HP) and a displacement of greater than or equal to 10 liters per cylinder and less than 15 liters per cylinder; and

(2) Their 2014 model year and later non-emergency stationary CI ICE with a displacement of greater than or equal to 10 liters per cylinder and less than 30 liters per cylinder.

(f) Notwithstanding the requirements in paragraphs (a) through (c) of this section, stationary non-emergency CI ICE identified in paragraphs (a) and (c) may be certified to the provisions of 40 CFR part 94 or, if Table 1 to 40 CFR 1042.1 identifies 40 CFR part 1042 as being applicable, 40 CFR part 1042, if the engines will be used solely in either or both of the following locations:

(1) Remote areas of Alaska; and

(2) Marine offshore installations.

(g) Notwithstanding the requirements in paragraphs (a) through (f) of this section, stationary CI internal combustion engine manufacturers are not required to certify reconstructed engines; however manufacturers may elect to do so. The reconstructed engine must be certified to the emission standards specified in paragraphs (a) through (e) of this section that are applicable to the model year, maximum engine power, and displacement of the reconstructed stationary CI ICE.

(h) Stationary CI ICE certified to the standards in 40 CFR part 1039 and equipped with auxiliary emission control devices (AECDs) as specified in 40 CFR 1039.665 must meet the Tier 1 certification emission standards for new nonroad CI engines in 40 CFR 89.112 while the AECD is activated during a qualified emergency situation. A qualified emergency situation is defined in 40 CFR 1039.665. When the qualified emergency situation has ended and the AECD is deactivated, the engine must resume meeting the otherwise applicable emission standard specified in this section.

§60.4202 What emission standards must I meet for emergency engines if I am a stationary CI internal combustion engine manufacturer?

(a) Stationary CI internal combustion engine manufacturers must certify their 2007 model year and later emergency stationary CI ICE with a maximum engine power less than or equal to 2,237 KW (3,000 HP) and a displacement of less than 10 liters per cylinder that are not fire pump engines to the emission standards specified in paragraphs (a)(1) through (2) of this section.

(1) For engines with a maximum engine power less than 37 KW (50 HP):

(i) The certification emission standards for new nonroad CI engines for the same model year and maximum engine power in 40 CFR 89.112 and 40 CFR 89.113 for all pollutants for model year 2007 engines, and

(ii) The certification emission standards for new nonroad CI engines in 40 CFR 1039.104, 40 CFR 1039.105, 40 CFR 1039.107, 40 CFR 1039.115, and table 2 to this subpart, for 2008 model year and later engines.

(2) For engines with a maximum engine power greater than or equal to 37 KW (50 HP), the certification emission standards for new nonroad CI engines for the same model year and maximum engine power in 40 CFR 89.112 and 40 CFR 89.113 for all pollutants beginning in model year 2007.

(b) Stationary CI internal combustion engine manufacturers must certify their 2007 model year and later emergency stationary CI ICE with a maximum engine power greater than 2,237 KW (3,000 HP) and a displacement of less than 10 liters per cylinder that are not fire pump engines to the emission standards specified in paragraphs (b)(1) through (2) of this section.

(1) For 2007 through 2010 model years, the emission standards in table 1 to this subpart, for all pollutants, for the same maximum engine power.

(2) For 2011 model year and later, the certification emission standards for new nonroad CI engines for engines of the same model year and maximum engine power in 40 CFR 89.112 and 40 CFR 89.113 for all pollutants.

(c) [Reserved]

(d) Beginning with the model years in table 3 to this subpart, stationary CI internal combustion engine manufacturers must certify their fire pump stationary CI ICE to the emission standards in table 4 to this subpart, for all pollutants, for the same model year and NFPA nameplate power.

(e) Stationary CI internal combustion engine manufacturers must certify the following emergency stationary CI ICE that are not fire pump engines to the certification emission standards for new marine CI engines in 40 CFR 94.8, as applicable, for all pollutants, for the same displacement and maximum engine power:

(1) Their 2007 model year through 2012 emergency stationary CI ICE with a displacement of greater than or equal to 10 liters per cylinder and less than 30 liters per cylinder;

(2) Their 2013 model year and later emergency stationary CI ICE with a maximum engine power greater than or equal to 3,700 KW (4,958 HP) and a displacement of greater than or equal to 10 liters per cylinder and less than 15 liters per cylinder;

(3) Their 2013 model year emergency stationary CI ICE with a displacement of greater than or equal to 15 liters per cylinder and less than 30 liters per cylinder; and

(4) Their 2014 model year and later emergency stationary CI ICE with a maximum engine power greater than or equal to 2,000 KW (2,682 HP) and a displacement of greater than or equal to 15 liters per cylinder and less than 30 liters per cylinder.

(f) Stationary CI internal combustion engine manufacturers must certify the following emergency stationary CI ICE to the certification emission standards and other requirements applicable to Tier 3 new marine CI engines in 40 CFR 1042.101, 40 CFR 1042.107, 40 CFR 1042.115, 40 CFR 1042.120, and 40 CFR 1042.145, for all pollutants, for the same displacement and maximum engine power:

(1) Their 2013 model year and later emergency stationary CI ICE with a maximum engine power less than 3,700 KW (4,958 HP) and a displacement of greater than or equal to 10 liters per cylinder and less than 15 liters per cylinder; and

(2) Their 2014 model year and later emergency stationary CI ICE with a maximum engine power less than 2,000 KW (2,682 HP) and a displacement of greater than or equal to 15 liters per cylinder and less than 30 liters per cylinder.

(g) Notwithstanding the requirements in paragraphs (a) through (d) of this section, stationary emergency CI internal combustion engines identified in paragraphs (a) and (c) may be certified to the provisions of 40 CFR part 94 or, if Table 2 to 40 CFR 1042.101 identifies Tier 3 standards as being applicable, the requirements applicable to Tier 3 engines in 40 CFR part 1042, if the engines will be used solely in either or both of the following locations:

(1) Remote areas of Alaska; and

(2) Marine offshore installations.

(h) Notwithstanding the requirements in paragraphs (a) through (f) of this section, stationary CI internal combustion engine manufacturers are not required to certify reconstructed engines; however manufacturers may elect to do so. The reconstructed engine must be certified to the emission standards specified in paragraphs (a) through (f) of this section that are applicable to the model year, maximum engine power and displacement of the reconstructed emergency stationary CI ICE.

§60.4203 How long must my engines meet the emission standards if I am a manufacturer of stationary CI internal combustion engines?

Engines manufactured by stationary CI internal combustion engine manufacturers must meet the emission standards as required in §§60.4201 and 60.4202 during the certified emissions life of the engines.

Emission Standards for Owners and Operators

§60.4204 What emission standards must I meet for non-emergency engines if I am an owner or operator of a stationary CI internal combustion engine?

(a) Owners and operators of pre-2007 model year non-emergency stationary CI ICE with a displacement of less than 10 liters per cylinder must comply with the emission standards in table 1 to this subpart. Owners and operators of pre-2007 model year non-emergency stationary CI ICE with a displacement of greater than or equal to 10 liters per cylinder and less than 30 liters per cylinder must comply with the emission standards in 40 CFR 94.8(a)(1).

(b) Owners and operators of 2007 model year and later non-emergency stationary CI ICE with a displacement of less than 30 liters per cylinder must comply with the emission standards for new CI engines in §60.4201 for their 2007 model year and later stationary CI ICE, as applicable.

(c) Owners and operators of non-emergency stationary CI engines with a displacement of greater than or equal to 30 liters per cylinder must meet the following requirements:

(1) For engines installed prior to January 1, 2012, limit the emissions of NO_X in the stationary CI internal combustion engine exhaust to the following:

(i) 17.0 grams per kilowatt-hour (g/KW-hr) (12.7 grams per horsepower-hr (g/HP-hr)) when maximum engine speed is less than 130 revolutions per minute (rpm);

(ii) $45 \cdot n^{-0.2}$ g/KW-hr ($34 \cdot n^{-0.2}$ g/HP-hr) when maximum engine speed is 130 or more but less than 2,000 rpm, where n is maximum engine speed; and

(iii) 9.8 g/KW-hr (7.3 g/HP-hr) when maximum engine speed is 2,000 rpm or more.

(2) For engines installed on or after January 1, 2012 and before January 1, 2016, limit the emissions of NO_X in the stationary CI internal combustion engine exhaust to the following:

(i) 14.4 g/KW-hr (10.7 g/HP-hr) when maximum engine speed is less than 130 rpm;

(ii) $44 \cdot n^{-0.23}$ g/KW-hr ($33 \cdot n^{-0.23}$ g/HP-hr) when maximum engine speed is greater than or equal to 130 but less than 2,000 rpm and where n is maximum engine speed; and

(iii) 7.7 g/KW-hr (5.7 g/HP-hr) when maximum engine speed is greater than or equal to 2,000 rpm.

(3) For engines installed on or after January 1, 2016, limit the emissions of NO_X in the stationary CI internal combustion engine exhaust to the following:

(i) 3.4 g/KW-hr (2.5 g/HP-hr) when maximum engine speed is less than 130 rpm;

(ii) $9.0 \cdot n^{-0.20}$ g/KW-hr ($6.7 \cdot n^{-0.20}$ g/HP-hr) where n (maximum engine speed) is 130 or more but less than 2,000 rpm; and

(iii) 2.0 g/KW-hr (1.5 g/HP-hr) where maximum engine speed is greater than or equal to 2,000 rpm.

(4) Reduce particulate matter (PM) emissions by 60 percent or more, or limit the emissions of PM in the stationary CI internal combustion engine exhaust to 0.15 g/KW-hr (0.11 g/HP-hr).

(d) Owners and operators of non-emergency stationary CI ICE with a displacement of less than 30 liters per cylinder who conduct performance tests in-use must meet the not-to-exceed (NTE) standards as indicated in §60.4212.

(e) Owners and operators of any modified or reconstructed non-emergency stationary CI ICE subject to this subpart must meet the emission standards applicable to the model year, maximum engine power, and displacement of the modified or reconstructed non-emergency stationary CI ICE that are specified in paragraphs (a) through (d) of this section.

(f) Owners and operators of stationary CI ICE certified to the standards in 40 CFR part 1039 and equipped with AECDs as specified in 40 CFR 1039.665 must meet the Tier 1 certification emission standards for new nonroad CI engines in 40 CFR 89.112 while the AECD is activated during a qualified emergency situation. A qualified emergency

situation is defined in 40 CFR 1039.665. When the qualified emergency situation has ended and the AECD is deactivated, the engine must resume meeting the otherwise applicable emission standard specified in this section.

§60.4205 What emission standards must I meet for emergency engines if I am an owner or operator of a stationary CI internal combustion engine?

(a) Owners and operators of pre-2007 model year emergency stationary CI ICE with a displacement of less than 10 liters per cylinder that are not fire pump engines must comply with the emission standards in Table 1 to this subpart. Owners and operators of pre-2007 model year emergency stationary CI ICE with a displacement of greater than or equal to 10 liters per cylinder and less than 30 liters per cylinder that are not fire pump engines must comply with the emission standards in 40 CFR 94.8(a)(1).

(b) Owners and operators of 2007 model year and later emergency stationary CI ICE with a displacement of less than 30 liters per cylinder that are not fire pump engines must comply with the emission standards for new nonroad CI engines in §60.4202, for all pollutants, for the same model year and maximum engine power for their 2007 model year and later emergency stationary CI ICE.

(c) Owners and operators of fire pump engines with a displacement of less than 30 liters per cylinder must comply with the emission standards in table 4 to this subpart, for all pollutants.

(d) Owners and operators of emergency stationary CI engines with a displacement of greater than or equal to 30 liters per cylinder must meet the requirements in this section.

(1) For engines installed prior to January 1, 2012, limit the emissions of NO_X in the stationary CI internal combustion engine exhaust to the following:

(i) 17.0 g/KW-hr (12.7 g/HP-hr) when maximum engine speed is less than 130 rpm;

(ii) $45 \cdot n^{-0.2}$ g/KW-hr ($34 \cdot n^{-0.2}$ g/HP-hr) when maximum engine speed is 130 or more but less than 2,000 rpm, where n is maximum engine speed; and

(iii) 9.8 g/kW-hr (7.3 g/HP-hr) when maximum engine speed is 2,000 rpm or more.

(2) For engines installed on or after January 1, 2012, limit the emissions of NO_X in the stationary CI internal combustion engine exhaust to the following:

(i) 14.4 g/KW-hr (10.7 g/HP-hr) when maximum engine speed is less than 130 rpm;

(ii) $44 \cdot n^{-0.23}$ g/KW-hr ($33 \cdot n^{-0.23}$ g/HP-hr) when maximum engine speed is greater than or equal to 130 but less than 2,000 rpm and where n is maximum engine speed; and

(iii) 7.7 g/KW-hr (5.7 g/HP-hr) when maximum engine speed is greater than or equal to 2,000 rpm.

(3) Limit the emissions of PM in the stationary CI internal combustion engine exhaust to 0.40 g/KW-hr (0.30 g/HP-hr).

(e) Owners and operators of emergency stationary CI ICE with a displacement of less than 30 liters per cylinder who conduct performance tests in-use must meet the NTE standards as indicated in §60.4212.

(f) Owners and operators of any modified or reconstructed emergency stationary CI ICE subject to this subpart must meet the emission standards applicable to the model year, maximum engine power, and displacement of the modified or reconstructed CI ICE that are specified in paragraphs (a) through (e) of this section.

§60.4206 How long must I meet the emission standards if I am an owner or operator of a stationary CI internal combustion engine?

Owners and operators of stationary CI ICE must operate and maintain stationary CI ICE that achieve the emission standards as required in §§60.4204 and 60.4205 over the entire life of the engine.

Fuel Requirements for Owners and Operators

§60.4207 What fuel requirements must I meet if I am an owner or operator of a stationary CI internal combustion engine subject to this subpart?

(a) Beginning October 1, 2007, owners and operators of stationary CI ICE subject to this subpart that use dieselfuel must use diesel fuel that meets the requirements of 40 CFR 80.510(a).

(b) Beginning October 1, 2010, owners and operators of stationary CI ICE subject to this subpart with a displacement of less than 30 liters per cylinder that use diesel fuel must use diesel fuel that meets the requirements of 40 CFR 80.510(b) for nonroad diesel fuel, except that any existing diesel fuel purchased (or otherwise obtained) prior to October 1, 2010, may be used until depleted.

(c) [Reserved]

(d) Beginning June 1, 2012, owners and operators of stationary CI ICE subject to this subpart with a displacementof greater than or equal to 30 liters per cylinder are no longer subject to the requirements of paragraph (a) of this section, and must use fuel that meets a maximum per-gallon sulfur content of 1,000 parts per million (ppm).

(e) Stationary CI ICE that have a national security exemption under §60.4200(d) are also exempt from the fuel requirements in this section.

Other Requirements for Owners and Operators

§60.4208 What is the deadline for importing or installing stationary CI ICE produced in previous model years?

(a) After December 31, 2008, owners and operators may not install stationary CI ICE (excluding fire pumpengines) that do not meet the applicable requirements for 2007 model year engines.

(b) After December 31, 2009, owners and operators may not install stationary CI ICE with a maximum engine power of less than 19 KW (25 HP) (excluding fire pump engines) that do not meet the applicable requirements for 2008 model year engines.

(c) After December 31, 2014, owners and operators may not install non-emergency stationary CI ICE with a maximum engine power of greater than or equal to 19 KW (25 HP) and less than 56 KW (75 HP) that do notmeet the applicable requirements for 2013 model year non-emergency engines.

(d) After December 31, 2013, owners and operators may not install non-emergency stationary CI ICE with a maximum engine power of greater than or equal to 56 KW (75 HP) and less than 130 KW (175 HP) that do notmeet the applicable requirements for 2012 model year non-emergency engines.

(e) After December 31, 2012, owners and operators may not install non-emergency stationary CI ICE with a maximum engine power of greater than or equal to 130 KW (175 HP), including those above 560 KW (750 HP), that do not meet the applicable requirements for 2011 model year non-emergency engines.

(f) After December 31, 2016, owners and operators may not install non-emergency stationary CI ICE with a maximum engine power of greater than or equal to 560 KW (750 HP) that do not meet the applicable requirements for 2015 model year non-emergency engines.

(g) After December 31, 2018, owners and operators may not install non-emergency stationary CI ICE with a maximum engine power greater than or equal to 600 KW (804 HP) and less than 2,000 KW (2,680 HP) and a displacement of greater than or equal to 10 liters per cylinder and less than 30 liters per cylinder that do not meet the applicable requirements for 2017 model year non-emergency engines.

(h) In addition to the requirements specified in §§60.4201, 60.4202, 60.4204, and 60.4205, it is prohibited to import stationary CI ICE with a displacement of less than 30 liters per cylinder that do not meet the applicable requirements specified in paragraphs (a) through (g) of this section after the dates specified in paragraphs (a) through (g) of this section.

(i) The requirements of this section do not apply to owners or operators of stationary CI ICE that have been modified, reconstructed, and do not apply to engines that were removed from one existing location and reinstalled at a new location.

§60.4209 What are the monitoring requirements if I am an owner or operator of a stationary CI internal combustion engine?

If you are an owner or operator, you must meet the monitoring requirements of this section. In addition, you must also meet the monitoring requirements specified in §60.4211.

(a) If you are an owner or operator of an emergency stationary CI internal combustion engine that does not meet the standards applicable to non-emergency engines, you must install a non-resettable hour meter prior to startup of the engine.

(b) If you are an owner or operator of a stationary CI internal combustion engine equipped with a diesel particulate filter to comply with the emission standards in §60.4204, the diesel particulate filter must be installed with a backpressure monitor that notifies the owner or operator when the high backpressure limit of the engine is approached.

Compliance Requirements

§60.4210 What are my compliance requirements if I am a stationary CI internal combustion engine manufacturer?

(a) Stationary CI internal combustion engine manufacturers must certify their stationary CI ICE with a displacement of less than 10 liters per cylinder to the emission standards specified in §60.4201(a) through (c) and §60.4202(a), (b) and (d) using the certification procedures required in 40 CFR part 89, subpart B, or 40 CFR part 1039, subpart C, as applicable, and must test their engines as specified in those parts. For the purposes of this subpart, engines certified to the standards in table 1 to this subpart shall be subject to the same requirements as engines certified to the standards in 40 CFR part 89. For the purposes of this subpart, engines certified to the standards in table 4 to this subpart shall be subject to the same requirements as engines certified to the standards in 40 CFR part 89, except that engines with NFPA nameplate power of less than 37 KW (50 HP) certified to model year 2011 or later standards shall be subject to the same requirements as engines certified to the standards in 40 CFR part 1039.

(b) Stationary CI internal combustion engine manufacturers must certify their stationary CI ICE with a displacement of greater than or equal to 10 liters per cylinder and less than 30 liters per cylinder to the emission standards specified in §60.4201(d) and (e) and §60.4202(e) and (f) using the certification procedures required in 40 CFR part 94, subpart C, or 40 CFR part 1042, subpart C, as applicable, and must test their engines as specified in 40 CFR part 94 or 1042, as applicable.

(c) Stationary CI internal combustion engine manufacturers must meet the requirements of 40 CFR 1039.120, 1039.125, 1039.130, and 1039.135, and 40 CFR part 1068 for engines that are certified to the emission standards in

40 CFR part 1039. Stationary CI internal combustion engine manufacturers must meet the corresponding provisions of 40 CFR part 89, 40 CFR part 94 or 40 CFR part 1042 for engines that would be covered by that part if they were nonroad (including marine) engines. Labels on such engines must refer to stationary engines, rather than or in addition to nonroad or marine engines, as appropriate. Stationary CI internal combustion engine manufacturers must label their engines according to paragraphs (c)(1) through (3) of this section.

(1) Stationary CI internal combustion engines manufactured from January 1, 2006 to March 31, 2006 (January 1, 2006 to June 30, 2006 for fire pump engines), other than those that are part of certified engine families under the nonroad CI engine regulations, must be labeled according to 40 CFR 1039.20.

(2) Stationary CI internal combustion engines manufactured from April 1, 2006 to December 31, 2006 (or, for fire pump engines, July 1, 2006 to December 31 of the year preceding the year listed in table 3 to this subpart) must be labeled according to paragraphs (c)(2)(i) through (iii) of this section:

(i) Stationary CI internal combustion engines that are part of certified engine families under the nonroad regulations must meet the labeling requirements for nonroad CI engines, but do not have to meet the labeling requirements in 40 CFR 1039.20.

(ii) Stationary CI internal combustion engines that meet Tier 1 requirements (or requirements for fire pumps) under this subpart, but do not meet the requirements applicable to nonroad CI engines must be labeled according to 40 CFR 1039.20. The engine manufacturer may add language to the label clarifying that the engine meets Tier 1 requirements (or requirements for fire pumps) of this subpart.

(iii) Stationary CI internal combustion engines manufactured after April 1, 2006 that do not meet Tier 1 requirements of this subpart, or fire pumps engines manufactured after July 1, 2006 that do not meet the requirements for fire pumps under this subpart, may not be used in the U.S. If any such engines are manufactured in the U.S. after April 1, 2006 (July 1, 2006 for fire pump engines), they must be exported or must be brought into compliance with the appropriate standards prior to initial operation. The export provisions of 40 CFR 1068.230 would apply to engines for export and the manufacturers must label such engines according to 40 CFR 1068.230.

(3) Stationary CI internal combustion engines manufactured after January 1, 2007 (for fire pump engines, after January 1 of the year listed in table 3 to this subpart, as applicable) must be labeled according to paragraphs (c)(3)(i) through (iii) of this section.

(i) Stationary CI internal combustion engines that meet the requirements of this subpart and the corresponding requirements for nonroad (including marine) engines of the same model year and HP must be labeled according to the provisions in 40 CFR parts 89, 94, 1039 or 1042, as appropriate.

(ii) Stationary CI internal combustion engines that meet the requirements of this subpart, but are not certified to the standards applicable to nonroad (including marine) engines of the same model year and HP must be labeled according to the provisions in 40 CFR parts 89, 94, 1039 or 1042, as appropriate, but the words “stationary” must be included instead of “nonroad” or “marine” on the label. In addition, such engines must be labeled according to 40 CFR 1039.20.

(iii) Stationary CI internal combustion engines that do not meet the requirements of this subpart must be labeled according to 40 CFR 1068.230 and must be exported under the provisions of 40 CFR 1068.230.

(d) An engine manufacturer certifying an engine family or families to standards under this subpart that are identical to standards applicable under 40 CFR parts 89, 94, 1039 or 1042 for that model year may certify any such family that contains both nonroad (including marine) and stationary engines as a single engine family and/or may include

any such family containing stationary engines in the averaging, banking and trading provisions applicable for such engines under those parts.

(e) Manufacturers of engine families discussed in paragraph (d) of this section may meet the labeling requirements referred to in paragraph (c) of this section for stationary CI ICE by either adding a separate label containing the information required in paragraph (c) of this section or by adding the words “and stationary” after the word “nonroad” or “marine,” as appropriate, to the label.

(f) Starting with the model years shown in table 5 to this subpart, stationary CI internal combustion engine manufacturers must add a permanent label stating that the engine is for stationary emergency use only to each new emergency stationary CI internal combustion engine greater than or equal to 19 KW (25 HP) that meets all the emission standards for emergency engines in §60.4202 but does not meet all the emission standards for non-emergency engines in §60.4201. The label must be added according to the labeling requirements specified in 40 CFR 1039.135(b). Engine manufacturers must specify in the owner's manual that operation of emergency engines is limited to emergency operations and required maintenance and testing.

(g) Manufacturers of fire pump engines may use the test cycle in table 6 to this subpart for testing fire pump engines and may test at the NFPA certified nameplate HP, provided that the engine is labeled as “Fire Pump Applications Only”.

(h) Engine manufacturers, including importers, may introduce into commerce uncertified engines or engines certified to earlier standards that were manufactured before the new or changed standards took effect until inventories are depleted, as long as such engines are part of normal inventory. For example, if the engine manufacturers' normal industry practice is to keep on hand a one-month supply of engines based on its projected sales, and a new tier of standards starts to apply for the 2009 model year, the engine manufacturer may manufacture engines based on the normal inventory requirements late in the 2008 model year, and sell those engines for installation. The engine manufacturer may not circumvent the provisions of §60.4201 or §60.4202 by stockpiling engines that are built before new or changed standards take effect. Stockpiling of such engines beyond normal industry practice is a violation of this subpart.

(i) The replacement engine provisions of 40 CFR 89.1003(b)(7), 40 CFR 94.1103(b)(3), 40 CFR 94.1103(b)(4) and 40 CFR 1068.240 are applicable to stationary CI engines replacing existing equipment that is less than 15 years old.

(j) Stationary CI ICE manufacturers may equip their stationary CI internal combustion engines certified to the emission standards in 40 CFR part 1039 with AECDs for qualified emergency situations according to the requirements of 40 CFR 1039.665. Manufacturers of stationary CI ICE equipped with AECDs as allowed by 40 CFR 1039.665 must meet all of the requirements in 40 CFR 1039.665 that apply to manufacturers. Manufacturers must document that the engine complies with the Tier 1 standard in 40 CFR 89.112 when the AECD is activated. Manufacturers must provide any relevant testing, engineering analysis, or other information in sufficient detail to support such statement when applying for certification (including amending an existing certificate) of an engine equipped with an AECD as allowed by 40 CFR 1039.665.

§60.4211 What are my compliance requirements if I am an owner or operator of a stationary CI internal combustion engine?

(a) If you are an owner or operator and must comply with the emission standards specified in this subpart, you must do all of the following, except as permitted under paragraph (g) of this section:

(1) Operate and maintain the stationary CI internal combustion engine and control device according to the manufacturer's emission-related written instructions;

(2) Change only those emission-related settings that are permitted by the manufacturer; and

(3) Meet the requirements of 40 CFR parts 89, 94 and/or 1068, as they apply to you.

(b) If you are an owner or operator of a pre-2007 model year stationary CI internal combustion engine and must comply with the emission standards specified in §§60.4204(a) or 60.4205(a), or if you are an owner or operator of a CI fire pump engine that is manufactured prior to the model years in table 3 to this subpart and must comply with the emission standards specified in §60.4205(c), you must demonstrate compliance according to one of the methods specified in paragraphs (b)(1) through (5) of this section.

(1) Purchasing an engine certified according to 40 CFR part 89 or 40 CFR part 94, as applicable, for the same model year and maximum engine power. The engine must be installed and configured according to the manufacturer's specifications.

(2) Keeping records of performance test results for each pollutant for a test conducted on a similar engine. The test must have been conducted using the same methods specified in this subpart and these methods must have been followed correctly.

(3) Keeping records of engine manufacturer data indicating compliance with the standards.

(4) Keeping records of control device vendor data indicating compliance with the standards.

(5) Conducting an initial performance test to demonstrate compliance with the emission standards according to the requirements specified in §60.4212, as applicable.

(c) If you are an owner or operator of a 2007 model year and later stationary CI internal combustion engine and must comply with the emission standards specified in §60.4204(b) or §60.4205(b), or if you are an owner or operator of a CI fire pump engine that is manufactured during or after the model year that applies to your fire pump engine power rating in table 3 to this subpart and must comply with the emission standards specified in §60.4205(c), you must comply by purchasing an engine certified to the emission standards in §60.4204(b), or §60.4205(b) or (c), as applicable, for the same model year and maximum (or in the case of fire pumps, NFPA nameplate) engine power. The engine must be installed and configured according to the manufacturer's emission-related specifications, except as permitted in paragraph (g) of this section.

(d) If you are an owner or operator and must comply with the emission standards specified in §60.4204(c) or §60.4205(d), you must demonstrate compliance according to the requirements specified in paragraphs (d)(1) through (3) of this section.

(1) Conducting an initial performance test to demonstrate initial compliance with the emission standards as specified in §60.4213.

(2) Establishing operating parameters to be monitored continuously to ensure the stationary internal combustion engine continues to meet the emission standards. The owner or operator must petition the Administrator for approval of operating parameters to be monitored continuously. The petition must include the information described in paragraphs (d)(2)(i) through (v) of this section.

(i) Identification of the specific parameters you propose to monitor continuously;

(ii) A discussion of the relationship between these parameters and NO_x and PM emissions, identifying how the emissions of these pollutants change with changes in these parameters, and how limitations on these parameters will serve to limit NO_x and PM emissions;

(iii) A discussion of how you will establish the upper and/or lower values for these parameters which will establish the limits on these parameters in the operating limitations;

(iv) A discussion identifying the methods and the instruments you will use to monitor these parameters, as well as the relative accuracy and precision of these methods and instruments; and

(v) A discussion identifying the frequency and methods for recalibrating the instruments you will use for monitoring these parameters.

(3) For non-emergency engines with a displacement of greater than or equal to 30 liters per cylinder, conducting annual performance tests to demonstrate continuous compliance with the emission standards as specified in §60.4213.

(e) If you are an owner or operator of a modified or reconstructed stationary CI internal combustion engine and must comply with the emission standards specified in §60.4204(e) or §60.4205(f), you must demonstrate compliance according to one of the methods specified in paragraphs (e)(1) or (2) of this section.

(1) Purchasing, or otherwise owning or operating, an engine certified to the emission standards in §60.4204(e) or §60.4205(f), as applicable.

(2) Conducting a performance test to demonstrate initial compliance with the emission standards according to the requirements specified in §60.4212 or §60.4213, as appropriate. The test must be conducted within 60 days after the engine commences operation after the modification or reconstruction.

(f) If you own or operate an emergency stationary ICE, you must operate the emergency stationary ICE according to the requirements in paragraphs (f)(1) through (3) of this section. In order for the engine to be considered an emergency stationary ICE under this subpart, any operation other than emergency operation, maintenance and testing, emergency demand response, and operation in non-emergency situations for 50 hours per year, as described in paragraphs (f)(1) through (3) of this section, is prohibited. If you do not operate the engine according to the requirements in paragraphs (f)(1) through (3) of this section, the engine will not be considered an emergency engine under this subpart and must meet all requirements for non-emergency engines.

(1) There is no time limit on the use of emergency stationary ICE in emergency situations.

(2) You may operate your emergency stationary ICE for any combination of the purposes specified in paragraphs (f)(2)(i) through (iii) of this section for a maximum of 100 hours per calendar year. Any operation for non-emergency situations as allowed by paragraph (f)(3) of this section counts as part of the 100 hours per calendar year allowed by this paragraph (f)(2).

(i) Emergency stationary ICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by federal, state or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. The owner or operator may petition the Administrator for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that federal, state, or local standards require maintenance and testing of emergency ICE beyond 100 hours per calendar year.

(ii) ~~Emergency stationary ICE may be operated for emergency demand response for periods in which the Reliability Coordinator under the North American Electric Reliability Corporation (NERC) Reliability Standard EOP-002-3, Capacity and Energy Emergencies (incorporated by reference, see §60.17), or other authorized entity as determined by the Reliability Coordinator, has declared an Energy Emergency Alert Level 2 as defined in the NERC Reliability Standard EOP-002-3.~~ [vacated by May 4, 2016 court mandate]

(iii) ~~Emergency stationary ICE may be operated for periods where there is a deviation of voltage or frequency of 5 percent or greater below standard voltage or frequency.~~ [vacated by May 4, 2016 court mandate]

(3) Emergency stationary ICE may be operated for up to 50 hours per calendar year in non-emergency situations. The 50 hours of operation in non-emergency situations are counted as part of the 100 hours per calendar year for maintenance and testing and emergency demand response provided in paragraph (f)(2) of this section. Except as provided in paragraph (f)(3)(i) of this section, the 50 hours per calendar year for non-emergency

situations cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial arrangement with another entity.

(i) The 50 hours per year for non-emergency situations can be used to supply power as part of a financial arrangement with another entity if all of the following conditions are met:

(A) The engine is dispatched by the local balancing authority or local transmission and distribution system operator;

(B) The dispatch is intended to mitigate local transmission and/or distribution limitations so as to avert potential voltage collapse or line overloads that could lead to the interruption of power supply in a local area or region.

(C) The dispatch follows reliability, emergency operation or similar protocols that follow specific NERC, regional, state, public utility commission or local standards or guidelines.

(D) The power is provided only to the facility itself or to support the local transmission and distribution system.

(E) The owner or operator identifies and records the entity that dispatches the engine and the specific NERC, regional, state, public utility commission or local standards or guidelines that are being followed for dispatching the engine. The local balancing authority or local transmission and distribution system operator may keep these records on behalf of the engine owner or operator.

(ii) [Reserved]

(g) If you do not install, configure, operate, and maintain your engine and control device according to the manufacturer's emission-related written instructions, or you change emission-related settings in a way that is not permitted by the manufacturer, you must demonstrate compliance as follows:

(1) If you are an owner or operator of a stationary CI internal combustion engine with maximum engine power less than 100 HP, you must keep a maintenance plan and records of conducted maintenance to demonstrate compliance and must, to the extent practicable, maintain and operate the engine in a manner consistent with good air pollution control practice for minimizing emissions. In addition, if you do not install and configure the engine and control device according to the manufacturer's emission-related written instructions, or you change the emission-related settings in a way that is not permitted by the manufacturer, you must conduct an initial performance test to demonstrate compliance with the applicable emission standards within 1 year of such action.

(2) If you are an owner or operator of a stationary CI internal combustion engine greater than or equal to 100 HP and less than or equal to 500 HP, you must keep a maintenance plan and records of conducted maintenance and must, to the extent practicable, maintain and operate the engine in a manner consistent with good air pollution control practice for minimizing emissions. In addition, you must conduct an initial performance test to demonstrate compliance with the applicable emission standards within 1 year of startup, or within 1 year after an engine and control device is no longer installed, configured, operated, and maintained in accordance with the manufacturer's emission-related written instructions, or within 1 year after you change emission-related settings in a way that is not permitted by the manufacturer.

(3) If you are an owner or operator of a stationary CI internal combustion engine greater than 500 HP, you must keep a maintenance plan and records of conducted maintenance and must, to the extent practicable, maintain and operate the engine in a manner consistent with good air pollution control practice for minimizing emissions. In addition, you must conduct an initial performance test to demonstrate compliance with the applicable emission standards within 1 year of startup, or within 1 year after an engine and control device is no longer

installed, configured, operated, and maintained in accordance with the manufacturer's emission-related written instructions, or within 1 year after you change emission-related settings in a way that is not permitted by the manufacturer. You must conduct subsequent performance testing every 8,760 hours of engine operation or 3 years, whichever comes first, thereafter to demonstrate compliance with the applicable emission standards.

(h) The requirements for operators and prohibited acts specified in 40 CFR 1039.665 apply to owners or operators of stationary CI ICE equipped with AECDs for qualified emergency situations as allowed by 40 CFR 1039.665.

Testing Requirements for Owners and Operators

§60.4212 What test methods and other procedures must I use if I am an owner or operator of a stationary CI internal combustion engine with a displacement of less than 30 liters per cylinder?

Owners and operators of stationary CI ICE with a displacement of less than 30 liters per cylinder who conduct performance tests pursuant to this subpart must do so according to paragraphs (a) through (e) of this section.

(a) The performance test must be conducted according to the in-use testing procedures in 40 CFR part 1039, subpart F, for stationary CI ICE with a displacement of less than 10 liters per cylinder, and according to 40 CFR part 1042, subpart F, for stationary CI ICE with a displacement of greater than or equal to 10 liters per cylinder and less than 30 liters per cylinder.

(b) Exhaust emissions from stationary CI ICE that are complying with the emission standards for new CI engines in 40 CFR part 1039 must not exceed the not-to-exceed (NTE) standards for the same model year and maximum engine power as required in 40 CFR 1039.101(e) and 40 CFR 1039.102(g)(1), except as specified in 40 CFR 1039.104(d). This requirement starts when NTE requirements take effect for nonroad diesel engines under 40 CFR part 1039.

(c) Exhaust emissions from stationary CI ICE that are complying with the emission standards for new CI engines in 40 CFR 89.112 or 40 CFR 94.8, as applicable, must not exceed the NTE numerical requirements, rounded to the same number of decimal places as the applicable standard in 40 CFR 89.112 or 40 CFR 94.8, as applicable, determined from the following equation:

$$\text{NTE requirement for each pollutant} = (1.25) \times (\text{STD}) \qquad \text{(Eq. 1)}$$

Where:

STD = The standard specified for that pollutant in 40 CFR 89.112 or 40 CFR 94.8, as applicable.

Alternatively, stationary CI ICE that are complying with the emission standards for new CI engines in 40 CFR 89.112 or 40 CFR 94.8 may follow the testing procedures specified in §60.4213 of this subpart, as appropriate.

(d) Exhaust emissions from stationary CI ICE that are complying with the emission standards for pre-2007 model year engines in §60.4204(a), §60.4205(a), or §60.4205(c) must not exceed the NTE numerical requirements, rounded to the same number of decimal places as the applicable standard in §60.4204(a), §60.4205(a), or §60.4205(c), determined from the equation in paragraph (c) of this section.

Where:

STD = The standard specified for that pollutant in §60.4204(a), §60.4205(a), or §60.4205(c).

Alternatively, stationary CI ICE that are complying with the emission standards for pre-2007 model year engines in §60.4204(a), §60.4205(a), or §60.4205(c) may follow the testing procedures specified in §60.4213, as appropriate.

(e) Exhaust emissions from stationary CI ICE that are complying with the emission standards for new CI engines in 40 CFR part 1042 must not exceed the NTE standards for the same model year and maximum engine power as required in 40 CFR 1042.101(c).

§60.4213 What test methods and other procedures must I use if I am an owner or operator of a stationary CI internal combustion engine with a displacement of greater than or equal to 30 liters per cylinder?

Owners and operators of stationary CI ICE with a displacement of greater than or equal to 30 liters per cylinder must conduct performance tests according to paragraphs (a) through (f) of this section.

(a) Each performance test must be conducted according to the requirements in §60.8 and under the specific conditions that this subpart specifies in table 7. The test must be conducted within 10 percent of 100 percent peak (or the highest achievable) load.

(b) You may not conduct performance tests during periods of startup, shutdown, or malfunction, as specified in §60.8(c).

(c) You must conduct three separate test runs for each performance test required in this section, as specified in §60.8(f). Each test run must last at least 1 hour.

(d) To determine compliance with the percent reduction requirement, you must follow the requirements as specified in paragraphs (d)(1) through (3) of this section.

(1) You must use Equation 2 of this section to determine compliance with the percent reduction requirement:

$$\frac{C_i - C_o}{C_i} \times 100 = R \qquad \text{(Eq. 2)}$$

Where:

C_i = concentration of NO_X or PM at the control device inlet,

C_o = concentration of NO_X or PM at the control device outlet, and

R = percent reduction of NO_X or PM emissions.

(2) You must normalize the NO_X or PM concentrations at the inlet and outlet of the control device to a dry basis and to 15 percent oxygen (O_2) using Equation 3 of this section, or an equivalent percent carbon dioxide (CO_2) using the procedures described in paragraph (d)(3) of this section.

$$C_{adj} = C_d \frac{5.9}{20.9 - \%\,O_2} \qquad \text{(Eq. 3)}$$

Where:

C_{adj} = Calculated NO_X or PM concentration adjusted to 15 percent O_2.

C_d = Measured concentration of NO_X or PM, uncorrected.

5.9 = 20.9 percent O_2−15 percent O_2, the defined O_2 correction value, percent.

$\%O_2$ = Measured O_2 concentration, dry basis, percent.

(3) If pollutant concentrations are to be corrected to 15 percent O_2 and CO_2 concentration is measured in lieu of O_2 concentration measurement, a CO_2 correction factor is needed. Calculate the CO_2 correction factor as described in paragraphs (d)(3)(i) through (iii) of this section.

(i) Calculate the fuel-specific F_o value for the fuel burned during the test using values obtained from Method 19, Section 5.2, and the following equation:

$$F_o = \frac{0.209_{F_d}}{F_c} \qquad \text{(Eq. 4)}$$

Where:

F_o = Fuel factor based on the ratio of O_2 volume to the ultimate CO_2 volume produced by the fuel at zero percent excess air.

0.209 = Fraction of air that is O_2, percent/100.

F_d = Ratio of the volume of dry effluent gas to the gross calorific value of the fuel from Method 19, dsm3/J (dscf/106 Btu).

F_c = Ratio of the volume of CO_2 produced to the gross calorific value of the fuel from Method 19, dsm3/J (dscf/106 Btu).

(ii) Calculate the CO_2 correction factor for correcting measurement data to 15 percent O_2, as follows:

$$X_{co_2} = \frac{5.9}{F_o} \qquad \text{(Eq. 5)}$$

Where:

X_{CO2} = CO_2 correction factor, percent.

5.9 = 20.9 percent O_2−15 percent O_2, the defined O_2 correction value, percent.

(iii) Calculate the NO_X and PM gas concentrations adjusted to 15 percent O_2 using CO_2 as follows:

$$C_{adj} = C_d \frac{X_{co_2}}{\%CO_2} \qquad \text{(Eq. 6)}$$

Where:

C_{adj} = Calculated NO_X or PM concentration adjusted to 15 percent O_2.

C_d = Measured concentration of NO_X or PM, uncorrected.

$\%CO_2$ = Measured CO_2 concentration, dry basis, percent.

(e) To determine compliance with the NO_X mass per unit output emission limitation, convert the concentration of NO_X in the engine exhaust using Equation 7 of this section:

$$ER = \frac{C_d \times 1.912 \times 10^{-3} \times Q \times T}{KW\text{-hour}} \qquad \text{(Eq. 7)}$$

Where:

ER = Emission rate in grams per KW-hour.

C_d = Measured NO_X concentration in ppm.

$1.912x10^{-3}$ = Conversion constant for ppm NO_X to grams per standard cubic meter at 25 degrees Celsius.

Q = Stack gas volumetric flow rate, in standard cubic meter per hour.

T = Time of test run, in hours.

KW-hour = Brake work of the engine, in KW-hour.

(f) To determine compliance with the PM mass per unit output emission limitation, convert the concentration of PM in the engine exhaust using Equation 8 of this section:

$$ER = \frac{C_{adj} \times Q \times T}{KW\text{-}hour} \quad (Eq. 8)$$

Where:

ER = Emission rate in grams per KW-hour.

C_{adj} = Calculated PM concentration in grams per standard cubic meter.

Q = Stack gas volumetric flow rate, in standard cubic meter per hour.

T = Time of test run, in hours.

KW-hour = Energy output of the engine, in KW.

Notification, Reports, and Records for Owners and Operators

§60.4214 What are my notification, reporting, and recordkeeping requirements if I am an owner or operator of a stationary CI internal combustion engine?

(a) Owners and operators of non-emergency stationary CI ICE that are greater than 2,237 KW (3,000 HP), or have a displacement of greater than or equal to 10 liters per cylinder, or are pre-2007 model year engines that are greater than 130 KW (175 HP) and not certified, must meet the requirements of paragraphs (a)(1) and (2) of this section.

(1) Submit an initial notification as required in §60.7(a)(1). The notification must include the information in paragraphs (a)(1)(i) through (v) of this section.

(i) Name and address of the owner or operator;

(ii) The address of the affected source;

(iii) Engine information including make, model, engine family, serial number, model year, maximum engine power, and engine displacement;

(iv) Emission control equipment; and

(v) Fuel used.

(2) Keep records of the information in paragraphs (a)(2)(i) through (iv) of this section.

(i) All notifications submitted to comply with this subpart and all documentation supporting any notification.

(ii) Maintenance conducted on the engine.

(iii) If the stationary CI internal combustion is a certified engine, documentation from the manufacturer that the engine is certified to meet the emission standards.

(iv) If the stationary CI internal combustion is not a certified engine, documentation that the engine meets the emission standards.

(b) If the stationary CI internal combustion engine is an emergency stationary internal combustion engine, the owner or operator is not required to submit an initial notification. Starting with the model years in table 5 to this subpart, if the emergency engine does not meet the standards applicable to non-emergency engines in the applicable model year, the owner or operator must keep records of the operation of the engine in emergency and non-emergency service that are recorded through the non-resettable hour meter. The owner must record thetime of operation of the engine and the reason the engine was in operation during that time.

(c) If the stationary CI internal combustion engine is equipped with a diesel particulate filter, the owner or operator must keep records of any corrective action taken after the backpressure monitor has notified the owner or operator that the high backpressure limit of the engine is approached.

(d) If you own or operate an emergency stationary CI ICE with a maximum engine power more than 100 HP that operates or is contractually obligated to be available for more than 15 hours per calendar year for the purposes specified in §60.4211(f)(2)(ii) and (iii) or that operates for the purposes specified in §60.4211(f)(3)(i), you must submit an annual report according to the requirements in paragraphs (d)(1) through (3) of this section.

(1) The report must contain the following information:

(i) Company name and address where the engine is located.

(ii) Date of the report and beginning and ending dates of the reporting period.

(iii) Engine site rating and model year.

(iv) Latitude and longitude of the engine in decimal degrees reported to the fifth decimal place.

(v) Hours operated for the purposes specified in §60.4211(f)(2)(ii) and (iii), including the date, start time, and end time for engine operation for the purposes specified in §60.4211(f)(2)(ii) and (iii).

(vi) Number of hours the engine is contractually obligated to be available for the purposes specified in §60.4211(f)(2)(ii) and (iii).

(vii) Hours spent for operation for the purposes specified in §60.4211(f)(3)(i), including the date, start time, and end time for engine operation for the purposes specified in §60.4211(f)(3)(i). The reportmust also identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine.

(2) The first annual report must cover the calendar year 2015 and must be submitted no later than March 31, 2016. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

(3) The annual report must be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to this subpart is not available in CEDRI at the time that the report is due, the written report must be submitted to the Administrator at the appropriate address listed in §60.4.

(e) Owners or operators of stationary CI ICE equipped with AECDs pursuant to the requirements of 40 CFR 1039.665 must report the use of AECDs as required by 40 CFR 1039.665(e).

Special Requirements

§60.4215 What requirements must I meet for engines used in Guam, American Samoa, or the Commonwealth of the Northern Mariana Islands?

(a) Stationary CI ICE with a displacement of less than 30 liters per cylinder that are used in Guam, American Samoa, or the Commonwealth of the Northern Mariana Islands are required to meet the applicable emission standards in §§60.4202 and 60.4205.

(b) Stationary CI ICE that are used in Guam, American Samoa, or the Commonwealth of the Northern Mariana Islands are not required to meet the fuel requirements in §60.4207.

(c) Stationary CI ICE with a displacement of greater than or equal to 30 liters per cylinder that are used in Guam, American Samoa, or the Commonwealth of the Northern Mariana Islands are required to meet the following emission standards:

(1) For engines installed prior to January 1, 2012, limit the emissions of NO_X in the stationary CI internal combustion engine exhaust to the following:

(i) 17.0 g/KW-hr (12.7 g/HP-hr) when maximum engine speed is less than 130 rpm;

(ii) $45 \cdot n^{-0.2}$ g/KW-hr ($34 \cdot n^{-0.2}$ g/HP-hr) when maximum engine speed is 130 or more but less than 2,000 rpm, where n is maximum engine speed; and

(iii) 9.8 g/KW-hr (7.3 g/HP-hr) when maximum engine speed is 2,000 rpm or more.

(2) For engines installed on or after January 1, 2012, limit the emissions of NO_X in the stationary CI internal combustion engine exhaust to the following:

(i) 14.4 g/KW-hr (10.7 g/HP-hr) when maximum engine speed is less than 130 rpm;

(ii) $44 \cdot n^{-0.23}$ g/KW-hr ($33 \cdot n^{-0.23}$ g/HP-hr) when maximum engine speed is greater than or equal to 130 but less than 2,000 rpm and where n is maximum engine speed; and

(iii) 7.7 g/KW-hr (5.7 g/HP-hr) when maximum engine speed is greater than or equal to 2,000 rpm.

(3) Limit the emissions of PM in the stationary CI internal combustion engine exhaust to 0.40 g/KW-hr (0.30 g/HP-hr).

§60.4216 What requirements must I meet for engines used in Alaska?

(a) Prior to December 1, 2010, owners and operators of stationary CI ICE with a displacement of less than 30 liters per cylinder located in areas of Alaska not accessible by the FAHS should refer to 40 CFR part 69 to determine the diesel fuel requirements applicable to such engines.

(b) Except as indicated in paragraph (c) of this section, manufacturers, owners and operators of stationary CI ICE with a displacement of less than 10 liters per cylinder located in remote areas of Alaska may meet the requirements of this subpart by manufacturing and installing engines meeting the requirements of 40 CFR parts 94 or 1042, as appropriate, rather than the otherwise applicable requirements of 40 CFR parts 89 and 1039, as indicated in §§60.4201(f) and 60.4202(g).

(c) Manufacturers, owners and operators of stationary CI ICE that are located in remote areas of Alaska may choose to meet the applicable emission standards for emergency engines in §§60.4202 and 60.4205, and not those for non-emergency engines in §§60.4201 and 60.4204, except that for 2014 model year and later non-emergency CI ICE, the owner or operator of any such engine that was not certified as meeting Tier 4 PM standards, must meet the applicable requirements for PM in §§60.4201 and 60.4204 or install a PM emission control device that achieves

PM emission reductions of 85 percent, or 60 percent for engines with a displacement of greater than or equal to 30 liters per cylinder, compared to engine-out emissions.

(d) The provisions of §60.4207 do not apply to owners and operators of pre-2014 model year stationary CI ICE subject to this subpart that are located in remote areas of Alaska.

(e) The provisions of §60.4208(a) do not apply to owners and operators of stationary CI ICE subject to this subpart that are located in areas of Alaska not accessible by the FAHS until after December 31, 2009.

(f) The provisions of this section and §60.4207 do not prevent owners and operators of stationary CI ICE subject to this subpart that are located in remote areas of Alaska from using fuels mixed with used lubricating oil, in volumes of up to 1.75 percent of the total fuel. The sulfur content of the used lubricating oil must be less than 200 parts per million. The used lubricating oil must meet the on-specification levels and properties for used oil in 40 CFR 279.11.

§60.4217 What emission standards must I meet if I am an owner or operator of a stationary internal combustion engine using special fuels?

Owners and operators of stationary CI ICE that do not use diesel fuel may petition the Administrator for approval of alternative emission standards, if they can demonstrate that they use a fuel that is not the fuel on which the manufacturer of the engine certified the engine and that the engine cannot meet the applicable standards required in §60.4204 or §60.4205 using such fuels and that use of such fuel is appropriate and reasonably necessary, considering cost, energy, technical feasibility, human health and environmental, and other factors, for the operation of the engine.

General Provisions

§60.4218 What parts of the General Provisions apply to me?

Table 8 to this subpart shows which parts of the General Provisions in §§60.1 through 60.19 apply to you.

Definitions

§60.4219 What definitions apply to this subpart?

As used in this subpart, all terms not defined herein shall have the meaning given them in the CAA and in subpart A of this part.

Alaska Railbelt Grid means the service areas of the six regulated public utilities that extend from Fairbanks to Anchorage and the Kenai Peninsula. These utilities are Golden Valley Electric Association; Chugach Electric Association; Matanuska Electric Association; Homer Electric Association; Anchorage Municipal Light & Power; and the City of Seward Electric System.

Certified emissions life means the period during which the engine is designed to properly function in terms of reliability and fuel consumption, without being remanufactured, specified as a number of hours of operation or calendar years, whichever comes first. The values for certified emissions life for stationary CI ICE with a displacement of less than 10 liters per cylinder are given in 40 CFR 1039.101(g). The values for certified emissions life for stationary CI ICE with a displacement of greater than or equal to 10 liters per cylinder and less than 30 liters per cylinder are given in 40 CFR 94.9(a).

Combustion turbine means all equipment, including but not limited to the turbine, the fuel, air, lubrication and exhaust gas systems, control systems (except emissions control equipment), and any ancillary components and sub-

components comprising any simple cycle combustion turbine, any regenerative/recuperative cycle combustion turbine, the combustion turbine portion of any cogeneration cycle combustion system, or the combustion turbine portion of any combined cycle steam/electric generating system.

Compression ignition means relating to a type of stationary internal combustion engine that is not a spark ignition engine.

Date of manufacture means one of the following things:

(1) For freshly manufactured engines and modified engines, date of manufacture means the date the engine is originally produced.

(2) For reconstructed engines, date of manufacture means the date the engine was originally produced, except as specified in paragraph (3) of this definition.

(3) Reconstructed engines are assigned a new date of manufacture if the fixed capital cost of the new and refurbished components exceeds 75 percent of the fixed capital cost of a comparable entirely new facility. An engine that is produced from a previously used engine block does not retain the date of manufacture of the engine in which the engine block was previously used if the engine is produced using all new components except for the engine block. In these cases, the date of manufacture is the date of reconstruction or the date the new engine is produced.

Diesel fuel means any liquid obtained from the distillation of petroleum with a boiling point of approximately 150 to 360 degrees Celsius. One commonly used form is number 2 distillate oil.

Diesel particulate filter means an emission control technology that reduces PM emissions by trapping the particles in a flow filter substrate and periodically removes the collected particles by either physical action or by oxidizing (burning off) the particles in a process called regeneration.

Emergency stationary internal combustion engine means any stationary reciprocating internal combustion engine that meets all of the criteria in paragraphs (1) through (3) of this definition. All emergency stationary ICE must comply with the requirements specified in §60.4211(f) in order to be considered emergency stationary ICE. If the engine does not comply with the requirements specified in §60.4211(f), then it is not considered to be an emergency stationary ICE under this subpart.

(1) The stationary ICE is operated to provide electrical power or mechanical work during an emergency situation. Examples include stationary ICE used to produce power for critical networks or equipment (including power supplied to portions of a facility) when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or stationary ICE used to pump water in the case of fire or flood, etc.

(2) The stationary ICE is operated under limited circumstances for situations not included in paragraph (1) of this definition, as specified in §60.4211(f).

(3) The stationary ICE operates as part of a financial arrangement with another entity in situations not included in paragraph (1) of this definition only as allowed in §60.4211(f)(2)(ii) or (iii) and §60.4211(f)(3)(i).

Engine manufacturer means the manufacturer of the engine. See the definition of "manufacturer" in this section.

Fire pump engine means an emergency stationary internal combustion engine certified to NFPA requirements that is used to provide power to pump water for fire suppression or protection.

Freshly manufactured engine means an engine that has not been placed into service. An engine becomes freshly manufactured when it is originally produced.

Installed means the engine is placed and secured at the location where it is intended to be operated.

Manufacturer has the meaning given in section 216(1) of the Act. In general, this term includes any person who manufactures a stationary engine for sale in the United States or otherwise introduces a new stationary engine into commerce in the United States. This includes importers who import stationary engines for sale or resale.

Maximum engine power means maximum engine power as defined in 40 CFR 1039.801.

Model year means the calendar year in which an engine is manufactured (see "date of manufacture"), except as follows:

(1) Model year means the annual new model production period of the engine manufacturer in which an engine is manufactured (see "date of manufacture"), if the annual new model production period is different than the calendar year and includes January 1 of the calendar year for which the model year is named. It may not begin before January 2 of the previous calendar year and it must end by December 31 of the named calendar year.

(2) For an engine that is converted to a stationary engine after being placed into service as a nonroad or other non-stationary engine, model year means the calendar year or new model production period in which the engine was manufactured (see "date of manufacture").

Other internal combustion engine means any internal combustion engine, except combustion turbines, which is not a reciprocating internal combustion engine or rotary internal combustion engine.

Reciprocating internal combustion engine means any internal combustion engine which uses reciprocating motion to convert heat energy into mechanical work.

Remote areas of Alaska means areas of Alaska that meet either paragraph (1) or (2) of this definition.

(1) Areas of Alaska that are not accessible by the Federal Aid Highway System (FAHS).

(2) Areas of Alaska that meet all of the following criteria:

(i) The only connection to the FAHS is through the Alaska Marine Highway System, or the stationary CI ICE operation is within an isolated grid in Alaska that is not connected to the statewide electrical grid referred to as the Alaska Railbelt Grid.

(ii) At least 10 percent of the power generated by the stationary CI ICE on an annual basis is used for residential purposes.

(iii) The generating capacity of the source is less than 12 megawatts, or the stationary CI ICE is used exclusively for backup power for renewable energy.

Rotary internal combustion engine means any internal combustion engine which uses rotary motion to convert heat energy into mechanical work.

Spark ignition means relating to a gasoline, natural gas, or liquefied petroleum gas fueled engine or any other type of engine with a spark plug (or other sparking device) and with operating characteristics significantly similar to the theoretical Otto combustion cycle. Spark ignition engines usually use a throttle to regulate intake air flow to control power during normal operation. Dual-fuel engines in which a liquid fuel (typically diesel fuel) is used for CI and gaseous fuel (typically natural gas) is used as the primary fuel at an annual average ratio of less than 2 parts diesel fuel to 100 parts total fuel on an energy equivalent basis are spark ignition engines.

Stationary internal combustion engine means any internal combustion engine, except combustion turbines, that converts heat energy into mechanical work and is not mobile. Stationary ICE differ from mobile ICE in that a stationary internal combustion engine is not a nonroad engine as defined at 40 CFR 1068.30 (excluding paragraph (2)(ii) of that definition), and is not used to propel a motor vehicle, aircraft, or a vehicle used solely for competition. Stationary ICE include reciprocating ICE, rotary ICE, and other ICE, except combustion turbines.

Subpart means 40 CFR part 60, subpart IIII.

Table 1 to Subpart IIII of Part 60—Emission Standards for Stationary Pre-2007 Model Year Engines With a Displacement of <10 Liters per Cylinder and 2007-2010 Model Year Engines >2,237 KW (3,000 HP) and With a Displacement of <10 Liters per Cylinder

[As stated in §§60.4201(b), 60.4202(b), 60.4204(a), and 60.4205(a), you must comply with the following emission standards]

Maximum engine power	Emission standards for stationary pre-2007 model year engines with a displacement of <10 liters per cylinder and 2007-2010 model year engines >2,237 KW (3,000 HP) and with a displacement of <10 liters per cylinder in g/KW-hr (g/HP-hr)				
	NMHC + NO_X	**HC**	**NO_X**	**CO**	**PM**
KW<8 (HP<11)	10.5 (7.8)			8.0 (6.0)	1.0 (0.75)
8≤KW<19 (11≤HP<25)	9.5 (7.1)			6.6 (4.9)	0.80 (0.60)
19≤KW<37 (25≤HP<50)	9.5 (7.1)			5.5 (4.1)	0.80 (0.60)
37≤KW<56 (50≤HP<75)			9.2 (6.9)		
56≤KW<75 (75≤HP<100)			9.2 (6.9)		
75≤KW<130 (100≤HP<175)			9.2 (6.9)		
130≤KW<225 (175≤HP<300)		1.3 (1.0)	9.2 (6.9)	11.4 (8.5)	0.54 (0.40)
225≤KW<450 (300≤HP<600)		1.3 (1.0)	9.2 (6.9)	11.4 (8.5)	0.54 (0.40)
450≤KW≤560 (600≤HP≤750)		1.3 (1.0)	9.2 (6.9)	11.4 (8.5)	0.54 (0.40)
KW>560 (HP>750)		1.3 (1.0)	9.2 (6.9)	11.4 (8.5)	0.54 (0.40)

Table 2 to Subpart IIII of Part 60—Emission Standards for 2008 Model Year and Later Emergency Stationary CI ICE <37 KW (50 HP) With a Displacement of <10 Liters per Cylinder

[As stated in §60.4202(a)(1), you must comply with the following emission standards]

Engine power	Emission standards for 2008 model year and later emergency stationary CI ICE <37 KW (50 HP) with a displacement of <10 liters per cylinder in g/KW-hr (g/HP-hr)

	Model year(s)	NO_X + NMHC	CO	PM
KW<8 (HP<11)	2008 +	7.5 (5.6)	8.0 (6.0)	0.40 (0.30)
8≤KW<19 (11≤HP<25)	2008 +	7.5 (5.6)	6.6 (4.9)	0.40 (0.30)
19≤KW<37 (25≤HP<50)	2008 +	7.5 (5.6)	5.5 (4.1)	0.30 (0.22)

Table 3 to Subpart IIII of Part 60—Certification Requirements for Stationary Fire Pump Engines

As stated in §60.4202(d), you must certify new stationary fire pump engines beginning with the following model years:

Engine power	Starting model year engine manufacturers must certify new stationary fire pump engines according to §60.4202(d)[1]
KW<75 (HP<100)	2011
75≤KW<130 (100≤HP<175)	2010
130≤KW≤560 (175≤HP≤750)	2009
KW>560 (HP>750)	2008

[1]Manufacturers of fire pump stationary CI ICE with a maximum engine power greater than or equal to 37 kW (50 HP) and less than 450 KW (600 HP) and a rated speed of greater than 2,650 revolutions per minute (rpm) are not required to certify such engines until three model years following the model year indicated in this Table 3 for engines in the applicable engine power category.

Table 4 to Subpart IIII of Part 60—Emission Standards for Stationary Fire Pump Engines

[As stated in §§60.4202(d) and 60.4205(c), you must comply with the following emission standards for stationary fire pump engines]

Maximum engine power	Model year(s)	NMHC + NO_X	CO	PM
KW<8 (HP<11)	2010 and earlier	10.5 (7.8)	8.0 (6.0)	1.0 (0.75)
	2011 +	7.5 (5.6)		0.40 (0.30)
8≤KW<19 (11≤HP<25)	2010 and earlier	9.5 (7.1)	6.6 (4.9)	0.80 (0.60)
	2011 +	7.5 (5.6)		0.40 (0.30)
19≤KW<37 (25≤HP<50)	2010 and earlier	9.5 (7.1)	5.5 (4.1)	0.80 (0.60)
	2011 +	7.5 (5.6)		0.30 (0.22)
37≤KW<56 (50≤HP<75)	2010 and earlier	10.5 (7.8)	5.0 (3.7)	0.80 (0.60)
	2011 +[1]	4.7 (3.5)		0.40 (0.30)
56≤KW<75 (75≤HP<100)	2010 and earlier	10.5 (7.8)	5.0 (3.7)	0.80 (0.60)
	2011 +[1]	4.7 (3.5)		0.40 (0.30)
75≤KW<130 (100≤HP<175)	2009 and earlier	10.5 (7.8)	5.0 (3.7)	0.80 (0.60)
	2010 +[2]	4.0 (3.0)		0.30 (0.22)
130≤KW<225 (175≤HP<300)	2008 and earlier	10.5 (7.8)	3.5 (2.6)	0.54 (0.40)
	2009 +[3]	4.0 (3.0)		0.20 (0.15)
225≤KW<450 (300≤HP<600)	2008 and earlier	10.5 (7.8)	3.5 (2.6)	0.54 (0.40)
	2009 +[3]	4.0 (3.0)		0.20 (0.15)
450≤KW≤560 (600≤HP≤750)	2008 and earlier	10.5 (7.8)	3.5 (2.6)	0.54 (0.40)
	2009 +	4.0 (3.0)		0.20 (0.15)
KW>560 (HP>750)	2007 and earlier	10.5 (7.8)	3.5 (2.6)	0.54 (0.40)
	2008 +	6.4 (4.8)		0.20 (0.15)

[1]For model years 2011-2013, manufacturers, owners and operators of fire pump stationary CI ICE in this engine power category with a rated speed of greater than 2,650 revolutions per minute (rpm) may comply with the emission limitations for 2010 model year engines.

[2]For model years 2010-2012, manufacturers, owners and operators of fire pump stationary CI ICE in this engine power category with a rated speed of greater than 2,650 rpm may comply with the emission limitations for 2009 model year engines.

[3]In model years 2009-2011, manufacturers of fire pump stationary CI ICE in this engine power category with a rated speed of greater than 2,650 rpm may comply with the emission limitations for 2008 model year engines.

Table 5 to Subpart IIII of Part 60—Labeling and Recordkeeping Requirements for New Stationary Emergency Engines

[You must comply with the labeling requirements in §60.4210(f) and the recordkeeping requirements in §60.4214(b) for new emergency stationary CI ICE beginning in the following model years:]

Engine power	Starting model year
19≤KW<56 (25≤HP<75)	2013
56≤KW<130 (75≤HP<175)	2012
KW≥130 (HP≥175)	2011

Table 6 to Subpart IIII of Part 60—Optional 3-Mode Test Cycle for Stationary Fire Pump Engines

[As stated in §60.4210(g), manufacturers of fire pump engines may use the following test cycle for testing fire pump engines:]

Mode No.	Engine speed[1]	Torque (percent)[2]	Weighting factors
1	Rated	100	0.30
2	Rated	75	0.50
3	Rated	50	0.20

[1]Engine speed: ±2 percent of point.

[2]Torque: NFPA certified nameplate HP for 100 percent point. All points should be ±2 percent of engine percent load value.

Table 7 to Subpart IIII of Part 60—Requirements for Performance Tests for Stationary CI ICE With a Displacement of ≥30 Liters per Cylinder

As stated in §60.4213, you must comply with the following requirements for performance tests for stationary CI ICE with a displacement of ≥30 liters per cylinder:

Each	Complying with the requirement to	You must	Using	According to the following requirements
1. Stationary CI internal combustion engine with a displacement of	a. Reduce NO_X emissions by 90 percent or more;	i. Select the sampling port location and number/location of traverse points at the inlet and outlet of the control device;		(a) For NO_X, O_2, and moisture measurement, ducts ≤6 inches in diameter may be sampled at a single point located at the duct centroid and ducts >6 and ≤12 inches in diameter may be

Each	Complying with the requirement to	You must	Using	According to the following requirements
≥ 30 liters per cylinder				sampled at 3 traverse points located at 16.7, 50.0, and 83.3% of the measurement line ('3-point long line'). If the duct is >12 inches in diameter and the sampling port location meets the two and half-diameter criterion of Section 11.1.1 of Method 1 of 40 CFR part 60, appendix A-1, the duct may be sampled at '3-point long line'; otherwise, conduct the stratification testing and select sampling points according to Section 8.1.2 of Method 7E of 40 CFR part 60, appendix A-4.
		ii. Measure O_2 at the inlet and outlet of the control device;	(1) Method 3, 3A, or 3B of 40 CFR part 60, appendix A-2	(b) Measurements to determine O_2 concentration must be made at the same time as the measurements for NO_X concentration.
		iii. If necessary, measure moisture content at the inlet and outlet of the control device; and	(2) Method 4 of 40 CFR part 60, appendix A-3, Method 320 of 40 CFR part 63, appendix A, or ASTM D 6348-03 (incorporated by reference, see §60.17)	(c) Measurements to determine moisture content must be made at the same time as the measurements for NO_X concentration.
		iv. Measure NO_X at the inlet and outlet of the control device.	(3) Method 7E of 40 CFR part 60, appendix A-4, Method 320 of 40 CFR part 63, appendix A, or ASTM D 6348-03 (incorporated by reference, see §60.17)	(d) NO_X concentration must be at 15 percent O_2, dry basis. Results of this test consist of the average of the three 1-hour or longer runs.

Each	Complying with the requirement to	You must	Using	According to the following requirements
	b. Limit the concentration of NO_x in the stationary CI internal combustion engine exhaust.	i. Select the sampling port location and number/location of traverse points at the exhaust of the stationary internal combustion engine;		(a) For NO_x, O_2, and moisture measurement, ducts ≤6 inches in diameter may be sampled at a single point located at the duct centroid and ducts >6 and ≤12 inches in diameter may be sampled at 3 traverse points located at 16.7, 50.0, and 83.3% of the measurement line ('3-point long line'). If the duct is >12 inches in diameter and the sampling port location meets the two and half-diameter criterion of Section 11.1.1 of Method 1 of 40 CFR part 60, appendix A-1, the duct may be sampled at '3-point long line'; otherwise, conduct the stratification testing and select sampling points according to Section 8.1.2 of Method 7E of 40 CFR part 60, appendix A-4.
		ii. Determine the O_2 concentration of the stationary internal combustion engine exhaust at the sampling port location;	(1) Method 3, 3A, or 3B of 40 CFR part 60, appendix A-2	(b) Measurements to determine O_2 concentration must be made at the same time as the measurement for NO_x concentration.
		iii. If necessary, measure moisture content of the stationary internal combustion engine exhaust at the sampling port location; and	(2) Method 4 of 40 CFR part 60, appendix A-3, Method 320 of 40 CFR part 63, appendix A, or ASTM D 6348-03 (incorporated by reference, see §60.17)	(c) Measurements to determine moisture content must be made at the same time as the measurement for NO_x concentration.
		iv. Measure NO_x at the exhaust of the stationary internal combustion engine; if using a control device, the sampling site	(3) Method 7E of 40 CFR part 60, appendix A-4, Method 320 of 40 CFR part 63,	(d) NO_x concentration must be at 15 percent O_2, dry basis. Results of this test consist of the average

Each	Complying with the requirement to	You must	Using	According to the following requirements
		must be located at the outlet of the control device.	appendix A, or ASTM D 6348-03 (incorporated by reference, see §60.17)	of the three 1-hour or longer runs.
	c. Reduce PM emissions by 60 percent or more	i. Select the sampling port location and the number of traverse points;	(1) Method 1 or 1A of 40 CFR part 60, appendix A-1	(a) Sampling sites must be located at the inlet and outlet of the control device.
		ii. Measure O_2 at the inlet and outlet of the control device;	(2) Method 3, 3A, or 3B of 40 CFR part 60, appendix A-2	(b) Measurements to determine O_2 concentration must be made at the same time as the measurements for PM concentration.
		iii. If necessary, measure moisture content at the inlet and outlet of the control device; and	(3) Method 4 of 40 CFR part 60, appendix A-3	(c) Measurements to determine and moisture content must be made at the same time as the measurements for PM concentration.
		iv. Measure PM at the inlet and outlet of the control device.	(4) Method 5 of 40 CFR part 60, appendix A-3	(d) PM concentration must be at 15 percent O_2, dry basis. Results of this test consist of the average of the three 1-hour or longer runs.
	d. Limit the concentration of PM in the stationary CI internal combustion engine exhaust	i. Select the sampling port location and the number of traverse points;	(1) Method 1 or 1A of 40 CFR part 60, appendix A-1	(a) If using a control device, the sampling site must be located at the outlet of the control device.
		ii. Determine the O_2 concentration of the stationary internal combustion engine exhaust at the sampling port location;	(2) Method 3, 3A, or 3B of 40 CFR part 60, appendix A-2	(b) Measurements to determine O_2 concentration must be made at the same time as the measurements for PM concentration.

Each	Complying with the requirement to	You must	Using	According to the following requirements
		iii. If necessary, measure moisture content of the stationary internal combustion engine exhaust at the sampling port location; and	(3) Method 4 of 40 CFR part 60, appendix A-3	(c) Measurements to determine moisture content must be made at the same time as the measurements for PM concentration.
		iv. Measure PM at the exhaust of the stationary internal combustion engine.	(4) Method 5 of 40 CFR part 60, appendix A-3	(d) PM concentration must be at 15 percent O_2, dry basis. Results of this test consist of the average of the three 1-hour or longer runs.

Table 8 to Subpart IIII of Part 60—Applicability of General Provisions to Subpart IIII

[As stated in §60.4218, you must comply with the following applicable General Provisions:]

General Provisions citation	Subject of citation	Applies to subpart	Explanation
§60.1	General applicability of the General Provisions	Yes	
§60.2	Definitions	Yes	Additional terms defined in §60.4219.
§60.3	Units and abbreviations	Yes	
§60.4	Address	Yes	
§60.5	Determination of construction or modification	Yes	
§60.6	Review of plans	Yes	
§60.7	Notification and Recordkeeping	Yes	Except that §60.7 only applies as specified in §60.4214(a).
§60.8	Performance tests	Yes	Except that §60.8 only applies to stationary CI ICE with a displacement of (≥30 liters per cylinder and engines that are not certified.
§60.9	Availability of information	Yes	
§60.10	State Authority	Yes	

General Provisions citation	Subject of citation	Applies to subpart	Explanation
§60.11	Compliance with standards and maintenance requirements	No	Requirements are specified in subpart IIII.
§60.12	Circumvention	Yes	
§60.13	Monitoring requirements	Yes	Except that §60.13 only applies to stationary CI ICE with a displacement of (≥30 liters per cylinder.
§60.14	Modification	Yes	
§60.15	Reconstruction	Yes	
§60.16	Priority list	Yes	
§60.17	Incorporations by reference	Yes	
§60.18	General control device requirements	No	
§60.19	General notification and reporting requirements	Yes	

Appendix K. 40 CFR pt. 60, subp. A – General Provisions

§60.1 Applicability.

(a) Except as provided in subparts B and C, the provisions of this part apply to the owner or operator of any stationary source which contains an affected facility, the construction or modification of which is commenced after the date of publication in this part of any standard (or, if earlier, the date of publication of any proposed standard) applicable to that facility.

(b) Any new or revised standard of performance promulgated pursuant to section 111(b) of the Act shall apply to the owner or operator of any stationary source which contains an affected facility, the construction or modification of which is commenced after the date of publication in this part of such new or revised standard (or, if earlier, the date of publication of any proposed standard) applicable to that facility.

(c) In addition to complying with the provisions of this part, the owner or operator of an affected facility may be required to obtain an operating permit issued to stationary sources by an authorized State air pollution control agency or by the Administrator of the U.S. Environmental Protection Agency (EPA) pursuant to Title V of the Clean Air Act (Act) as amended November 15, 1990 (42 U.S.C. 7661). For more information about obtaining an operating permit see part 70 of this chapter.

(d) Site-specific standard for Merck & Co., Inc.'s Stonewall Plant in Elkton, Virginia.

(1) This paragraph applies only to the pharmaceutical manufacturing facility, commonly referred to as the Stonewall Plant, located at Route 340 South, in Elkton, Virginia ("site").

(2) Except for compliance with 40 CFR 60.49b(u), the site shall have the option of either complying directly with the requirements of this part, or reducing the site-wide emissions caps in accordance with the procedures set forth in a permit issued pursuant to 40 CFR 52.2454. If the site chooses the option of reducing the site-wide emissions caps in accordance with the procedures set forth in such permit, the requirements of such permit shall apply in lieu of the otherwise applicable requirements of this part.

(3) Notwithstanding the provisions of paragraph (d)(2) of this section, for any provisions of this part except for Subpart Kb, the owner/operator of the site shall comply with the applicable provisions of this part if the Administrator determines that compliance with the provisions of this part is necessary for achieving the objectives of the regulation and the Administrator notifies the site in accordance with the provisions of the permit issued pursuant to 40 CFR 52.2454.

§60.2 Definitions.

The terms used in this part are defined in the Act or in this section as follows:

Act means the Clean Air Act (42 U.S.C. 7401 *et seq.*)

Administrator means the Administrator of the Environmental Protection Agency or his authorized representative.

Affected facility means, with reference to a stationary source, any apparatus to which a standard is applicable.

Alternative method means any method of sampling and analyzing for an air pollutant which is not a reference or equivalent method but which has been demonstrated to the Administrator's satisfaction to, in specific cases, produce results adequate for his determination of compliance.

Approved permit program means a State permit program approved by the Administrator as meeting the requirements of part 70 of this chapter or a Federal permit program established in this chapter pursuant to Title V of the Act (42 U.S.C. 7661).

Capital expenditure means an expenditure for a physical or operational change to an existing facility which exceeds the product of the applicable "annual asset guideline repair allowance percentage" specified in the latest edition of

Internal Revenue Service (IRS) Publication 534 and the existing facility's basis, as defined by section 1012 of the Internal Revenue Code. However, the total expenditure for a physical or operational change to an existing facility must not be reduced by any "excluded additions" as defined in IRS Publication 534, as would be done for tax purposes.

Clean coal technology demonstration project means a project using funds appropriated under the heading 'Department of Energy-Clean Coal Technology', up to a total amount of $2,500,000,000 for commercial demonstrations of clean coal technology, or similar projects funded through appropriations for the Environmental Protection Agency.

Commenced means, with respect to the definition of *new source* in section 111(a)(2) of the Act, that an owner or operator has undertaken a continuous program of construction or modification or that an owner or operator has entered into a contractual obligation to undertake and complete, within a reasonable time, a continuous program of construction or modification.

Construction means fabrication, erection, or installation of an affected facility.

Continuous monitoring system means the total equipment, required under the emission monitoring sections in applicable subparts, used to sample and condition (if applicable), to analyze, and to provide a permanent record of emissions or process parameters.

Electric utility steam generating unit means any steam electric generating unit that is constructed for the purpose of supplying more than one-third of its potential electric output capacity and more than 25 MW electrical output to any utility power distribution system for sale. Any steam supplied to a steam distribution system for the purpose of providing steam to a steam-electric generator that would produce electrical energy for sale is also considered in determining the electrical energy output capacity of the affected facility.

Equivalent method means any method of sampling and analyzing for an air pollutant which has been demonstrated to the Administrator's satisfaction to have a consistent and quantitatively known relationship to the reference method, under specified conditions.

Excess Emissions and Monitoring Systems Performance Report is a report that must be submitted periodically by a source in order to provide data on its compliance with stated emission limits and operating parameters, and on the performance of its monitoring systems.

Existing facility means, with reference to a stationary source, any apparatus of the type for which a standard is promulgated in this part, and the construction or modification of which was commenced before the date of proposal of that standard; or any apparatus which could be altered in such a way as to be of that type.

Force majeure means, for purposes of §60.8, an event that will be or has been caused by circumstances beyond the control of the affected facility, its contractors, or any entity controlled by the affected facility that prevents the owner or operator from complying with the regulatory requirement to conduct performance tests within the specified timeframe despite the affected facility's best efforts to fulfill the obligation. Examples of such events are acts of nature, acts of war or terrorism, or equipment failure or safety hazard beyond the control of the affected facility.

Isokinetic sampling means sampling in which the linear velocity of the gas entering the sampling nozzle is equal to that of the undisturbed gas stream at the sample point.

Issuance of a part 70 permit will occur, if the State is the permitting authority, in accordance with the requirements of part 70 of this chapter and the applicable, approved State permit program. When the EPA is the permitting authority, issuance of a Title V permit occurs immediately after the EPA takes final action on the final permit.

Malfunction means any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or a process to operate in a normal or usual manner. Failures that are caused in part by poor maintenance or careless operation are not malfunctions.

Modification means any physical change in, or change in the method of operation of, an existing facility which increases the amount of any air pollutant (to which a standard applies) emitted into the atmosphere by that facility or which results in the emission of any air pollutant (to which a standard applies) into the atmosphere not previously emitted.

Monitoring device means the total equipment, required under the monitoring of operations sections in applicable subparts, used to measure and record (if applicable) process parameters.

Nitrogen oxides means all oxides of nitrogen except nitrous oxide, as measured by test methods set forth in this part.

One-hour period means any 60-minute period commencing on the hour.

Opacity means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.

Owner or operator means any person who owns, leases, operates, controls, or supervises an affected facility or a stationary source of which an affected facility is a part.

Part 70 permit means any permit issued, renewed, or revised pursuant to part 70 of this chapter.

Particulate matter means any finely divided solid or liquid material, other than uncombined water, as measured by the reference methods specified under each applicable subpart, or an equivalent or alternative method.

Permit program means a comprehensive State operating permit system established pursuant to title V of the Act (42 U.S.C. 7661) and regulations codified in part 70 of this chapter and applicable State regulations, or a comprehensive Federal operating permit system established pursuant to title V of the Act and regulations codified in this chapter.

Permitting authority means:

(1) The State air pollution control agency, local agency, other State agency, or other agency authorized by the Administrator to carry out a permit program under part 70 of this chapter; or

(2) The Administrator, in the case of EPA-implemented permit programs under title V of the Act (42 U.S.C. 7661).

Proportional sampling means sampling at a rate that produces a constant ratio of sampling rate to stack gas flow rate.

Reactivation of a very clean coal-fired electric utility steam generating unit means any physical change or change in the method of operation associated with the commencement of commercial operations by a coal-fired utility unit after a period of discontinued operation where the unit:

(1) Has not been in operation for the two-year period prior to the enactment of the Clean Air Act Amendments of 1990, and the emissions from such unit continue to be carried in the permitting authority's emissions inventory at the time of enactment;

(2) Was equipped prior to shut-down with a continuous system of emissions control that achieves a removal efficiency for sulfur dioxide of no less than 85 percent and a removal efficiency for particulates of no less than 98 percent;

(3) Is equipped with low-NO_x burners prior to the time of commencement of operations following reactivation; and

(4) Is otherwise in compliance with the requirements of the Clean Air Act.

Reference method means any method of sampling and analyzing for an air pollutant as specified in the applicable subpart.

Repowering means replacement of an existing coal-fired boiler with one of the following clean coal technologies: atmospheric or pressurized fluidized bed combustion, integrated gasification combined cycle, magnetohydrodynamics, direct and indirect coal-fired turbines, integrated gasification fuel cells, or as determined by the Administrator, in consultation with the Secretary of Energy, a derivative of one or more of these technologies, and any other technology capable of controlling multiple combustion emissions simultaneously with improved boiler or generation efficiency and with significantly greater waste reduction relative to the performance of technology in widespread commercial use as of November 15, 1990. Repowering shall also include any oil and/or gas-fired unit which has been awarded clean coal technology demonstration funding as of January 1, 1991, by the Department of Energy.

Run means the net period of time during which an emission sample is collected. Unless otherwise specified, a run may be either intermittent or continuous within the limits of good engineering practice.

Shutdown means the cessation of operation of an affected facility for any purpose.

Six-minute period means any one of the 10 equal parts of a one-hour period.

Standard means a standard of performance proposed or promulgated under this part.

Standard conditions means a temperature of 293 K (68F) and a pressure of 101.3 kilopascals (29.92 in Hg).

Startup means the setting in operation of an affected facility for any purpose.

State means all non-Federal authorities, including local agencies, interstate associations, and State-wide programs, that have delegated authority to implement: (1) The provisions of this part; and/or (2) the permit program established under part 70 of this chapter. The term State shall have its conventional meaning where clear from the context.

Stationary source means any building, structure, facility, or installation which emits or may emit any air pollutant.

Title V permit means any permit issued, renewed, or revised pursuant to Federal or State regulations established to implement title V of the Act (42 U.S.C. 7661). A title V permit issued by a State permitting authority is called a part 70 permit in this part.

Volatile Organic Compound means any organic compound which participates in atmospheric photochemical reactions; or which is measured by a reference method, an equivalent method, an alternative method, or which is determined by procedures specified under any subpart.

§60.3 Units and abbreviations.

Used in this part are abbreviations and symbols of units of measure. These are defined as follows:

(a) System International (SI) units of measure:

A—ampere g—

gram Hz—hertz

J—joule K—

degree Kelvin

kg—kilogram

m—meter

m3—cubic meter mg—
milligram—10^{-3} gram mm—
millimeter—10^{-3} meter Mg—
megagram—106 gram mol—
mole
N—newton ng—nanogram—
10^{-9} gram nm—nanometer—
10^{-9} meter Pa—pascal
s—second
V—volt
W—watt
Ω—ohm
µg—microgram—10^{-6} gram

(b) Other units of measure:

Btu—British thermal unit
°C—degree Celsius (centigrade)
cal—calorie
cfm—cubic feet per minute
cu ft—cubic feet
dcf—dry cubic feet
dcm—dry cubic meter
dscf—dry cubic feet at standard conditions
dscm—dry cubic meter at standard conditions
eq—equivalent
°F—degree Fahrenheit
ft—feet
gal—gallon
gr—grain
g-eq—gram equivalent
hr—hour
in—inch
k—1,000

l—liter

lpm—liter per minute

lb—pound meq—

milliequivalent min—

minute ml—milliliter

mol. wt.—molecular weight

ppb—parts per billion ppm—

parts per million

psia—pounds per square inch absolute

psig—pounds per square inch gage

°R—degree Rankine

scf—cubic feet at standard conditions scfh—

cubic feet per hour at standard conditions

scm—cubic meter at standard conditions sec—

second

sq ft—square feet

std—at standard conditions

(c) Chemical nomenclature:

CdS—cadmium sulfide

CO—carbon monoxide

CO_2—carbon dioxide

HCl—hydrochloric acid

Hg—mercury H_2O—

water H_2S—hydrogen

sulfide H_2SO_4—sulfuric

acid N_2—nitrogen

NO—nitric oxide

NO_2—nitrogen dioxide

NO_X—nitrogen oxides

O_2—oxygen SO_2—

sulfur dioxide

SO_3—sulfur trioxide SO_X—

sulfur oxides

(d) Miscellaneous:

A.S.T.M.—American Society for Testing and Materials

§60.4 Address.

(a) All requests, reports, applications, submittals, and other communications to the Administrator pursuant to this part shall be submitted in duplicate to the appropriate Regional Office of the U.S. Environmental Protection Agency to the attention of the Director of the Division indicated in the following list of EPA Regional Offices.

Region I (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont), Director, Office of Ecosystem Protection, U.S. Environmental Protection Agency, 5 Post Office Square—Suite 100, Boston, MA 02109-3912.

Region II (New Jersey, New York, Puerto Rico, Virgin Islands), Director, Air and Waste Management Division, U.S. Environmental Protection Agency, Federal Office Building, 26 Federal Plaza (Foley Square), New York, NY 10278.

Region III (Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia), Director, Air Protection Division, Mail Code 3AP00, 1650 Arch Street, Philadelphia, PA 19103-2029.

Region IV (Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee), Director, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, 61 Forsyth St. SW., Suite 9T43, Atlanta, Georgia 30303-8960.

Region V (Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin), Director, Air and Radiation Division, U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, IL 60604-3590.

Region VI (Arkansas, Louisiana, New Mexico, Oklahoma, Texas); Director; Air, Pesticides, and Toxics Division; U.S. Environmental Protection Agency, 1445 Ross Avenue, Dallas, TX 75202.

Region VII (Iowa, Kansas, Missouri, Nebraska), Director, Air and Waste Management Division, 11201 Renner Boulevard, Lenexa, Kansas 66219.

Region VIII (Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming) Director, Air and Toxics Technical Enforcement Program, Office of Enforcement, Compliance and Environmental Justice, Mail Code 8ENF-AT, 1595 Wynkoop Street, Denver, CO 80202-1129.

Region IX (Arizona, California, Hawaii and Nevada; the territories of American Samoa and Guam; the Commonwealth of the Northern Mariana Islands; the territories of Baker Island, Howland Island, Jarvis Island, Johnston Atoll, Kingman Reef, Midway Atoll, Palmyra Atoll, and Wake Islands; and certain U.S. Government activities in the freely associated states of the Republic of the Marshall Islands, the Federated States of Micronesia, and the Republic of Palau), Director, Air Division, U.S. Environmental Protection Agency, 75 Hawthorne Street, San Francisco, CA 94105.

Region X (Alaska, Oregon, Idaho, Washington), Director, Air and Waste Management Division, U.S. Environmental Protection Agency, 1200 Sixth Avenue, Seattle, WA 98101.

(b) Section 111(c) directs the Administrator to delegate to each State, when appropriate, the authority to implement and enforce standards of performance for new stationary sources located in such State. All information required to be submitted to EPA under paragraph (a) of this section, must also be submitted to the appropriate State Agency of any State to which this authority has been delegated (provided, that each specific delegation may except sources from a certain Federal or State reporting requirement). The appropriate mailing address for those States whose delegation request has been approved is as follows:

(1) [Reserved]

(2) State of Alabama: Alabama Department of Environmental Management, P.O. Box 301463, Montgomery, Alabama 36130-1463.

(3) State of Alaska, Department of Environmental Conservation, Pouch O, Juneau, AK 99811.

(4) Arizona:

Arizona Department of Environmental Quality, 1110 West Washington Street, Phoenix, AZ 85007.

Maricopa County Air Quality Department, 1001 North Central Avenue, Suite 900, Phoenix, AZ 85004.

Pima County Department of Environmental Quality, 33 North Stone Avenue, Suite 700, Tucson, AZ 85701.

Pinal County Air Quality Control District, 31 North Pinal Street, Building F, Florence, AZ 85132.

NOTE: For tables listing the delegation status of agencies in Region IX, see paragraph (d) of this section.

(5) State of Arkansas: Chief, Division of Air Pollution Control, Arkansas Department of Pollution Control and Ecology, 8001 National Drive, P.O. Box 9583, Little Rock, AR 72209.

(6) California:

Amador County Air Pollution Control District, 12200-B Airport Road, Jackson, CA 95642.

Antelope Valley Air Quality Management District, 43301 Division Street, Suite 206, Lancaster, CA 93535.

Bay Area Air Quality Management District, 939 Ellis Street, San Francisco, CA 94109.

Butte County Air Quality Management District, 2525 Dominic Drive, Suite J, Chico, CA 95928.

Calaveras County Air Pollution Control District, 891 Mountain Ranch Road, San Andreas, CA 95249.

Colusa County Air Pollution Control District, 100 Sunrise Blvd., Suite A-3, Colusa, CA 95932-3246.

El Dorado County Air Quality Management District, 2850 Fairlane Court, Bldg. C, Placerville, CA 95667-4100.

Eastern Kern Air Pollution Control District, 2700 “M” Street, Suite 302, Bakersfield, CA 93301-2370.

Feather River Air Quality Management District, 1007 Live Oak Blvd., Suite B-3, Yuba City, CA 95991.

Glenn County Air Pollution Control District, 720 N. Colusa Street, P.O. Box 351, Willows, CA 95988-0351.

Great Basin Unified Air Pollution Control District, 157 Short Street, Suite 6, Bishop, CA 93514-3537.

Imperial County Air Pollution Control District, 150 South Ninth Street, El Centro, CA 92243-2801.

Lake County Air Quality Management District, 885 Lakeport Blvd., Lakeport, CA 95453-5405.

Lassen County Air Pollution Control District, 707 Nevada Street, Suite 1, Susanville, CA 96130.

Mariposa County Air Pollution Control District, P.O. Box 5, Mariposa, CA 95338.

Mendocino County Air Quality Management District, 306 E. Gobbi Street, Ukiah, CA 95482-5511.

Modoc County Air Pollution Control District, 619 North Main Street, Alturas, CA 96101.

Mojave Desert Air Quality Management District, 14306 Park Avenue, Victorville, CA 92392-2310.

Monterey Bay Unified Air Pollution Control District, 24580 Silver Cloud Court, Monterey, CA 93940.

North Coast Unified Air Quality Management District, 2300 Myrtle Avenue, Eureka, CA 95501-3327.

Northern Sierra Air Quality Management District, 200 Litton Drive, Suite 320, P.O. Box 2509, Grass Valley, CA 95945-2509.

Northern Sonoma County Air Pollution Control District, 150 Matheson Street, Healdsburg, CA 95448-4908.

Placer County Air Pollution Control District, 3091 County Center Drive, Suite 240, Auburn, CA 95603.

Sacramento Metropolitan Air Quality Management District, 777 12th Street, Third Floor, Sacramento, CA 95814-1908.

San Diego County Air Pollution Control District, 10124 Old Grove Road, San Diego, CA 92131-1649.

San Joaquin Valley Air Pollution Control District, 1990 E. Gettysburg, Fresno, CA 93726.

San Luis Obispo County Air Pollution Control District, 3433 Roberto Court, San Luis Obispo, CA 93401-7126.

Santa Barbara County Air Pollution Control District, 260 North San Antonio Road, Suite A, Santa Barbara, CA 93110-1315.

Shasta County Air Quality Management District, 1855 Placer Street, Suite 101, Redding, CA 96001-1759.

Siskiyou County Air Pollution Control District, 525 So. Foothill Drive, Yreka, CA 96097-3036.

South Coast Air Quality Management District, 21865 Copley Drive, Diamond Bar, CA 91765-4182.

Tehama County Air Pollution Control District, P.O. Box 8069 (1750 Walnut Street), Red Bluff, CA 96080-0038.

Tuolumne County Air Pollution Control District, 22365 Airport, Columbia, CA 95310.

Ventura County Air Pollution Control District, 669 County Square Drive, 2nd Floor, Ventura, CA 93003-5417.

Yolo-Solano Air Quality Management District, 1947 Galileo Court, Suite 103, Davis, CA 95616-4882.

NOTE: For tables listing the delegation status of agencies in Region IX, see paragraph (d) of this section.

(7) State of Colorado, Department of Public Health and Environment, 4300 Cherry Creek Drive South, Denver, CO 80222-1530.

NOTE: For a table listing Region VIII's NSPS delegation status, see paragraph (c) of this section.

(8) State of Connecticut, Bureau of Air Management, Department of Environmental Protection, State Office Building, 165 Capitol Avenue, Hartford, CT 06106.

(9) State of Delaware, Department of Natural Resources & Environmental Control, 89 Kings Highway, P.O. Box 1401, Dover, Delaware 19903.

(10) District of Columbia, Department of Public Health, Air Quality Division, 51 N Street, NE., Washington, DC 20002.

(11) State of Florida: Florida Department of Environmental Protection, Division of Air Resources Management, 2600 Blair Stone Road, MS 5500, Tallahassee, Florida 32399-2400.

(12) State of Georgia: Georgia Department of Natural Resources, Environmental Protection Division, Air Protection Branch, 4244 International Parkway, Suite 120, Atlanta, Georgia 30354.

(13) Hawaii:

Clean Air Branch, Hawaii Department of Health, 919 Ala Moana Blvd., Suite 203, Honolulu, HI 96814.

NOTE: For tables listing the delegation status of agencies in Region IX, see paragraph (d) of this section.

(14) State of Idaho, Department of Health and Welfare, Statehouse, Boise, ID 83701.

(15) State of Illinois: Illinois Environmental Protection Agency, 1021 North Grand Avenue East, Springfield, Illinois 62794.

(16) State of Indiana: Indiana Department of Environmental Management, Office of Air Quality, 100 North Senate Avenue, Indianapolis, Indiana 46204.

(17) State of Iowa: Iowa Department of Natural Resources, Environmental Protection Division, Air Quality Bureau, 7900 Hickman Road, Suite 1, Urbandale, IA 50322.

(18) State of Kansas: Kansas Department of Health and Environment, Bureau of Air and Radiation, 1000 S.W. Jackson, Suite 310, Topeka, KS 66612-1366.

(19) Commonwealth of Kentucky: Kentucky Department for Environmental Protection, Division for Air Quality, 300 Sower Boulevard, 2nd Floor, Frankfort, Kentucky 40601 or local agency, Louisville Metro Air Pollution Control District, 701 W. Ormsby Ave., Suite 303, Louisville, Kentucky 40203.

(20) State of Louisiana: Louisiana Department of Environmental Quality, P.O. Box 4301, Baton Rouge, Louisiana 70821-4301.

NOTE: For a list of delegated standards for Louisiana (excluding Indian country), see paragraph (e)(2) of this section.

(21) State of Maine, Bureau of Air Quality Control, Department of Environmental Protection, State House, Station No. 17, Augusta, ME 04333.

(22) State of Maryland, Department of the Environment, 1800 Washington Boulevard, Suite 705, Baltimore, Maryland 21230.

(23) Commonwealth of Massachusetts, Division of Air Quality Control, Department of Environmental Protection, One Winter Street, 7th floor, Boston, MA 02108.

(24) State of Michigan: Michigan Department of Natural Resources and Environment, Air Quality Division, P.O. Box 30028, Lansing, Michigan 48909.

(25) State of Minnesota: Minnesota Pollution Control Agency, Division of Air Quality, 520 Lafayette Road North, St. Paul, Minnesota 55155.

(26) State of Mississippi: Hand Deliver or Courier: Mississippi Department of Environmental Quality, Office of Pollution Control, Air Division, 515 East Amite Street, Jackson, Mississippi 39201, Mailing Address: Mississippi Department of Environmental Quality, Office of Pollution Control, Air Division, P.O. Box 2261, Jackson, Mississippi 39225.

(27) State of Missouri: Missouri Department of Natural Resources, Division of Environmental Quality, P.O. Box 176, Jefferson City, MO 65102.

(28) State of Montana, Department of Environmental Quality, 1520 E. 6th Ave., PO Box 200901, Helena, MT 59620-0901.

NOTE: For a table listing Region VIII's NSPS delegation status, see paragraph (c) of this section.

(29) State of Nebraska, Nebraska Department of Environmental Control, P.O. Box 94877, State House Station, Lincoln, NE 68509.

Lincoln-Lancaster County Health Department, Division of Environmental Health, 2200 St. Marys Avenue, Lincoln, NE 68502

(30) Nevada:

Nevada Division of Environmental Protection, 901 South Stewart Street, Suite 4001, Carson City, NV 89701-5249.

Clark County Department of Air Quality and Environmental Management, 500 S. Grand Central Parkway, 1st Floor, P.O. Box 555210, Las Vegas, NV 89155-5210.

Washoe County Health District, Air Quality Management Division, 1001 E. 9th Street, Building A, Suite 115A, Reno, NV 89520.

NOTE: For tables listing the delegation status of agencies in Region IX, see paragraph (d) of this section.

(31) State of New Hampshire, Air Resources Division, Department of Environmental Services, 64 North Main Street, Caller Box 2033, Concord, NH 03302-2033.

(32) State of New Jersey: New Jersey Department of Environmental Protection, Division of Environmental Quality, Enforcement Element, John Fitch Plaza, CN-027, Trenton, NJ 08625.

(1) The following table lists the specific source and pollutant categories that have been delegated to the states in Region II. The (X) symbol is used to indicate each category that has been delegated.

	Subpart	State			
		New Jersey	New York	Puerto Rico	Virgin Islands
D	Fossil-Fuel Fired Steam Generators for Which Construction Commenced After August 17, 1971 (Steam Generators and Lignite Fired Steam Generators)	X	X	X	X
Da	Electric Utility Steam Generating Units for Which Construction Commenced After September 18, 1978	X		X	
Db	Industrial-Commercial-Institutional Steam Generating Units	X	X	X	X
E	Incinerators	X	X	X	X
F	Portland Cement Plants	X	X	X	X
G	Nitric Acid Plants	X	X	X	X
H	Sulfuric Acid Plants	X	X	X	X
I	Asphalt Concrete Plants	X	X	X	X
J	Petroleum Refineries—(All Categories)	X	X	X	X

(33) State of New Mexico: New Mexico Environment Department, P.O. Box 5469, Santa Fe, New Mexico 87502-5469. Note: For a list of delegated standards for New Mexico (excluding Bernalillo County and Indian country), see paragraph (e)(1) of this section.

(i) Albuquerque-Bernalillo County Air Quality Control Board, c/o Environmental Health Department, P.O. Box 1293, Albuquerque, New Mexico 87103.

(ii) [Reserved]

(34) New York: New York State Department of Environmental Conservation, 50 Wolf Road Albany, New York 12233, attention: Division of Air Resources.

(35) State of North Carolina: North Carolina Department of Environmental Quality, Division of Air Quality, 1641 Mail Service Center, Raleigh, North Carolina 27699-1641 or local agencies, Forsyth County Office of Environmental Assistance and Protection, 201 North Chestnut Street, Winston-Salem, North Carolina 27101-4120; Mecklenburg County Land Use and Environmental Services Agency, Air Quality, 2145 Suttle Avenue, Charlotte, North Carolina 28208; Western North Carolina Regional Air Quality Agency, 125 S. Lexington Ave., Suite 101, Asheville, North Carolina 28801-3661.

(36) State of North Dakota, Division of Air Quality, North Dakota Department of Health, P.O. Box 5520, Bismarck, ND 58506-5520.

NOTE: For a table listing Region VIII's NSPS delegation status, see paragraph (c) of this section.

(37) State of Ohio:

(i) Medina, Summit and Portage Counties; Director, Akron Regional Air Quality Management District, 146 South High Street, Room 904, Akron, OH 44308.

(ii) Stark County; Director, Canton City Health Department, Air Pollution Control Division, 420 Market Avenue North, Canton, Ohio 44702-1544.

(iii) Butler, Clermont, Hamilton, and Warren Counties; Director, Hamilton County Department of Environmental Services, 250 William Howard Taft Road, Cincinnati, Ohio 45219-2660.

(iv) Cuyahoga County; Commissioner, Cleveland Department of Public Health, Division of Air Quality, 75 Erieview Plaza 2nd Floor, Cleveland, Ohio 44114.

(v) Clark, Darke, Greene, Miami, Montgomery, and Preble Counties; Director, Regional Air Pollution Control Agency, 117 South Main Street, Dayton, Ohio 45422-1280.

(vi) Lucas County and the City of Rossford (in Wood County); Director, City of Toledo, Division of Environmental Services, 348 South Erie Street, Toledo, OH 43604.

(vii) Adams, Brown, Lawrence, and Scioto Counties; Portsmouth Local Air Agency, 605 Washington Street, Third Floor, Portsmouth, OH 45662.

(viii) Allen, Ashland, Auglaize, Crawford, Defiance, Erie, Fulton, Hancock, Hardin, Henry, Huron, Marion, Mercer, Ottawa, Paulding, Putnam, Richland, Sandusky, Seneca, Van Wert Williams, Wood (Except City of Rossford), and Wyandot Counties; Ohio Environmental Protection Agency, Northwest District Office, Air Pollution Control, 347 North Dunbridge Road, Bowling Green, Ohio 43402.

(ix) Ashtabula, Caroll, Colombiana, Holmes, Lorain, and Wayne Counties; Ohio Environmental Protection Agency, Northeast District Office, Air Pollution Unit, 2110 East Aurora Road, Twinsburg, OH 44087.

(x) Athens, Belmont, Coshocton, Gallia, Guemsey, Harrison, Hocking, Jackson, Jefferson, Meigs, Monroe, Morgan, Muskingum, Noble, Perry, Pike, Ross, Tuscarawas, Vinton, and Washington Counties; Ohio Environmental Protection Agency, Southeast District Office, Air Pollution Unit, 2195 Front Street, Logan, OH 43138.

(xi) Champaign, Clinton, Highland, Logan, and Shelby Counties; Ohio Environmental Protection Agency, Southwest District Office, Air Pollution Unit, 401 East Fifth Street, Dayton, Ohio 45402-2911.

(xii) Delaware, Fairfield, Fayette, Franklin, Knox, Licking, Madison, Morrow, Pickaway, and Union Counties; Ohio Environmental Protection Agency, Central District Office, Air Pollution control, 50 West Town Street, Suite 700, Columbus, Ohio 43215.

(xiii) Geauga and Lake Counties; Lake County General Health District, Air Pollution Control, 33 Mill Street, Painesville, OH 44077.

(xiv) Mahoning and Trumbull Counties; Mahoning-Trumbull Air Pollution Control Agency, 345 Oak Hill Avenue, Suite 200, Youngstown, OH 44502.

(38) State of Oklahoma, Oklahoma State Department of Health, Air Quality Service, P.O. Box 53551, Oklahoma City, OK 73152.

(i) Oklahoma City and County: Director, Oklahoma City-County Health Department, 921 Northeast 23rd Street, Oklahoma City, OK 73105.

(ii) Tulsa County: Tulsa City-County Health Department, 4616 East Fifteenth Street, Tulsa, OK 74112.

(39) State of Oregon. (i) Oregon Department of Environmental Quality (ODEQ), 811 SW Sixth Avenue, Portland, OR 97204-1390, *http://www.deq.state.or.us.*

(ii) Lane Regional Air Pollution Authority (LRAPA), 1010 Main Street, Springfield, Oregon 97477, *http://www.lrapa.org.*

(40)(i) City of Philadelphia, Department of Public Health, Air Management Services, 321 University Avenue, Philadelphia, Pennsylvania 19104.

(ii) Commonwealth of Pennsylvania, Department of Environmental Protection, Bureau of Air Quality Control, P.O. Box 8468, 400 Market Street, Harrisburg, Pennsylvania 17105.

(iii) Allegheny County Health Department, Bureau of Environmental Quality, Division of Air Quality, 301 39th Street, Pittsburgh, Pennsylvania 15201.

(41) State of Rhode Island, Division of Air and Hazardous Materials, Department of Environmental Management, 291 Promenade Street, Providence, RI 02908.

(42) State of South Carolina: South Carolina Department of Health and Environmental Control, 2600 Bull Street, Columbia, South Carolina 29201.

(43) State of South Dakota, Air Quality Program, Department of Environment and Natural Resources, Joe Foss Building, 523 East Capitol, Pierre, SD 57501-3181.

NOTE: For a table listing Region VIII's NSPS delegation status, see paragragh (c) of this section.

(44) State of Tennessee: Tennessee Department of Environment and Conservation, Division of Air Pollution Control, William R. Snodgrass Tennessee Tower, 312 Rosa L. Parks Avenue, 15th Floor, Nashville, Tennessee 37243, or local agencies, Knox County Air Quality Management—Department of Public Health, 140 Dameron Avenue, Knoxville, Tennessee 37917; Metro Public Health Department, Pollution Control Division, 2500 Charlotte Ave., Nashville, Tennessee 37209; Chattanooga-Hamilton County Air Pollution Control Bureau, 6125 Preservation Drive, Chattanooga, Tennessee 37416; Shelby County Health Department, Pollution Control Section, 814 Jefferson Avenue, Memphis, Tennessee 38105.

(45) State of Texas, Texas Air Control Board, 6330 Highway 290 East, Austin, TX 78723.

(46) State of Utah, Division of Air Quality, Department of Environmental Quality, P.O. Box 144820, Salt Lake City, UT 84114-4820.

NOTE: For a table listing Region VIII's NSPS delegation status, see paragraph (c) of this section.

(47) State of Vermont, Air Pollution Control Division, Agency of Natural Resources, Building 3 South, 103 South Main Street, Waterbury, VT 05676.

(48) Commonwealth of Virginia, Department of Environmental Quality, 629 East Main Street, Richmond, Virginia 23219.

(49) State of Washington.

(i) Washington State Department of Ecology (Ecology), P.O. Box 47600, Olympia, WA 98504-7600, *http://www.ecy.wa.gov/*

(ii) Benton Clean Air Authority (BCAA), 650 George Washington Way, Richland, WA 99352-4289, *http://www.bcaa.net/*

(iii) Northwest Air Pollution Control Authority (NWAPA), 1600 South Second St., Mount Vernon, WA 98273-5202, *http://www.nwair.org/*

(iv) Olympic Regional Clean Air Agency (ORCAA), 909 Sleater-Kinney Road S.E., Suite 1, Lacey, WA 98503-1128, *http://www.orcaa.org/*

(v) Puget Sound Clean Air Agency (PSCAA), 110 Union Street, Suite 500, Seattle, WA 98101-2038, *http://www.pscleanair.org/*

(vi) Spokane County Air Pollution Control Authority (SCAPCA), West 1101 College, Suite 403, Spokane, WA 99201, *http://www.scapca.org/*

(vii) Southwest Clean Air Agency (SWCAA), 1308 NE. 134th St., Vancouver, WA 98685-2747, *http://www.swcleanair.org/*

(viii) Yakima Regional Clean Air Authority (YRCAA), 6 South 2nd Street, Suite 1016, Yakima, WA 98901, *http://co.yakima.wa.us/cleanair/default.htm*

(ix) The following table lists the delegation status of the New Source Performance Standards for the State of Washington. An "X" indicates the subpart has been delegated, subject to all the conditions and limitations set forth in Federal law and the letters granting delegation. Some authorities cannot be delegated and are retained by EPA. Refer to the letters granting delegation for a discussion of these retained authorities. The dates noted at the end of the table indicate the effective dates of Federal rules that have been delegated. Authority for implementing and enforcing any amendments made to these rules after these effective dates are not delegated.

NSPS Subparts Delegated to Washington Air Agencies

Subpart[1]	Washington							
	Ecology[2]	BCAA[3]	NWAPA[4]	ORCAA[5]	PSCAA[6]	SCAPCA[7]	SWCAA[8]	YRCAA[9]
A General Provisions	X	X	X	X	X	X	X	X
B Adoption and Submittal of State Plans for Designated Facilities								
C Emission Guidelines and Compliance Times								
Cb Large Municipal Waste Combustors that are Constructed on or before September 20, 1994 (Emission Guidelines and Compliance Times)								
Cc Municipal Solid Waste Landfills (Emission Guidelines and Compliance Times) Cd Sulfuric Acid Production Units (Emission Guidelines and Compliance Times)								
Ce Hospital/Medical/Infectious Waste Incinerators (Emission Guidelines and Compliance Times)								
D Fossil-Fuel-Fired Steam Generators for which Construction is Commenced after August 17, 1971	X	X	X	X	X	X	X	X

[1]Any authority within any subpart of this part that is not delegable, is not delegated. Please refer to Attachment B to the delegation letters for a listing of the NSPS authorities excluded from delegation.

[2]Washington State Department of Ecology, for 40 CFR 60.17(h)(1), (h)(2), (h)(3) and 40 CFR part 60, subpart AAAA, as in effect on June 6, 2001; for 40 CFR part 60, subpart CCCC, as in effect on June 1, 2001; and for all other NSPS delegated, as in effect February 20, 2001.

[3]Benton Clean Air Authority, for 40 CFR 60.17(h)(1), (h)(2), (h)(3) and 40 CFR part 60, subpart AAAA, as in effect on June 6, 2001; for 40 CFR part 60, subpart CCCC, as in effect on June 1, 2001; and for all other NSPS delegated, as in effect February 20, 2001.

[4]Northwest Air Pollution Authority, for all NSPS delegated, as in effect on July 1, 2000.

[5]Olympic Regional Clean Air Authority, for 40 CFR 60.17(h)(1), (h)(2), (h)(3) and 40 CFR part 60, subpart AAAA, as in effect on June 6, 2001; for 40 CFR part 60, subpart CCCC, as in effect on June 1, 2001; and for all other NSPS delegated, as in effect February 20, 2001.

[6]Puget Sound Clean Air Authority, for all NSPS delegated, as in effect on July 1, 2002.

[7]Spokane County Air Pollution Control Authority, for 40 CFR 60.17(h)(1), (h)(2), (h)(3) and 40 CFR part 60, subpart AAAA, as in effect on June 6, 2001; for 40 CFR part 60, subpart CCCC, as in effect on June 1, 2001; and for all other NSPS delegated, as in effect February 20, 2001.

[8]Southwest Clean Air Agency, for all NSPS delegated, as in effect on July 1, 2000.

[9]Yakima Regional Clean Air Authority, for 40 CFR 60.17(h)(1), (h)(2), (h)(3) and 40 CFR part 60, subpart AAAA, as in effect on June 6, 2001; for 40 CFR part 60, subpart CCCC, as in effect on June 1, 2001; and for all other NSPS delegated, as in effect February 20, 2001.

[10]Subpart S of this part is not delegated to local agencies in Washington because the Washington State Department of Ecology retains sole authority to regulate Primary Aluminum Plants, pursuant to Washington Administrative Code 173-415-010.

[11]Subpart BB of this part is not delegated to local agencies in Washington because the Washington State Department of Ecology retains sole authority to regulate Kraft and Sulfite Pulping Mills, pursuant to Washington State Administrative Code 173-405-012 and 173-410-012.

(50) State of West Virginia, Department of Environmental Protection, Division of Air Quality, 601 57th Street, SE., Charleston, West Virginia 25304.

(51) State of Wisconsin: Wisconsin Department of Natural Resouces, 101 South Webster St., P.O. Box 7921, Madison, Wisconsin 53707-7921.

(52) State of Wyoming, Department of Environmental Quality, Air Quality Division, Herschler Building, 122 West 25th Street, Cheyenne, WY 82002.

NOTE: For a table listing Region VIII's NSPS delegation status, see paragraph (c) of this section.

(53) Territory of Guam: Guam Environmental Protection Agency, P.O. Box 22439 GMF, Barrigada, Guam 96921.

NOTE: For tables listing the delegation status of agencies in Region IX, see paragraph (d) of this section.

(54) Commonwealth of Puerto Rico: Commonwealth of Puerto Rico Environmental Quality Board, P.O. Box 11488, Santurce, PR 00910, Attention: Air Quality Area Director (see table under §60.4(b)(FF)(1)).

(55) U.S. Virgin Islands: U.S. Virgin Islands Department of Conservation and Cultural Affairs, P.O. Box 578, Charlotte Amalie, St. Thomas, VI 00801.

(56) American Samoa: American Samoa Environmental Protection Agency, P.O. Box PPA, Pago Pago, American Samoa 96799.

NOTE: For tables listing the delegation status of agencies in Region IX, see paragraph (d) of this section.

(57) Commonwealth of the Northern Mariana Islands: CNMI Division of Environmental Quality, P.O. Box 501304, Saipan, MP 96950.

NOTE: For tables listing the delegation status of agencies in Region IX, see paragraph (d) of this section.

(c) The delegation status table for New Source Performance Standards for Region VIII can be found online at*http://www2.epa.gov/region8/air-program.*

(d) The following tables list the specific part 60 standards that have been delegated unchanged to the air pollution control agencies in Region IX. The (X) symbol is used to indicate each standard that has been delegated. The following provisions of this subpart are not delegated: §§60.4(b), 60.8(b), 60.9, 60.11(b), 60.11(e), 60.13(a), 60.13(d)(2), 60.13(g), 60.13(i).

(1) *Arizona.* The following table identifies delegations for Arizona:

Delegation Status for New Source Performance Standards for Arizona

	Subpart	Air pollution control agency			
		Arizona DEQ	Maricopa County	Pima County	Pinal County

[1]The Louisiana Department of Environmental Quality (LDEQ) has been delegated all Part 60 standards promulgated by EPA, except subpart AAA—Standards of Performance for New Residential Wood Heaters—as amended in the FEDERAL REGISTER through July 1, 2013.

(3) *Albuquerque-Bernalillo County Air Quality Control Board.* The Albuquerque-Bernalillo County Air Quality Control Board has been delegated all part 60 standards promulgated by EPA, except subpart AAA—Standards of Performance for New Residential Wood Heaters, as amended in the FEDERAL REGISTER through September 13, 2013.

§60.5 Determination of construction or modification.

(a) When requested to do so by an owner or operator, the Administrator will make a determination of whether action taken or intended to be taken by such owner or operator constitutes construction (including reconstruction) or modification or the commencement thereof within the meaning of this part.

(b) The Administrator will respond to any request for a determination under paragraph (a) of this section within 30 days of receipt of such request.

§60.6 Review of plans.

(a) When requested to do so by an owner or operator, the Administrator will review plans for construction or modification for the purpose of providing technical advice to the owner or operator.

(b)(1) A separate request shall be submitted for each construction or modification project.

(2) Each request shall identify the location of such project, and be accompanied by technical information describing the proposed nature, size, design, and method of operation of each affected facility involved in such project, including information on any equipment to be used for measurement or control of emissions.

(c) Neither a request for plans review nor advice furnished by the Administrator in response to such request shall (1) relieve an owner or operator of legal responsibility for compliance with any provision of this part or of any applicable State or local requirement, or (2) prevent the Administrator from implementing or enforcing any provision of this part or taking any other action authorized by the Act.

§60.7 Notification and record keeping.

(a) Any owner or operator subject to the provisions of this part shall furnish the Administrator written notification or, if acceptable to both the Administrator and the owner or operator of a source, electronic notification, as follows:

(1) A notification of the date construction (or reconstruction as defined under §60.15) of an affected facility is commenced postmarked no later than 30 days after such date. This requirement shall not apply in the case of mass-produced facilities which are purchased in completed form.

(2) [Reserved]

(3) A notification of the actual date of initial startup of an affected facility postmarked within 15 days after such date.

(4) A notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless that change is specifically exempted under an applicable subpart or in §60.14(e). This notice shall be postmarked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capacity of the facility before and after the change, and the expected completion date of the change. The Administrator may request additional relevant information subsequent to this notice.

(5) A notification of the date upon which demonstration of the continuous monitoring system performance commences in accordance with §60.13(c). Notification shall be postmarked not less than 30 days prior to such date.

(6) A notification of the anticipated date for conducting the opacity observations required by §60.11(e)(1) of this part. The notification shall also include, if appropriate, a request for the Administrator to provide a visible emissions reader during a performance test. The notification shall be postmarked not less than 30 days prior to such date.

(7) A notification that continuous opacity monitoring system data results will be used to determine compliance with the applicable opacity standard during a performance test required by §60.8 in lieu of Method 9 observation data as allowed by §60.11(e)(5) of this part. This notification shall be postmarked not less than 30 days prior to the date of the performance test.

(b) Any owner or operator subject to the provisions of this part shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility; any malfunction of the air

pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

(c) Each owner or operator required to install a continuous monitoring device shall submit excess emissions and monitoring systems performance report (excess emissions are defined in applicable subparts) and-or summary report form (see paragraph (d) of this section) to the Administrator semiannually, except when: more frequent reporting is specifically required by an applicable subpart; or the Administrator, on a case-by-case basis, determines that more frequent reporting is necessary to accurately assess the compliance status of the source. All reports shall be postmarked by the 30th day following the end of each six-month period. Written reports of excess emissions shall include the following information:

(1) The magnitude of excess emissions computed in accordance with §60.13(h), any conversion factor(s) used, and the date and time of commencement and completion of each time period of excess emissions. The process operating time during the reporting period.

(2) Specific identification of each period of excess emissions that occurs during startups, shutdowns, and malfunctions of the affected facility. The nature and cause of any malfunction (if known), the corrective action taken or preventative measures adopted.

(3) The date and time identifying each period during which the continuous monitoring system was inoperative except for zero and span checks and the nature of the system repairs or adjustments.

(4) When no excess emissions have occurred or the continuous monitoring system(s) have not been inoperative, repaired, or adjusted, such information shall be stated in the report.

(d) The summary report form shall contain the information and be in the format shown in figure 1 unless otherwise specified by the Administrator. One summary report form shall be submitted for each pollutant monitored at each affected facility.

(1) If the total duration of excess emissions for the reporting period is less than 1 percent of the total operating time for the reporting period and CMS downtime for the reporting period is less than 5 percent of the total operating time for the reporting period, only the summary report form shall be submitted and the excess emission report described in §60.7(c) need not be submitted unless requested by the Administrator.

(2) If the total duration of excess emissions for the reporting period is 1 percent or greater of the total operating time for the reporting period or the total CMS downtime for the reporting period is 5 percent or greater of the total operating time for the reporting period, the summary report form and the excess emission report described in §60.7(c) shall both be submitted.

Figure 1—Summary Report—Gaseous and Opacity Excess Emission and Monitoring System Performance

Date of Latest CMS Certification or Audit

Process Unit(s) Description:

Total source operating time in reporting period[1]

Emission data summary[1]		CMS performance summary[1]	
1. Duration of excess emissions in reporting period due to:		1. CMS downtime in reporting period due to:	
a. Startup/shutdown		a. Monitor equipment malfunctions	
b. Control equipment problems		b. Non-Monitor equipment malfunctions	
c. Process problems		c. Quality assurance calibration	
d. Other known causes		d. Other known causes	
e. Unknown causes		e. Unknown causes	
2. Total duration of excess emission		2. Total CMS Downtime	
3. Total duration of excess emissions × (100) [Total source operating time]	%[2]	3. [Total CMS Downtime] × (100) [Total source operating time]	%[2]

[1]For opacity, record all times in minutes. For gases, record all times in hours.

[2]For the reporting period: If the total duration of excess emissions is 1 percent or greater of the total operating time or th e total CMS downtime is 5 percent or greater of the total operating time, both the summary report form and the excess emission report described in §60.7(c) shall be submitted.

On a separate page, describe any changes since last quarter in CMS, process or controls. I certify that the information contained in this report is true, accurate, and complete.

Name

Signature

Title

Date

(e)(1) Notwithstanding the frequency of reporting requirements specified in paragraph (c) of this section, an owner or operator who is required by an applicable subpart to submit excess emissions and monitoring systems performance reports (and summary reports) on a quarterly (or more frequent) basis may reduce the frequency of reporting for that standard to semiannual if the following conditions are met:

(i) For 1 full year (e.g., 4 quarterly or 12 monthly reporting periods) the affected facility's excess emissions and monitoring systems reports submitted to comply with a standard under this part continually demonstrate that the facility is in compliance with the applicable standard;

(ii) The owner or operator continues to comply with all recordkeeping and monitoring requirements specified in this subpart and the applicable standard; and

(iii) The Administrator does not object to a reduced frequency of reporting for the affected facility,as provided in paragraph (e)(2) of this section.

(2) The frequency of reporting of excess emissions and monitoring systems performance (and summary) reports may be reduced only after the owner or operator notifies the Administrator in writing of his or her intention to

make such a change and the Administrator does not object to the intended change. In deciding whether to approve a reduced frequency of reporting, the Administrator may review information concerning the source's entire previous performance history during the required recordkeeping period prior to the intended change, including performance test results, monitoring data, and evaluations of an owner or operator's conformance with operation and maintenance requirements. Such information may be used by the Administrator to make a judgment about the source's potential for noncompliance in the future. If the Administrator disapproves the owner or operator's request to reduce the frequency of reporting, the Administrator will notify the owner or operator in writing within 45 days after receiving notice of the owner or operator's intention. The notification from the Administrator to the owner or operator will specify the grounds on which the disapproval is based. In the absence of a notice of disapproval within 45 days, approval is automatically granted.

(3) As soon as monitoring data indicate that the affected facility is not in compliance with any emission limitation or operating parameter specified in the applicable standard, the frequency of reporting shall revert to the frequency specified in the applicable standard, and the owner or operator shall submit an excess emissions and monitoring systems performance report (and summary report, if required) at the next appropriate reporting period following the noncomplying event. After demonstrating compliance with the applicable standard for another full year, the owner or operator may again request approval from the Administrator to reduce the frequency of reporting for that standard as provided for in paragraphs (e)(1) and (e)(2) of this section.

(f) Any owner or operator subject to the provisions of this part shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by this part recorded in a permanent form suitable for inspection. The file shall be retained for at least two years following the date of such measurements, maintenance, reports, and records, except as follows:

(1) This paragraph applies to owners or operators required to install a continuous emissions monitoring system (CEMS) where the CEMS installed is automated, and where the calculated data averages do not exclude periods of CEMS breakdown or malfunction. An automated CEMS records and reduces the measured data to the form of the pollutant emission standard through the use of a computerized data acquisition system. In lieu of maintaining a file of all CEMS subhourly measurements as required under paragraph (f) of this section, the owner or operator shall retain the most recent consecutive three averaging periods of subhourly measurements and a file that contains a hard copy of the data acquisition system algorithm used to reduce the measured data into the reportable form of the standard.

(2) This paragraph applies to owners or operators required to install a CEMS where the measured data is manually reduced to obtain the reportable form of the standard, and where the calculated data averages do not exclude periods of CEMS breakdown or malfunction. In lieu of maintaining a file of all CEMS subhourly measurements as required under paragraph (f) of this section, the owner or operator shall retain all subhourly measurements for the most recent reporting period. The subhourly measurements shall be retained for 120 days from the date of the most recent summary or excess emission report submitted to the Administrator.

(3) The Administrator or delegated authority, upon notification to the source, may require the owner or operator to maintain all measurements as required by paragraph (f) of this section, if the Administrator or the delegated authority determines these records are required to more accurately assess the compliance status of the affected source.

(g) If notification substantially similar to that in paragraph (a) of this section is required by any other State or local agency, sending the Administrator a copy of that notification will satisfy the requirements of paragraph (a) of this section.

(h) Individual subparts of this part may include specific provisions which clarify or make inapplicable the provisions set forth in this section.

§60.8 Performance tests.

(a) Except as specified in paragraphs (a)(1),(a)(2), (a)(3), and (a)(4) of this section, within 60 days after achievingthe maximum production rate at which the affected facility will be operated, but not later than 180 days after initial startup of such facility, or at such other times specified by this part, and at such other times as may be required by the Administrator under section 114 of the Act, the owner or operator of such facility shall conduct performance test(s) and furnish the Administrator a written report of the results of such performance test(s).

(1) If a force majeure is about to occur, occurs, or has occurred for which the affected owner or operator intends to assert a claim of force majeure, the owner or operator shall notify the Administrator, in writing as soon as practicable following the date the owner or operator first knew, or through due diligence should have known that the event may cause or caused a delay in testing beyond the regulatory deadline, but the notification must occur before the performance test deadline unless the initial force majeure or a subsequent force majeure event delays the notice, and in such cases, the notification shall occur as soon as practicable.

(2) The owner or operator shall provide to the Administrator a written description of the force majeure event and a rationale for attributing the delay in testing beyond the regulatory deadline to the force majeure; describe the measures taken or to be taken to minimize the delay; and identify a date by which the owner or operator proposes to conduct the performance test. The performance test shall be conducted as soon as practicable after the force majeure occurs.

(3) The decision as to whether or not to grant an extension to the performance test deadline is solely within the discretion of the Administrator. The Administrator will notify the owner or operator in writing of approval or disapproval of the request for an extension as soon as practicable.

(4) Until an extension of the performance test deadline has been approved by the Administrator under paragraphs (a)(1), (2), and (3) of this section, the owner or operator of the affected facility remains strictly subject to the requirements of this part.

(b) Performance tests shall be conducted and data reduced in accordance with the test methods and procedures contained in each applicable subpart unless the Administrator (1) specifies or approves, in specific cases, the use of a reference method with minor changes in methodology, (2) approves the use of an equivalent method, (3) approves the use of an alternative method the results of which he has determined to be adequate for indicating whether a specific source is in compliance, (4) waives the requirement for performance tests because the owner or operator of a source has demonstrated by other means to the Administrator's satisfaction that the affected facility is in compliance with the standard, or (5) approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors. Nothing in this paragraph shall be construed to abrogate the Administrator's authority to require testing under section 114 of the Act.

(c) Performance tests shall be conducted under such conditions as the Administrator shall specify to the plant operator based on representative performance of the affected facility. The owner or operator shall make available to the Administrator such records as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction shall not constitute representative conditions for the purpose of a performance test nor shall emissions in excess of the level of the applicable emission limit during periods of startup, shutdown, and malfunction be considered a violation of the applicable emission limit unless otherwise specified in the applicable standard.

(d) The owner or operator of an affected facility shall provide the Administrator at least 30 days prior notice of any performance test, except as specified under other subparts, to afford the Administrator the opportunity to have an observer present. If after 30 days notice for an initially scheduled performance test, there is a delay (due to

operational problems, etc.) in conducting the scheduled performance test, the owner or operator of an affected facility shall notify the Administrator (or delegated State or local agency) as soon as possible of any delay in the original test date, either by providing at least 7 days prior notice of the rescheduled date of the performance test, or by arranging a rescheduled date with the Administrator (or delegated State or local agency) by mutual agreement.

(e) The owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

(1) Sampling ports adequate for test methods applicable to such facility. This includes (i) constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures and (ii) providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.

(2) Safe sampling platform(s).

(3) Safe access to sampling platform(s).

(4) Utilities for sampling and testing equipment.

(f) Unless otherwise specified in the applicable subpart, each performance test shall consist of three separate runs using the applicable test method.

(1) Each run shall be conducted for the time and under the conditions specified in the applicable standard. For the purpose of determining compliance with an applicable standard, the arithmetic means of results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances, beyond the owner or operator's control, compliance may, upon the Administrator's approval, be determined using the arithmetic mean of the results of the two other runs.

(2) Contents of report (electronic or paper submitted copy). Unless otherwise specified in a relevant standard or test method, or as otherwise approved by the Administrator in writing, the report for a performance test shall include the elements identified in paragraphs (f)(2)(i) through (vi) of this section.

(i) General identification information for the facility including a mailing address, the physical address, the owner or operator or responsible official (where applicable) and his/her email address, and the appropriate Federal Registry System (FRS) number for the facility.

(ii) Purpose of the test including the applicable regulation(s) requiring the test, the pollutant(s) and other parameters being measured, the applicable emission standard and any process parameter component, and a brief process description.

(iii) Description of the emission unit tested including fuel burned, control devices, and vent characteristics; the appropriate source classification code (SCC); the permitted maximum process rate (where applicable); and the sampling location.

(iv) Description of sampling and analysis procedures used and any modifications to standard procedures, quality assurance procedures and results, record of process operating conditions that demonstrate the applicable test conditions are met, and values for any operating parameters for which limits were being set during the test.

(v) Where a test method requires you record or report, the following shall be included: Record of preparation of standards, record of calibrations, raw data sheets for field sampling, raw data sheets for

field and laboratory analyses, chain-of-custody documentation, and example calculations for reported results.

(vi) Identification of the company conducting the performance test including the primary office address, telephone number, and the contact for this test program including his/her email address.

(g) The performance testing shall include a test method performance audit (PA) during the performance test. The PAs consist of blind audit samples supplied by an accredited audit sample provider and analyzed during the performance test in order to provide a measure of test data bias. Gaseous audit samples are designed to audit the performance of the sampling system as well as the analytical system and must be collected by the sampling system during the compliance test just as the compliance samples are collected. If a liquid or solid audit sample is designed to audit the sampling system, it must also be collected by the sampling system during the compliance test. If multiple sampling systems or sampling trains are used during the compliance test for any of the test methods, the tester is only required to use one of the sampling systems per method to collect the audit sample. The auditsample must be analyzed by the same analyst using the same analytical reagents and analytical system and at the same time as the compliance samples. Retests are required when there is a failure to produce acceptable results for an audit sample. However, if the audit results do not affect the compliance or noncompliance status of the affected facility, the compliance authority may waive the reanalysis requirement, further audits, or retests and accept the results of the compliance test. Acceptance of the test results shall constitute a waiver of the reanalysis requirement, further audits, or retests. The compliance authority may also use the audit sample failure and the compliance test results as evidence to determine the compliance or noncompliance status of the affected facility. A blind audit sample is a sample whose value is known only to the sample provider and is not revealed to the tested facility until after they report the measured value of the audit sample. For pollutants that exist in the gas phase at ambient temperature, the audit sample shall consist of an appropriate concentration of the pollutant in air or nitrogen that can be introduced into the sampling system of the test method at or near the same entry point as a sample from the emission source. If no gas phase audit samples are available, an acceptable alternative is a sample of the pollutant in the same matrix that would be produced when the sample is recovered from the sampling system as required by the test method. For samples that exist only in a liquid or solid form at ambient temperature, the audit sample shall consist of an appropriate concentration of the pollutant in the same matrix that would be produced when the sample is recovered from the sampling system as required by the test method. An accredited audit sample provider (AASP) is an organization that has been accredited to prepare audit samples by an independent, third party accrediting body.

(1) The source owner, operator, or representative of the tested facility shall obtain an audit sample, if commercially available, from an AASP for each test method used for regulatory compliance purposes. No audit samples are required for the following test methods: Methods 3A and 3C of appendix A-3 of part 60, Methods 6C, 7E, 9, and 10 of appendix A-4 of part 60, Methods 18 and 19 of appendix A-6 of part 60, Methods 20, 22,and 25A of appendix A-7 of part 60, Methods 30A and 30B of appendix A-8 of part 60, and Methods 303, 318, 320, and 321 of appendix A of part 63 of this chapter. If multiple sources at a single facility are tested during a compliance test event, only one audit sample is required for each method used during a compliance test. The compliance authority responsible for the compliance test may waive the requirement to include an audit sample if they believe that an audit sample is not necessary. “Commercially available” means that two or more independent AASPs have blind audit samples available for purchase. If the source owner, operator, or representative cannot find an audit sample for a specific method, the owner, operator, or representative shall consult the EPA Web site at the following URL, *www.epa.gov/ttn/emc,* to confirm whether there is a source that can supply an audit sample for that method. If the EPA Web site does not list an available audit sample at least 60 days prior to the beginning of the compliance test, the source owner, operator, or representative shall not be required to include an audit sample as part of the quality assurance program for the compliance test. When ordering an audit sample, the source owner, operator, or representative shall give the sample provider an estimate for the concentration of each pollutant that is emitted by the source or the estimated concentration of

each pollutant based on the permitted level and the name, address, and phone number of the compliance authority. The source owner, operator, or representative shall report the results for the audit sample along with a summary of the emission test results for the audited pollutant to the compliance authority and shall report the results of the audit sample to the AASP. The source owner, operator, or representative shall make both reports at the same time and in the same manner or shall report to the compliance authority first and then report to the AASP. If the method being audited is a method that allows the samples to be analyzed in the field and the tester plans to analyze the samples in the field, the tester may analyze the audit samples prior to collecting the emission samples provided a representative of the compliance authority is present at the testing site. The tester may request and the compliance authority may grant a waiver to the requirement that a representative of the compliance authority must be present at the testing site during the field analysis of an audit sample. The source owner, operator, or representative may report the results of the audit sample to the compliance authority and report the results of the audit sample to the AASP prior to collecting any emission samples. The test protocol and final test report shall document whether an audit sample was ordered and utilized and the pass/fail results as applicable.

(2) An AASP shall have and shall prepare, analyze, and report the true value of audit samples in accordance with a written technical criteria document that describes how audit samples will be prepared and distributed in a manner that will ensure the integrity of the audit sample program. An acceptable technical criteria document shall contain standard operating procedures for all of the following operations:

(i) Preparing the sample;

(ii) Confirming the true concentration of the sample;

(iii) Defining the acceptance limits for the results from a well qualified tester. This procedure must use well established statistical methods to analyze historical results from well qualified testers. The acceptance limits shall be set so that there is 95 percent confidence that 90 percent of well qualified labs will produce future results that are within the acceptance limit range.

(iv) Providing the opportunity for the compliance authority to comment on the selected concentration level for an audit sample;

(v) Distributing the sample to the user in a manner that guarantees that the true value of the sample is unknown to the user;

(vi) Recording the measured concentration reported by the user and determining if the measured value is within acceptable limits;

(vii) The AASP shall report the results from each audit sample in a timely manner to the compliance authority and then to the source owner, operator, or representative. The AASP shall make both reports at the same time and in the same manner or shall report to the compliance authority first and then report to the source owner, operator, or representative. The results shall include the name of the facility tested, the date on which the compliance test was conducted, the name of the company performing the sample collection, the name of the company that analyzed the compliance samples including the audit sample, the measured result for the audit sample, and whether the testing company passed or failed the audit. The AASP shall report the true value of the audit sample to the compliance authority. The AASP may report the true value to the source owner, operator, or representative if the AASP's operating plan ensures that no laboratory will receive the same audit sample twice.

(viii) Evaluating the acceptance limits of samples at least once every two years to determine in cooperation with the voluntary consensus standard body if they should be changed;

(ix) Maintaining a database, accessible to the compliance authorities, of results from the audit that shall include the name of the facility tested, the date on which the compliance test was conducted, the name of the company performing the sample collection, the name of the company that analyzed the compliance samples including the audit sample, the measured result for the audit sample, the true value of the audit sample, the acceptance range for the measured value, and whether the testing company passed or failed the audit.

(3) The accrediting body shall have a written technical criteria document that describes how it will ensure that the AASP is operating in accordance with the AASP technical criteria document that describes how audit samples are to be prepared and distributed. This document shall contain standard operating procedures for all of the following operations:

(i) Checking audit samples to confirm their true value as reported by the AASP;

(ii) Performing technical systems audits of the AASP's facilities and operating procedures at least once every two years;

(iii) Providing standards for use by the voluntary consensus standard body to approve the accrediting body that will accredit the audit sample providers.

(4) The technical criteria documents for the accredited sample providers and the accrediting body shall be developed through a public process guided by a voluntary consensus standards body (VCSB). The VCSB shall operate in accordance with the procedures and requirements in the Office of Management and Budget Circular A-119. A copy of Circular A-119 is available upon request by writing the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street, NW., Washington, DC 20503, by calling (202) 395-6880 or downloading online at *http://standards.gov/standards_gov/a119.cfm.* The VCSB shall approve all accrediting bodies. The Administrator will review all technical criteria documents. If the technical criteria documents do not meet the minimum technical requirements in paragraphs (g)(2) through (4) of this section, the technical criteria documents are not acceptable and the proposed audit sample program is not capable of producing audit samples of sufficient quality to be used in a compliance test. All acceptable technical criteria documents shall be posted on the EPA Web site at the following URL, *http://www.epa.gov/ttn/emc.*

(h) Unless otherwise specified in the applicable subpart, each test location must be verified to be free of cyclonic flow and evaluated for the existence of emission gas stratification and the required number of sampling traverse points. If other procedures are not specified in the applicable subpart to the regulations, use the appropriate procedures in Method 1 to check for cyclonic flow and Method 7E to evaluate emission gas stratification and selection of sampling points.

(i) Whenever the use of multiple calibration gases is required by a test method, performance specification, or quality assurance procedure in a part 60 standard or appendix, Method 205 of 40 CFR part 51, appendix M of this chapter, "Verification of Gas Dilution Systems for Field Instrument Calibrations," may be used.

§60.9 Availability of information.

The availability to the public of information provided to, or otherwise obtained by, the Administrator under this part shall be governed by part 2 of this chapter. (Information submitted voluntarily to the Administrator for the purposes of §§60.5 and 60.6 is governed by §§2.201 through 2.213 of this chapter and not by §2.301 of this chapter.)

§60.10 State authority.

The provisions of this part shall not be construed in any manner to preclude any State or political subdivision thereof from:

(a) Adopting and enforcing any emission standard or limitation applicable to an affected facility, provided that such emission standard or limitation is not less stringent than the standard applicable to such facility.

(b) Requiring the owner or operator of an affected facility to obtain permits, licenses, or approvals prior to initiating construction, modification, or operation of such facility.

§60.11 Compliance with standards and maintenance requirements.

(a) Compliance with standards in this part, other than opacity standards, shall be determined in accordance with performance tests established by §60.8, unless otherwise specified in the applicable standard.

(b) Compliance with opacity standards in this part shall be determined by conducting observations in accordance with Method 9 in appendix A of this part, any alternative method that is approved by the Administrator, or as provided in paragraph (e)(5) of this section. For purposes of determining initial compliance, the minimum total time of observations shall be 3 hours (30 6-minute averages) for the performance test or other set of observations (meaning those fugitive-type emission sources subject only to an opacity standard).

(c) The opacity standards set forth in this part shall apply at all times except during periods of startup, shutdown, malfunction, and as otherwise provided in the applicable standard.

(d) At all times, including periods of startup, shutdown, and malfunction, owners and operators shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Administrator which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures, and inspection of the source.

(e)(1) For the purpose of demonstrating initial compliance, opacity observations shall be conducted concurrently with the initial performance test required in §60.8 unless one of the following conditions apply. If no performance test under §60.8 is required, then opacity observations shall be conducted within 60 days after achieving the maximum production rate at which the affected facility will be operated but no later than 180 days after initial startup of the facility. If visibility or other conditions prevent the opacity observations from being conducted concurrently with the initial performance test required under §60.8, the source owner or operator shall reschedule the opacity observations as soon after the initial performance test as possible, but not later than 30 days thereafter, and shall advise the Administrator of the rescheduled date. In these cases, the 30-day prior notification to the Administrator required in §60.7(a)(6) shall be waived. The rescheduled opacity observations shall be conducted (to the extent possible) under the same operating conditions that existed during the initial performance test conducted under §60.8. The visible emissions observer shall determine whether visibility or other conditions prevent the opacity observations from being made concurrently with the initial performance test in accordance with procedures contained in Method 9 of appendix B of this part. Opacity readings of portions of plumes which contain condensed, uncombined water vapor shall not be used for purposes of determing compliance with opacity standards. The owner or operator of an affected facility shall make available, upon request by the Administrator, such records as may be necessary to determine the conditions under which the visual observations were made and shall provide evidence indicating proof of current visible observer emission certification. Except as provided in paragraph (e)(5) of this section, the results of continuous monitoring by transmissometer which indicate that the opacity at the time visual observations were made was not in excess of the standard are probative but not conclusive evidence of the actual opacity of an emission, provided that the source shall meet the burden of proving that the instrument used meets (at the time of the alleged violation) Performance Specification 1 in appendix B of this part, has been properly maintained and (at the time of the alleged violation) that the resulting data have not been altered in any way.

(2) Except as provided in paragraph (e)(3) of this section, the owner or operator of an affected facility to which an opacity standard in this part applies shall conduct opacity observations in accordance with paragraph (b) of this section, shall record the opacity of emissions, and shall report to the Administrator the opacity results along with the results of the initial performance test required under §60.8. The inability of an owner or operator to

secure a visible emissions observer shall not be considered a reason for not conducting the opacity observations concurrent with the initial performance test.

(3) The owner or operator of an affected facility to which an opacity standard in this part applies may request the Administrator to determine and to record the opacity of emissions from the affected facility during the initial performance test and at such times as may be required. The owner or operator of the affected facility shall report the opacity results. Any request to the Administrator to determine and to record the opacity of emissions from an affected facility shall be included in the notification required in §60.7(a)(6). If, for some reason, the Administrator cannot determine and record the opacity of emissions from the affected facility during the performance test, then the provisions of paragraph (e)(1) of this section shall apply.

(4) An owner or operator of an affected facility using a continuous opacity monitor (transmissometer) shall record the monitoring data produced during the initial performance test required by §60.8 and shall furnish the Administrator a written report of the monitoring results along with Method 9 and §60.8 performance test results.

(5) An owner or operator of an affected facility subject to an opacity standard may submit, for compliance purposes, continuous opacity monitoring system (COMS) data results produced during any performance test required under §60.8 in lieu of Method 9 observation data. If an owner or operator elects to submit COMS data for compliance with the opacity standard, he shall notify the Administrator of that decision, in writing, at least 30 days before any performance test required under §60.8 is conducted. Once the owner or operator of an affected facility has notified the Administrator to that effect, the COMS data results will be used to determine opacity compliance during subsequent tests required under §60.8 until the owner or operator notifies the Administrator, in writing, to the contrary. For the purpose of determining compliance with the opacity standard during a performance test required under §60.8 using COMS data, the minimum total time of COMS data collection shall be averages of all 6-minute continuous periods within the duration of the mass emission performance test. Results of the COMS opacity determinations shall be submitted along with the results of the performance test required under §60.8. The owner or operator of an affected facility using a COMS for compliance purposes is responsible for demonstrating that the COMS meets the requirements specified in §60.13(c) of this part, that the COMS has been properly maintained and operated, and that the resulting data have not been altered in any way. If COMS data results are submitted for compliance with the opacity standard for a period of time during which Method 9 data indicates noncompliance, the Method 9 data will be used to determine compliance with the opacity standard.

(6) Upon receipt from an owner or operator of the written reports of the results of the performance tests required by §60.8, the opacity observation results and observer certification required by §60.11(e)(1), and the COMS results, if applicable, the Administrator will make a finding concerning compliance with opacity and other applicable standards. If COMS data results are used to comply with an opacity standard, only those results are required to be submitted along with the performance test results required by §60.8. If the Administrator finds that an affected facility is in compliance with all applicable standards for which performance tests are conducted in accordance with §60.8 of this part but during the time such performance tests are being conducted fails to meet any applicable opacity standard, he shall notify the owner or operator and advise him that he may petition the Administrator within 10 days of receipt of notification to make appropriate adjustment to the opacity standard for the affected facility.

(7) The Administrator will grant such a petition upon a demonstration by the owner or operator that the affected facility and associated air pollution control equipment was operated and maintained in a manner to minimize the opacity of emissions during the performance tests; that the performance tests were performed under the conditions established by the Administrator; and that the affected facility and associated air pollution control equipment were incapable of being adjusted or operated to meet the applicable opacity standard.

(8) The Administrator will establish an opacity standard for the affected facility meeting the above requirements at a level at which the source will be able, as indicated by the performance and opacity tests, to meet the opacity standard at all times during which the source is meeting the mass or concentration emission standard. The Administrator will promulgate the new opacity standard in the FEDERAL REGISTER.

(f) Special provisions set forth under an applicable subpart shall supersede any conflicting provisions in paragraphs (a) through (e) of this section.

(g) For the purpose of submitting compliance certifications or establishing whether or not a person has violated or is in violation of any standard in this part, nothing in this part shall preclude the use, including the exclusive use, of any credible evidence or information, relevant to whether a source would have been in compliance with applicable requirements if the appropriate performance or compliance test or procedure had been performed.

§60.12 Circumvention.

No owner or operator subject to the provisions of this part shall build, erect, install, or use any article, machine, equipment or process, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with an opacity standard or with a standard which is based on the concentration of a pollutant in the gases discharged to the atmosphere.

§60.13 Monitoring requirements.

(a) For the purposes of this section, all continuous monitoring systems required under applicable subparts shall be subject to the provisions of this section upon promulgation of performance specifications for continuous monitoring systems under appendix B to this part and, if the continuous monitoring system is used to demonstrate compliance with emission limits on a continuous basis, appendix F to this part, unless otherwise specified in an applicable subpart or by the Administrator. Appendix F is applicable December 4, 1987.

(b) All continuous monitoring systems and monitoring devices shall be installed and operational prior to conducting performance tests under §60.8. Verification of operational status shall, as a minimum, include completion of the manufacturer's written requirements or recommendations for installation, operation, and calibration of the device.

(c) If the owner or operator of an affected facility elects to submit continous opacity monitoring system (COMS) data for compliance with the opacity standard as provided under §60.11(e)(5), he shall conduct a performance evaluation of the COMS as specified in Performance Specification 1, appendix B, of this part before the performance test required under §60.8 is conducted. Otherwise, the owner or operator of an affected facility shall conduct a performance evaluation of the COMS or continuous emission monitoring system (CEMS) during any performance test required under §60.8 or within 30 days thereafter in accordance with the applicable performance specification in appendix B of this part, The owner or operator of an affected facility shall conduct COMS or CEMS performance evaluations at such other times as may be required by the Administrator under section 114 of the Act.

(1) The owner or operator of an affected facility using a COMS to determine opacity compliance during any performance test required under §60.8 and as described in §60.11(e)(5) shall furnish the Administrator two or, upon request, more copies of a written report of the results of the COMS performance evaluation described in paragraph (c) of this section at least 10 days before the performance test required under §60.8 is conducted.

(2) Except as provided in paragraph (c)(1) of this section, the owner or operator of an affected facility shall furnish the Administrator within 60 days of completion two or, upon request, more copies of a written report of the results of the performance evaluation.

(d)(1) Owners and operators of a CEMS installed in accordance with the provisions of this part, must check the zero (or low level value between 0 and 20 percent of span value) and span (50 to 100 percent of span value) calibration drifts at least once each operating day in accordance with a written procedure. The zero and span must, at a minimum, be adjusted whenever either the 24-hour zero drift or the 24-hour span drift exceeds two times the limit

of the applicable performance specification in appendix B of this part. The system must allow the amount of the excess zero and span drift to be recorded and quantified whenever specified. Owners and operators of a COMS installed in accordance with the provisions of this part must check the zero and upscale (span) calibration drifts at least once daily. For a particular COMS, the acceptable range of zero and upscale calibration materials is defined in the applicable version of PS-1 in appendix B of this part. For a COMS, the optical surfaces, exposed to the effluent gases, must be cleaned before performing the zero and upscale drift adjustments, except for systems using automatic zero adjustments. The optical surfaces must be cleaned when the cumulative automatic zero compensation exceeds 4 percent opacity.

(2) Unless otherwise approved by the Administrator, the following procedures must be followed for a COMS. Minimum procedures must include an automated method for producing a simulated zero opacity condition and an upscale opacity condition using a certified neutral density filter or other related technique to produce a known obstruction of the light beam. Such procedures must provide a system check of all active analyzer internal optics with power or curvature, all active electronic circuitry including the light source and photodetector assembly, and electronic or electro-mechanical systems and hardware and or software used during normal measurement operation.

(e) Except for system breakdowns, repairs, calibration checks, and zero and span adjustments required under paragraph (d) of this section, all continuous monitoring systems shall be in continuous operation and shall meet minimum frequency of operation requirements as follows:

(1) All continuous monitoring systems referenced by paragraph (c) of this section for measuring opacity of emissions shall complete a minimum of one cycle of sampling and analyzing for each successive 10-second period and one cycle of data recording for each successive 6-minute period.

(2) All continuous monitoring systems referenced by paragraph (c) of this section for measuring emissions, except opacity, shall complete a minimum of one cycle of operation (sampling, analyzing, and data recording) for each successive 15-minute period.

(f) All continuous monitoring systems or monitoring devices shall be installed such that representative measurements of emissions or process parameters from the affected facility are obtained. Additional procedures for location of continuous monitoring systems contained in the applicable Performance Specifications of appendix B of this part shall be used.

(g) When the effluents from a single affected facility or two or more affected facilities subject to the same emission standards are combined before being released to the atmosphere, the owner or operator may install applicable continuous monitoring systems on each effluent or on the combined effluent. When the affected facilities are not subject to the same emission standards, separate continuous monitoring systems shall be installed on each effluent. When the effluent from one affected facility is released to the atmosphere through more than one point, the owner or operator shall install an applicable continuous monitoring system on each separate effluent unless the installation of fewer systems is approved by the Administrator. When more than one continuous monitoring system is used to measure the emissions from one affected facility (e.g., multiple breechings, multiple outlets), the owner or operator shall report the results as required from each continuous monitoring system.

(h)(1) Owners or operators of all continuous monitoring systems for measurement of opacity shall reduce all data to 6-minute averages and for continuous monitoring systems other than opacity to 1-hour averages for time periods as defined in §60.2. Six-minute opacity averages shall be calculated from 36 or more data points equally spaced over each 6-minute period.

(2) For continuous monitoring systems other than opacity, 1-hour averages shall be computed as follows, except that the provisions pertaining to the validation of partial operating hours are only applicable for affected facilities that are required by the applicable subpart to include partial hours in the emission calculations:

(i) Except as provided under paragraph (h)(2)(iii) of this section, for a full operating hour (any clock hour with 60 minutes of unit operation), at least four valid data points are required to calculate the hourly average, *i.e.*, one data point in each of the 15-minute quadrants of the hour.

(ii) Except as provided under paragraph (h)(2)(iii) of this section, for a partial operating hour (any clock hour with less than 60 minutes of unit operation), at least one valid data point in each 15-minute quadrant of the hour in which the unit operates is required to calculate the hourly average.

(iii) For any operating hour in which required maintenance or quality-assurance activities are performed:

(A) If the unit operates in two or more quadrants of the hour, a minimum of two valid data points, separated by at least 15 minutes, is required to calculate the hourly average; or

(B) If the unit operates in only one quadrant of the hour, at least one valid data point is required to calculate the hourly average.

(iv) If a daily calibration error check is failed during any operating hour, all data for that hour shall be invalidated, unless a subsequent calibration error test is passed in the same hour and the requirements of paragraph (h)(2)(iii) of this section are met, based solely on valid data recorded after the successful calibration.

(v) For each full or partial operating hour, all valid data points shall be used to calculate the hourly average.

(vi) Except as provided under paragraph (h)(2)(vii) of this section, data recorded during periods of continuous monitoring system breakdown, repair, calibration checks, and zero and span adjustments shall not be included in the data averages computed under this paragraph.

(vii) Owners and operators complying with the requirements of §60.7(f)(1) or (2) must include any data recorded during periods of monitor breakdown or malfunction in the data averages.

(viii) When specified in an applicable subpart, hourly averages for certain partial operating hours shall not be computed or included in the emission averages (e.g., hours with < 30 minutes of unit operation under §60.47b(d)).

(ix) Either arithmetic or integrated averaging of all data may be used to calculate the hourly averages. The data may be recorded in reduced or nonreduced form (e.g., ppm pollutant and percent O_2 or ng/J of pollutant).

(3) All excess emissions shall be converted into units of the standard using the applicable conversion procedures specified in the applicable subpart. After conversion into units of the standard, the data may be rounded to the same number of significant digits used in the applicable subpart to specify the emission limit.

(i) After receipt and consideration of written application, the Administrator may approve alternatives to any monitoring procedures or requirements of this part including, but not limited to the following:

(1) Alternative monitoring requirements when installation of a continuous monitoring system or monitoring device specified by this part would not provide accurate measurements due to liquid water or other interferences caused by substances in the effluent gases.

(2) Alternative monitoring requirements when the affected facility is infrequently operated.

(3) Alternative monitoring requirements to accommodate continuous monitoring systems that require additional measurements to correct for stack moisture conditions.

(4) Alternative locations for installing continuous monitoring systems or monitoring devices when the owner or operator can demonstrate that installation at alternate locations will enable accurate and representative measurements.

(5) Alternative methods of converting pollutant concentration measurements to units of the standards.

(6) Alternative procedures for performing daily checks of zero and span drift that do not involve use of span gases or test cells.

(7) Alternatives to the A.S.T.M. test methods or sampling procedures specified by any subpart.

(8) Alternative continuous monitoring systems that do not meet the design or performance requirements in Performance Specification 1, appendix B, but adequately demonstrate a definite and consistent relationship between its measurements and the measurements of opacity by a system complying with the requirements in Performance Specification 1. The Administrator may require that such demonstration be performed for each affected facility.

(9) Alternative monitoring requirements when the effluent from a single affected facility or the combined effluent from two or more affected facilities is released to the atmosphere through more than one point.

(j) An alternative to the relative accuracy (RA) test specified in Performance Specification 2 of appendix B may be requested as follows:

(1) An alternative to the reference method tests for determining RA is available for sources with emission rates demonstrated to be less than 50 percent of the applicable standard. A source owner or operator may petition the Administrator to waive the RA test in Section 8.4 of Performance Specification 2 and substitute the procedures in Section 16.0 if the results of a performance test conducted according to the requirements in §60.8 of this subpart or other tests performed following the criteria in §60.8 demonstrate that the emission rate of the pollutant of interest in the units of the applicable standard is less than 50 percent of the applicable standard. For sources subject to standards expressed as control efficiency levels, a source owner or operator may petition the Administrator to waive the RA test and substitute the procedures in Section 16.0 of Performance Specification 2 if the control device exhaust emission rate is less than 50 percent of the level needed to meet the control efficiency requirement. The alternative procedures do not apply if the continuous emission monitoring system is used to determine compliance continuously with the applicable standard. The petition to waive the RA test shall include a detailed description of the procedures to be applied. Included shall be location and procedure for conducting the alternative, the concentration or response levels of the alternative RA materials, and the other equipment checks included in the alternative procedure. The Administrator will review the petition for completeness and applicability. The determination to grant a waiver will depend on the intended use of the CEMS data (e.g., data collection purposes other than NSPS) and may require specifications more stringent than in Performance Specification 2 (e.g., the applicable emission limit is more stringent than NSPS).

(2) The waiver of a CEMS RA test will be reviewed and may be rescinded at such time, following successful completion of the alternative RA procedure, that the CEMS data indicate that the source emissions are approaching the level. The criterion for reviewing the waiver is the collection of CEMS data showing that emissions have exceeded 70 percent of the applicable standard for seven, consecutive, averaging periods as specified by the applicable regulation(s). For sources subject to standards expressed as control efficiency levels, the criterion for reviewing the waiver is the collection of CEMS data showing that exhaust emissions have exceeded 70 percent of the level needed to meet the control efficiency requirement for seven, consecutive, averaging periods as specified by the applicable regulation(s) [e.g., §§60.45(g) (2) and (3), 60.73(e), and 60.84(e)]. It is the responsibility of the source operator to maintain records and determine the level of emissions relative to the criterion on the waiver of RA testing. If this criterion is exceeded, the owner or operator must notify the Administrator within 10 days of such occurrence and include a description of the nature and cause of

the increasing emissions. The Administrator will review the notification and may rescind the waiver and require the owner or operator to conduct a RA test of the CEMS as specified in Section 8.4 of Performance Specification 2.

§60.14 Modification.

(a) Except as provided under paragraphs (e) and (f) of this section, any physical or operational change to an existing facility which results in an increase in the emission rate to the atmosphere of any pollutant to which a standard applies shall be considered a modification within the meaning of section 111 of the Act. Upon modification, an existing facility shall become an affected facility for each pollutant to which a standard applies and for which there is an increase in the emission rate to the atmosphere.

(b) Emission rate shall be expressed as kg/hr of any pollutant discharged into the atmosphere for which a standard is applicable. The Administrator shall use the following to determine emission rate:

(1) Emission factors as specified in the latest issue of "Compilation of Air Pollutant Emission Factors," EPA Publication No. AP-42, or other emission factors determined by the Administrator to be superior to AP-42 emission factors, in cases where utilization of emission factors demonstrates that the emission level resulting from the physical or operational change will either clearly increase or clearly not increase.

(2) Material balances, continuous monitor data, or manual emission tests in cases where utilization of emission factors as referenced in paragraph (b)(1) of this section does not demonstrate to the Administrator's satisfaction whether the emission level resulting from the physical or operational change will either clearly increase or clearly not increase, or where an owner or operator demonstrates to the Administrator's satisfaction that there are reasonable grounds to dispute the result obtained by the Administrator utilizing emission factors as referenced in paragraph (b)(1) of this section. When the emission rate is based on results from manual emission tests or continuous monitoring systems, the procedures specified in appendix C of this part shall be used to determine whether an increase in emission rate has occurred. Tests shall be conducted under such conditions as the Administrator shall specify to the owner or operator based on representative performance of the facility. At least three valid test runs must be conducted before and at least three after the physical or operational change. All operating parameters which may affect emissions must be held constant to the maximum feasible degree for all test runs.

(c) The addition of an affected facility to a stationary source as an expansion to that source or as a replacement for an existing facility shall not by itself bring within the applicability of this part any other facility within that source.

(d) [Reserved]

(e) The following shall not, by themselves, be considered modifications under this part:

(1) Maintenance, repair, and replacement which the Administrator determines to be routine for a source category, subject to the provisions of paragraph (c) of this section and §60.15.

(2) An increase in production rate of an existing facility, if that increase can be accomplished without a capital expenditure on that facility.

(3) An increase in the hours of operation.

(4) Use of an alternative fuel or raw material if, prior to the date any standard under this part becomes applicable to that source type, as provided by §60.1, the existing facility was designed to accommodate that alternative use. A facility shall be considered to be designed to accommodate an alternative fuel or raw material if that use could be accomplished under the facility's construction specifications as amended prior to the change. Conversion to coal required for energy considerations, as specified in section 111(a)(8) of the Act, shall not be considered a modification.

(5) The addition or use of any system or device whose primary function is the reduction of air pollutants, except when an emission control system is removed or is replaced by a system which the Administrator determines to be less environmentally beneficial.

(6) The relocation or change in ownership of an existing facility.

(f) Special provisions set forth under an applicable subpart of this part shall supersede any conflicting provisions of this section.

(g) Within 180 days of the completion of any physical or operational change subject to the control measures specified in paragraph (a) of this section, compliance with all applicable standards must be achieved.

(h) No physical change, or change in the method of operation, at an existing electric utility steam generating unit shall be treated as a modification for the purposes of this section provided that such change does not increase the maximum hourly emissions of any pollutant regulated under this section above the maximum hourly emissions achievable at that unit during the 5 years prior to the change.

(i) Repowering projects that are awarded funding from the Department of Energy as permanent clean coal technology demonstration projects (or similar projects funded by EPA) are exempt from the requirements of this section provided that such change does not increase the maximum hourly emissions of any pollutant regulated under this section above the maximum hourly emissions achievable at that unit during the five years prior to the change.

(j)(1) Repowering projects that qualify for an extension under section 409(b) of the Clean Air Act are exempt from the requirements of this section, provided that such change does not increase the actual hourly emissions of any pollutant regulated under this section above the actual hourly emissions achievable at that unit during the 5 years prior to the change.

(2) This exemption shall not apply to any new unit that:

(i) Is designated as a replacement for an existing unit;

(ii) Qualifies under section 409(b) of the Clean Air Act for an extension of an emission limitation compliance date under section 405 of the Clean Air Act; and

(iii) Is located at a different site than the existing unit.

(k) The installation, operation, cessation, or removal of a temporary clean coal technology demonstration project is exempt from the requirements of this section. A *temporary clean coal control technology demonstration project,* for the purposes of this section is a clean coal technology demonstration project that is operated for a period of 5 years or less, and which complies with the State implementation plan for the State in which the project is located and other requirements necessary to attain and maintain the national ambient air quality standards during the project and after it is terminated.

(l) The reactivation of a very clean coal-fired electric utility steam generating unit is exempt from the requirements of this section.

§60.15 Reconstruction.

(a) An existing facility, upon reconstruction, becomes an affected facility, irrespective of any change in emission rate.

(b) "Reconstruction" means the replacement of components of an existing facility to such an extent that:

(1) The fixed capital cost of the new components exceeds 50 percent of the fixed capital cost that would be required to construct a comparable entirely new facility, and

(2) It is technologically and economically feasible to meet the applicable standards set forth in this part.

(c) "Fixed capital cost" means the capital needed to provide all the depreciable components.

(d) If an owner or operator of an existing facility proposes to replace components, and the fixed capital cost of the new components exceeds 50 percent of the fixed capital cost that would be required to construct a comparable entirely new facility, he shall notify the Administrator of the proposed replacements. The notice must be postmarked 60 days (or as soon as practicable) before construction of the replacements is commenced and must include the following information:

(1) Name and address of the owner or operator.

(2) The location of the existing facility.

(3) A brief description of the existing facility and the components which are to be replaced.

(4) A description of the existing air pollution control equipment and the proposed air pollution control equipment.

(5) An estimate of the fixed capital cost of the replacements and of constructing a comparable entirely new facility.

(6) The estimated life of the existing facility after the replacements.

(7) A discussion of any economic or technical limitations the facility may have in complying with the applicable standards of performance after the proposed replacements.

(e) The Administrator will determine, within 30 days of the receipt of the notice required by paragraph (d) of this section and any additional information he may reasonably require, whether the proposed replacement constitutes reconstruction.

(f) The Administrator's determination under paragraph (e) shall be based on:

(1) The fixed capital cost of the replacements in comparison to the fixed capital cost that would be required to construct a comparable entirely new facility;

(2) The estimated life of the facility after the replacements compared to the life of a comparable entirely new facility;

(3) The extent to which the components being replaced cause or contribute to the emissions from the facility; and

(4) Any economic or technical limitations on compliance with applicable standards of performance which are inherent in the proposed replacements.

(g) Individual subparts of this part may include specific provisions which refine and delimit the concept of reconstruction set forth in this section.

§60.16 Priority list.

Prioritized Major Source Categories

Priority Number[1]	***Source Category***
1.	Synthetic Organic Chemical Manufacturing Industry (SOCMI) and Volatile Organic Liquid Storage Vessels and Handling Equipment
	(a) SOCMI unit processes
	(b) Volatile organic liquid (VOL) storage vessels and handling equipment

	(c) SOCMI fugitive sources
	(d) SOCMI secondary sources
2.	Industrial Surface Coating: Cans
3.	Petroleum Refineries: Fugitive Sources
4.	Industrial Surface Coating: Paper
5.	Dry Cleaning
	(a) Perchloroethylene
	(b) Petroleum solvent
6.	Graphic Arts
7.	Polymers and Resins: Acrylic Resins
8.	Mineral Wool (Deleted)
9.	Stationary Internal Combustion Engines
10.	Industrial Surface Coating: Fabric
11.	Industrial-Commercial-Institutional Steam Generating Units.
12.	Incineration: Non-Municipal (Deleted)
13.	Non-Metallic Mineral Processing
14.	Metallic Mineral Processing
15.	Secondary Copper (Deleted)
16.	Phosphate Rock Preparation
17.	Foundries: Steel and Gray Iron
18.	Polymers and Resins: Polyethylene
19.	Charcoal Production
20.	Synthetic Rubber
	(a) Tire manufacture
	(b) SBR production
21.	Vegetable Oil
22.	Industrial Surface Coating: Metal Coil
23.	Petroleum Transportation and Marketing
24.	By-Product Coke Ovens

25.	Synthetic Fibers
26.	Plywood Manufacture
27.	Industrial Surface Coating: Automobiles
28.	Industrial Surface Coating: Large Appliances
29.	Crude Oil and Natural Gas Production
30.	Secondary Aluminum
31.	Potash (Deleted)
32.	Lightweight Aggregate Industry: Clay, Shale, and Slate[2]
33.	Glass
34.	Gypsum
35.	Sodium Carbonate
36.	Secondary Zinc (Deleted)
37.	Polymers and Resins: Phenolic
38.	Polymers and Resins: Urea-Melamine
39.	Ammonia (Deleted)
40.	Polymers and Resins: Polystyrene
41.	Polymers and Resins: ABS-SAN Resins
42.	Fiberglass
43.	Polymers and Resins: Polypropylene
44.	Textile Processing
45.	Asphalt Processing and Asphalt Roofing Manufacture
46.	Brick and Related Clay Products
47.	Ceramic Clay Manufacturing (Deleted)
48.	Ammonium Nitrate Fertilizer
49.	Castable Refractories (Deleted)
50.	Borax and Boric Acid (Deleted)
51.	Polymers and Resins: Polyester Resins
52.	Ammonium Sulfate
53.	Starch

54.	Perlite
55.	Phosphoric Acid: Thermal Process (Deleted)
56.	Uranium Refining
57.	Animal Feed Defluorination (Deleted)
58.	Urea (for fertilizer and polymers)
59.	Detergent (Deleted)
Other Source Categories	
Lead acid battery manufacture[3]	
Organic solvent cleaning[3]	
Industrial surface coating: metal furniture[3]	
Stationary gas turbines[4]	
Municipal solid waste landfills[4]	

[1]Low numbers have highest priority, e.g., No. 1 is high priority, No. 59 is low priority.

[2]Formerly titled "Sintering: Clay and Fly Ash".

[3]Minor source category, but included on list since an NSPS is being developed for that source category.

[4]Not prioritized, since an NSPS for this major source category has already been promulgated.

§60.17 Incorporations by reference.

(a) Certain material is incorporated by reference into this part with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. To enforce any edition other than that specified in this section, the EPA must publish notice of change in the FEDERAL REGISTER and the material must be available to the public. All approved material is available for inspection at the EPA Docket Center, Public Reading Room, EPA WJC West, Room 3334, 1301 Constitution Ave. NW., Washington, DC, telephone number 202-566-1744, and is available from the sources listed below. It is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741-6030 or go to *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

(8) ASTM A482-76, Standard Specification for Ferrochromesilicon, IBR approved for §60.261.

(9) ASTM A482-93, Standard Specification for Ferrochromesilicon, IBR approved for §60.261.

(10) ASTM A483-64, Standard Specification for Silicomanganese, IBR approved for §60.261.

(11) ASTM A483-74 (Reapproved 1988), Standard Specification for Silicomanganese, IBR approved for §60.261.

(12) ASTM A495-76, Standard Specification for Calcium-Silicon and Calcium Manganese-Silicon, IBR approved for §60.261.

(13) ASTM A495-94, Standard Specification for Calcium-Silicon and Calcium Manganese-Silicon, IBR approved for §60.261.

(14) ASTM D86-78, Distillation of Petroleum Products, IBR approved for §§60.562-2(d), 60.593(d), 60.593a(d), 60.633(h).

(15) ASTM D86-82, Distillation of Petroleum Products, IBR approved for §§60.562-2(d), 60.593(d), 60.593a(d), 60.633(h).

(16) ASTM D86-90, Distillation of Petroleum Products, IBR approved for §§60.562-2(d), 60.593(d), 60.593a(d), 60.633(h).

(17) ASTM D86-93, Distillation of Petroleum Products, IBR approved for §§60.562-2(d), 60.593(d), 60.593a(d), 60.633(h).

(18) ASTM D86-95, Distillation of Petroleum Products, IBR approved for §§60.562-2(d), 60.593(d), 60.593a(d), 60.633(h).

(19) ASTM D86-96, Distillation of Petroleum Products, (Approved April 10, 1996), IBR approved for §§60.562-2(d), 60.593(d), 60.593a(d), 60.633(h), 60.5401(f), 60.5401a(f).

(20) ASTM D129-64, Standard Test Method for Sulfur in Petroleum Products (General Bomb Method), IBR approved for §§60.106(j) and appendix A-7 to part 60: Method 19, Section 12.5.2.2.3.

(21) ASTM D129-78, Standard Test Method for Sulfur in Petroleum Products (General Bomb Method), IBR approved for §§60.106(j) and appendix A-7 to part 60: Method 19, Section 12.5.2.2.3.

(22) ASTM D129-95, Standard Test Method for Sulfur in Petroleum Products (General Bomb Method), IBR approved for §§60.106(j) and appendix A-7 to part 60: Method 19, Section 12.5.2.2.3.

(23) ASTM D129-00, Standard Test Method for Sulfur in Petroleum Products (General Bomb Method), IBR approved for §60.335(b).

(24) ASTM D129-00 (Reapproved 2005), Standard Test Method for Sulfur in Petroleum Products (General Bomb Method), IBR approved for §60.4415(a).

(25) ASTM D240-76, Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter, IBR approved for §§60.46(c), 60.296(b), and appendix A-7 to part 60: Method 19, Section 12.5.2.2.3.

(26) ASTM D240-92, Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter, IBR approved for §§60.46(c), 60.296(b), and appendix A-7: Method 19, Section 12.5.2.2.3.

(27) ASTM D240-02 (Reapproved 2007), Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter, (Approved May 1, 2007), IBR approved for §60.107a(d).

(28) ASTM D270-65, Standard Method of Sampling Petroleum and Petroleum Products, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.2.1.

(29) ASTM D270-75, Standard Method of Sampling Petroleum and Petroleum Products, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.2.1.

(30) ASTM D323-82, Test Method for Vapor Pressure of Petroleum Products (Reid Method), IBR approved for §§60.111(l), 60.111a(g), 60.111b, and 60.116b(f).

(31) ASTM D323-94, Test Method for Vapor Pressure of Petroleum Products (Reid Method), IBR approved for §§60.111(l), 60.111a(g), 60.111b, and 60.116b(f).

(32) ASTM D388-77, Standard Specification for Classification of Coals by Rank, IBR approved for §§60.41, 60.45(f), 60.41Da, 60.41b, 60.41c, and 60.251.

(33) ASTM D388-90, Standard Specification for Classification of Coals by Rank, IBR approved for §§60.41, 60.45(f), 60.41Da, 60.41b, 60.41c, and 60.251.

(34) ASTM D388-91, Standard Specification for Classification of Coals by Rank, IBR approved for §§60.41, 60.45(f), 60.41Da, 60.41b, 60.41c, and 60.251.

(35) ASTM D388-95, Standard Specification for Classification of Coals by Rank, IBR approved for §§60.41, 60.45(f), 60.41Da, 60.41b, 60.41c, and 60.251.

(36) ASTM D388-98a, Standard Specification for Classification of Coals by Rank, IBR approved for §§60.41, 60.45(f), 60.41Da, 60.41b, 60.41c, and 60.251.

(37) ASTM D388-99 (Reapproved 2004)$^{\epsilon 1}$Standard Classification of Coals by Rank, IBR approved for §§60.41, 60.45(f), 60.41Da, 60.41b, 60.41c, 60.251, and 60.5580.

(38) ASTM D396-78, Standard Specification for Fuel Oils, IBR approved for §§60.41b, 60.41c, 60.111(b), and 60.111a(b).

(39) ASTM D396-89, Standard Specification for Fuel Oils, IBR approved for §§60.41b, 60.41c, 60.111(b), and 60.111a(b).

(40) ASTM D396-90, Standard Specification for Fuel Oils, IBR approved for §§60.41b, 60.41c, 60.111(b), and 60.111a(b).

(41) ASTM D396-92, Standard Specification for Fuel Oils, IBR approved for §§60.41b, 60.41c, 60.111(b), and 60.111a(b).

(42) ASTM D396-98, Standard Specification for Fuel Oils, IBR approved for §§60.41b, 60.41c, 60.111(b), 60.111a(b), and 60.5580.

(43) ASTM D975-78, Standard Specification for Diesel Fuel Oils, IBR approved for §§60.111(b) and 60.111a(b).

(44) ASTM D975-96, Standard Specification for Diesel Fuel Oils, IBR approved for §§60.111(b) and 60.111a(b).

(45) ASTM D975-98a, Standard Specification for Diesel Fuel Oils, IBR approved for §§60.111(b) and 60.111a(b).

(46) ASTM D975-08a, Standard Specification for Diesel Fuel Oils, IBR approved for §§60.41b 60.41c, and 60.5580.

(47) ASTM D1072-80, Standard Test Method for Total Sulfur in Fuel Gases, IBR approved for §60.335(b).

(48) ASTM D1072-90 (Reapproved 1994), Standard Test Method for Total Sulfur in Fuel Gases, IBR approved for §60.335(b).

(49) ASTM D1072-90 (Reapproved 1999), Standard Test Method for Total Sulfur in Fuel Gases, IBR approved for §60.4415(a).

(50) ASTM D1137-53, Standard Method for Analysis of Natural Gases and Related Types of Gaseous Mixtures by the Mass Spectrometer, IBR approved for §60.45(f).

(51) ASTM D1137-75, Standard Method for Analysis of Natural Gases and Related Types of Gaseous Mixtures by the Mass Spectrometer, IBR approved for §60.45(f).

(52) ASTM D1193-77, Standard Specification for Reagent Water, IBR approved for appendix A-3 to part 60: Method 5, Section 7.1.3; Method 5E, Section 7.2.1; Method 5F, Section 7.2.1; appendix A-4 to part 60: Method 6, Section 7.1.1; Method 7, Section 7.1.1; Method 7C, Section 7.1.1; Method 7D, Section 7.1.1; Method 10A, Section 7.1.1; appendix A-5 to part 60: Method 11, Section 7.1.3; Method 12, Section 7.1.3; Method 13A, Section 7.1.2; appendix A-8 to part 60: Method 26, Section 7.1.2; Method 26A, Section 7.1.2; and Method 29, Section 7.2.2.

(53) ASTM D1193-91, Standard Specification for Reagent Water, IBR approved for appendix A-3 to part 60: Method 5, Section 7.1.3; Method 5E, Section 7.2.1; Method 5F, Section 7.2.1; appendix A-4 to part 60: Method 6, Section 7.1.1; Method 7, Section 7.1.1; Method 7C, Section 7.1.1; Method 7D, Section 7.1.1; Method 10A, Section 7.1.1; appendix A-5 to part 60: Method 11, Section 7.1.3; Method 12, Section 7.1.3; Method 13A, Section 7.1.2; appendix A-8 to part 60: Method 26, Section 7.1.2; Method 26A, Section 7.1.2; and Method 29, Section 7.2.2.

(54) ASTM D1266-87, Standard Test Method for Sulfur in Petroleum Products (Lamp Method), IBR approved for §§60.106(j) and 60.335(b).

(55) ASTM D1266-91, Standard Test Method for Sulfur in Petroleum Products (Lamp Method), IBR approved for §§60.106(j) and 60.335(b).

(56) ASTM D1266-98, Standard Test Method for Sulfur in Petroleum Products (Lamp Method), IBR approved for §§60.106(j) and 60.335(b).

(57) ASTM D1266-98 (Reapproved 2003)$^{\varepsilon 1}$ Standard Test Method for Sulfur in Petroleum Products (Lamp Method), IBR approved for §60.4415(a).

(58) ASTM D1475-60 (Reapproved 1980), Standard Test Method for Density of Paint, Varnish Lacquer, and Related Products, IBR approved for §60.435(d), appendix A-8 to part 60: Method 24, Section 6.1; and Method 24A, Sections 6.5 and 7.1.

(59) ASTM D1475-90, Standard Test Method for Density of Paint, Varnish Lacquer, and Related Products, IBR approved for §60.435(d), appendix A-8 to part 60: Method 24, Section 6.1; and Method 24A, §§6.5 and 7.1.

(60) ASTM D1552-83, Standard Test Method for Sulfur in Petroleum Products (High-Temperature Method), IBR approved for §§60.106(j), 60.335(b), and appendix A-7 to part 60: Method 19, Section 12.5.2.2.3.

(61) ASTM D1552-95, Standard Test Method for Sulfur in Petroleum Products (High-Temperature Method), IBR approved for §§60.106(j), 60.335(b), and appendix A-7 to part 60: Method 19, Section 12.5.2.2.3.

(62) ASTM D1552-01, Standard Test Method for Sulfur in Petroleum Products (High-Temperature Method), IBR approved for §§60.106(j), 60.335(b), and appendix A-7 to part 60: Method 19, Section 12.5.2.2.3.

(63) ASTM D1552-03, Standard Test Method for Sulfur in Petroleum Products (High-Temperature Method), IBR approved for §60.4415(a).

(64) ASTM D1826-77, Standard Test Method for Calorific Value of Gases in Natural Gas Range by Continuous Recording Calorimeter, IBR approved for §§60.45(f), 60.46(c), 60.296(b), and appendix A-7 to part 60: Method 19, Section 12.3.2.4.

(65) ASTM D1826-94, Standard Test Method for Calorific Value of Gases in Natural Gas Range by Continuous Recording Calorimeter, IBR approved for §§60.45(f), 60.46(c), 60.296(b), and appendix A-7 to part 60: Method 19, Section 12.3.2.4.

(66) ASTM D1826-94 (Reapproved 2003), Standard Test Method for Calorific (Heating) Value of Gases in Natural Gas Range by Continuous Recording Calorimeter, (Approved May 10, 2003), IBR approved for §60.107a(d).

(67) ASTM D1835-87, Standard Specification for Liquefied Petroleum (LP) Gases, IBR approved for §§60.41Da, 60.41b, and 60.41c.

(68) ASTM D1835-91, Standard Specification for Liquefied Petroleum (LP) Gases, IBR approved for §§60.41Da, 60.41b, and 60.41c.

(69) ASTM D1835-97, Standard Specification for Liquefied Petroleum (LP) Gases, IBR approved for §§60.41Da, 60.41b, and 60.41c.

(70) ASTM D1835-03a, Standard Specification for Liquefied Petroleum (LP) Gases, IBR approved for §§60.41Da, 60.41b, and 60.41c.

(71) ASTM D1945-64, Standard Method for Analysis of Natural Gas by Gas Chromatography, IBR approved for §60.45(f).

(72) ASTM D1945-76, Standard Method for Analysis of Natural Gas by Gas Chromatography, IBR approved for §60.45(f).

(73) ASTM D1945-91, Standard Method for Analysis of Natural Gas by Gas Chromatography, IBR approved for §60.45(f).

(74) ASTM D1945-96, Standard Method for Analysis of Natural Gas by Gas Chromatography, IBR approved for §60.45(f).

(75) ASTM D1945-03 (Reapproved 2010), Standard Method for Analysis of Natural Gas by Gas Chromatography, (Approved January 1, 2010), IBR approved for §§60.107a(d), 60.5413(d), 60.5413a(d).

(76) ASTM D1946-77, Standard Method for Analysis of Reformed Gas by Gas Chromatography, IBR approved for §§60.18(f), 60.45(f), 60.564(f), 60.614(e), 60.664(e), and 60.704(d).

(77) ASTM D1946-90 (Reapproved 1994), Standard Method for Analysis of Reformed Gas by Gas Chromatography, IBR approved for §§60.18(f), 60.45(f), 60.564(f), 60.614(e), 60.664(e), and 60.704(d).

(78) ASTM D1946-90 (Reapproved 2006), Standard Method for Analysis of Reformed Gas by Gas Chromatography, (Approved June 1, 2006), IBR approved for §60.107a(d).

(79) ASTM D2013-72, Standard Method of Preparing Coal Samples for Analysis, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(80) ASTM D2013-86, Standard Method of Preparing Coal Samples for Analysis, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(81) ASTM D2015-77 (Reapproved 1978), Standard Test Method for Gross Calorific Value of Solid Fuel by the Adiabatic Bomb Calorimeter, IBR approved for §§60.45(f), 60.46(c), and appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(82) ASTM D2015-96, Standard Test Method for Gross Calorific Value of Solid Fuel by the Adiabatic Bomb Calorimeter, IBR approved for §§60.45(f), 60.46(c), and appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(83) ASTM D2016-74, Standard Test Methods for Moisture Content of Wood, IBR approved for appendix A-8 to part 60: Method 28, Section 16.1.1.

(84) ASTM D2016-83, Standard Test Methods for Moisture Content of Wood, IBR approved for appendix A-8 to part 60: Method 28, Section 16.1.1.

(85) ASTM D2234-76, Standard Methods for Collection of a Gross Sample of Coal, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.1.

(86) ASTM D2234-96, Standard Methods for Collection of a Gross Sample of Coal, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.1.

(87) ASTM D2234-97b, Standard Methods for Collection of a Gross Sample of Coal, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.1.

(88) ASTM D2234-98, Standard Methods for Collection of a Gross Sample of Coal, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.1.

(89) ASTM D2369-81, Standard Test Method for Volatile Content of Coatings, IBR approved for appendix A-8 to part 60: Method 24, Section 6.2.

(90) ASTM D2369-87, Standard Test Method for Volatile Content of Coatings, IBR approved for appendix A-8 to part 60: Method 24, Section 6.2.

(91) ASTM D2369-90, Standard Test Method for Volatile Content of Coatings, IBR approved for appendix A-8 to part 60: Method 24, Section 6.2.

(92) ASTM D2369-92, Standard Test Method for Volatile Content of Coatings, IBR approved for appendix A-8 to part 60: Method 24, Section 6.2.

(93) ASTM D2369-93, Standard Test Method for Volatile Content of Coatings, IBR approved for appendix A-8 to part 60: Method 24, Section 6.2.

(94) ASTM D2369-95, Standard Test Method for Volatile Content of Coatings, IBR approved for appendix A-8 to part 60: Method 24, Section 6.2.

(95) ASTM D2382-76, Heat of Combustion of Hydrocarbon Fuels by Bomb Calorimeter (High-Precision Method), IBR approved for §§60.18(f), 60.485(g), 60.485a(g), 60.564(f), 60.614(e), 60.664(e), and 60.704(d).

(96) ASTM D2382-88, Heat of Combustion of Hydrocarbon Fuels by Bomb Calorimeter (High-Precision Method), IBR approved for §§60.18(f), 60.485(g), 60.485a(g), 60.564(f), 60.614(e), 60.664(e), and 60.704(d).

(97) ASTM D2504-67, Noncondensable Gases in C3 and Lighter Hydrocarbon Products by Gas Chromatography, IBR approved for §§60.485(g) and 60.485a(g).

(98) ASTM D2504-77, Noncondensable Gases in C3 and Lighter Hydrocarbon Products by Gas Chromatography, IBR approved for §§60.485(g) and 60.485a(g).

(99) ASTM D2504-88 (Reapproved 1993), Noncondensable Gases in C3 and Lighter Hydrocarbon Products by Gas Chromatography, IBR approved for §§60.485(g) and 60.485a(g).

(100) ASTM D2584-68(Reapproved 1985), Standard Test Method for Ignition Loss of Cured Reinforced Resins, IBR approved for §60.685(c).

(101) ASTM D2584-94, Standard Test Method for Ignition Loss of Cured Reinforced Resins, IBR approved for §60.685(c).

(102) ASTM D2597-94 (Reapproved 1999), Standard Test Method for Analysis of Demethanized Hydrocarbon Liquid Mixtures Containing Nitrogen and Carbon Dioxide by Gas Chromatography, IBR approved for §60.335(b).

(103) ASTM D2622-87, Standard Test Method for Sulfur in Petroleum Products by Wavelength Dispersive X-Ray Fluorescence Spectrometry, IBR approved for §§60.106(j) and 60.335(b).

(104) ASTM D2622-94, Standard Test Method for Sulfur in Petroleum Products by Wavelength Dispersive X-Ray Fluorescence Spectrometry, IBR approved for §§60.106(j) and 60.335(b).

(105) ASTM D2622-98, Standard Test Method for Sulfur in Petroleum Products by Wavelength Dispersive X-Ray Fluorescence Spectrometry, IBR approved for §§60.106(j) and 60.335(b).

(106) ASTM D2622-05, Standard Test Method for Sulfur in Petroleum Products by Wavelength Dispersive X-Ray Fluorescence Spectrometry, IBR approved for §60.4415(a).

(107) ASTM D2879-83Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope, IBR approved for §§60.111b(f)(3), 60.116b(e), 60.116b(f), 60.485(e), and 60.485a(e).

(108) ASTM D2879-96, Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope, IBR approved for §§60.111b(f)(3), 60.116b(e), 60.116b(f), 60.485(e), and 60.485a(e).

(109) ASTM D2879-97, Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope, IBR approved for §§60.111b(f)(3), 60.116b(e), 60.116b(f), 60.485(e), and 60.485a(e).

(110) ASTM D2880-78, Standard Specification for Gas Turbine Fuel Oils, IBR approved for §§60.111(b), 60.111a(b), and 60.335(d).

(111) ASTM D2880-96, Standard Specification for Gas Turbine Fuel Oils, IBR approved for §§60.111(b), 60.111a(b), and 60.335(d).

(112) ASTM D2908-74, Standard Practice for Measuring Volatile Organic Matter in Water by Aqueous-Injection Gas Chromatography, IBR approved for §60.564(j).

(113) ASTM D2908-91, Standard Practice for Measuring Volatile Organic Matter in Water by Aqueous-Injection Gas Chromatography, IBR approved for §60.564(j).

(114) ASTM D2986-71, Standard Method for Evaluation of Air, Assay Media by the Monodisperse DOP (Dioctyl Phthalate) Smoke Test, IBR approved for appendix A-3 to part 60: Method 5, Section 7.1.1; appendix A-5 to part 60: Method 12, Section 7.1.1; and Method 13A, Section 7.1.1.2.

(115) ASTM D2986-78, Standard Method for Evaluation of Air, Assay Media by the Monodisperse DOP (Dioctyl Phthalate) Smoke Test, IBR approved for appendix A-3 to part 60: Method 5, Section 7.1.1; appendix A-5 to part 60: Method 12, Section 7.1.1; and Method 13A, Section 7.1.1.2.

(116) ASTM D2986-95a, Standard Method for Evaluation of Air, Assay Media by the Monodisperse DOP (Dioctyl Phthalate) Smoke Test, IBR approved for appendix A-3 to part 60: Method 5, Section 7.1.1; appendix A-5 to part 60: Method 12, Section 7.1.1; and Method 13A, Section 7.1.1.2.

(117) ASTM D3173-73, Standard Test Method for Moisture in the Analysis Sample of Coal and Coke, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(118) ASTM D3173-87, Standard Test Method for Moisture in the Analysis Sample of Coal and Coke, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(119) ASTM D3176-74, Standard Method for Ultimate Analysis of Coal and Coke, IBR approved for §60.45(f)(5)(i) and appendix A-7 to part 60: Method 19, Section 12.3.2.3.

(120) ASTM D3176-89, Standard Method for Ultimate Analysis of Coal and Coke, IBR approved for §60.45(f)(5)(i) and appendix A-7 to part 60: Method 19, Section 12.3.2.3.

(121) ASTM D3177-75, Standard Test Method for Total Sulfur in the Analysis Sample of Coal and Coke, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(122) ASTM D3177-89, Standard Test Method for Total Sulfur in the Analysis Sample of Coal and Coke, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(123) ASTM D3178-73 (Reapproved 1979), Standard Test Methods for Carbon and Hydrogen in the Analysis Sample of Coal and Coke, IBR approved for §60.45(f).

(124) ASTM D3178-89, Standard Test Methods for Carbon and Hydrogen in the Analysis Sample of Coal and Coke, IBR approved for §60.45(f).

(125) ASTM D3246-81, Standard Test Method for Sulfur in Petroleum Gas by Oxidative Microcoulometry, IBR approved for §60.335(b).

(126) ASTM D3246-92, Standard Test Method for Sulfur in Petroleum Gas by Oxidative Microcoulometry, IBR approved for §60.335(b).

(127) ASTM D3246-96, Standard Test Method for Sulfur in Petroleum Gas by Oxidative Microcoulometry, IBR approved for §60.335(b).

(128) ASTM D3246-05, Standard Test Method for Sulfur in Petroleum Gas by Oxidative Microcoulometry, IBR approved for §60.4415(a)(1).

(129) ASTM D3270-73T, Standard Test Methods for Analysis for Fluoride Content of the Atmosphere and Plant Tissues (Semiautomated Method), IBR approved for appendix A-5 to part 60: Method 13A, Section 16.1.

(130) ASTM D3270-80, Standard Test Methods for Analysis for Fluoride Content of the Atmosphere and Plant Tissues (Semiautomated Method), IBR approved for appendix A-5 to part 60: Method 13A, Section 16.1.

(131) ASTM D3270-91, Standard Test Methods for Analysis for Fluoride Content of the Atmosphere and Plant Tissues (Semiautomated Method), IBR approved for appendix A-5 to part 60: Method 13A, Section 16.1.

(132) ASTM D3270-95, Standard Test Methods for Analysis for Fluoride Content of the Atmosphere and Plant Tissues (Semiautomated Method), IBR approved for appendix A-5 to part 60: Method 13A, Section 16.1.

(133) ASTM D3286-85, Standard Test Method for Gross Calorific Value of Coal and Coke by the Isoperibol Bomb Calorimeter, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(134) ASTM D3286-96, Standard Test Method for Gross Calorific Value of Coal and Coke by the Isoperibol Bomb Calorimeter, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(135) ASTM D3370-76, Standard Practices for Sampling Water, IBR approved for §60.564(j).

(136) ASTM D3370-95a, Standard Practices for Sampling Water, IBR approved for §60.564(j).

(137) ASTM D3588-98 (Reapproved 2003), Standard Practice for Calculating Heat Value, Compressibility Factor, and Relative Density of Gaseous Fuels, (Approved May 10, 2003), IBR approved for §§60.107a(d), 60.5413(d), and 60.5413a(d).

(138) ASTM D3699-08, Standard Specification for Kerosine, including Appendix X1, (Approved September 1, 2008), IBR approved for §§60.41b, 60.41c, and 60.5580.

(139) ASTM D3792-79, Standard Test Method for Water Content of Water-Reducible Paints by Direct Injection into a Gas Chromatograph, IBR approved for appendix A-7 to part 60: Method 24, Section 6.3.

(140) ASTM D3792-91, Standard Test Method for Water Content of Water-Reducible Paints by Direct Injection into a Gas Chromatograph, IBR approved for appendix A-7 to part 60: Method 24, Section 6.3.

(141) ASTM D4017-81, Standard Test Method for Water in Paints and Paint Materials by the Karl Fischer Titration Method, IBR approved for appendix A-7 to part 60: Method 24, Section 6.4.

(142) ASTM D4017-90, Standard Test Method for Water in Paints and Paint Materials by the Karl Fischer Titration Method, IBR approved for appendix A-7 to part 60: Method 24, Section 6.4.

(143) ASTM D4017-96a, Standard Test Method for Water in Paints and Paint Materials by the Karl Fischer Titration Method, IBR approved for appendix A-7 to part 60: Method 24, Section 6.4.

(144) ASTM D4057-81, Standard Practice for Manual Sampling of Petroleum and Petroleum Products, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.2.3.

(145) ASTM D4057-95, Standard Practice for Manual Sampling of Petroleum and Petroleum Products, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.2.3.

(146) ASTM D4057-95 (Reapproved 2000), Standard Practice for Manual Sampling of Petroleum and Petroleum Products, IBR approved for §60.4415(a).

(147) ASTM D4084-82, Standard Test Method for Analysis of Hydrogen Sulfide in Gaseous Fuels (Lead Acetate Reaction Rate Method), IBR approved for §60.334(h).

(148) ASTM D4084-94, Standard Test Method for Analysis of Hydrogen Sulfide in Gaseous Fuels (Lead Acetate Reaction Rate Method), IBR approved for §60.334(h).

(149) ASTM D4084-05, Standard Test Method for Analysis of Hydrogen Sulfide in Gaseous Fuels (Lead Acetate Reaction Rate Method), IBR approved for §§60.4360 and 60.4415(a).

(150) ASTM D4177-95, Standard Practice for Automatic Sampling of Petroleum and Petroleum Products, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.2.1.

(151) ASTM D4177-95 (Reapproved 2000), Standard Practice for Automatic Sampling of Petroleum and Petroleum Products, IBR approved for §60.4415(a).

(152) ASTM D4239-85, Standard Test Methods for Sulfur in the Analysis Sample of Coal and Coke Using High Temperature Tube Furnace Combustion Methods, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(153) ASTM D4239-94, Standard Test Methods for Sulfur in the Analysis Sample of Coal and Coke Using High Temperature Tube Furnace Combustion Methods, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(154) ASTM D4239-97, Standard Test Methods for Sulfur in the Analysis Sample of Coal and Coke Using High Temperature Tube Furnace Combustion Methods, IBR approved for appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(155) ASTM D4294-02, Standard Test Method for Sulfur in Petroleum and Petroleum Products by Energy-Dispersive X-Ray Fluorescence Spectrometry, IBR approved for §60.335(b).

(156) ASTM D4294-03, Standard Test Method for Sulfur in Petroleum and Petroleum Products by Energy-Dispersive X-Ray Fluorescence Spectrometry, IBR approved for §60.4415(a).

(157) ASTM D4442-84, Standard Test Methods for Direct Moisture Content Measurement in Wood and Wood-base Materials, IBR approved for appendix A-8 to part 60: Method 28, Section 16.1.1.

(158) ASTM D4442-92, Standard Test Methods for Direct Moisture Content Measurement in Wood and Wood-base Materials, IBR approved for appendix A-8 to part 60: Method 28, Section 16.1.1.

(159) ASTM D4444-92, Standard Test Methods for Use and Calibration of Hand-Held Moisture Meters, IBR approved for appendix A-8 to part 60: Method 28, Section 16.1.1.

(160) ASTM D4457-85 (Reapproved 1991), Test Method for Determination of Dichloromethane and 1,1,1-Trichloroethane in Paints and Coatings by Direct Injection into a Gas Chromatograph, IBR approved for appendix A-7 to part 60: Method 24, Section 6.5.

(161) ASTM D4468-85 (Reapproved 2000), Standard Test Method for Total Sulfur in Gaseous Fuels by Hydrogenolysis and Rateometric Colorimetry, IBR approved for §§60.335(b) and 60.4415(a).

(162) ASTM D4468-85 (Reapproved 2006), Standard Test Method for Total Sulfur in Gaseous Fuels by Hydrogenolysis and Rateometric Colorimetry, (Approved June 1, 2006), IBR approved for §60.107a(e).

(163) ASTM D4629-02, Standard Test Method for Trace Nitrogen in Liquid Petroleum Hydrocarbons by Syringe/Inlet Oxidative Combustion and Chemiluminescence Detection, IBR approved for §§60.49b(e) and 60.335(b).

(164) ASTM D4809-95, Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter (Precision Method), IBR approved for §§60.18(f), 60.485(g), 60.485a(g), 60.564(f), 60.614(d), 60.664(e), and 60.704(d).

(165) ASTM D4809-06, Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter (Precision Method), (Approved December 1, 2006), IBR approved for §60.107a(d).

(166) ASTM D4810-88 (Reapproved 1999), Standard Test Method for Hydrogen Sulfide in Natural Gas Using Length of Stain Detector Tubes, IBR approved for §§60.4360 and 60.4415(a).

(167) ASTM D4891-89 (Reapproved 2006) Standard Test Method for Heating Value of Gases in Natural Gas Range by Stoichiometric Combustion, (Approved June 1, 2006), IBR approved for §§60.107a(d), 60.5413(d), and 60.5413a(d).

(168) ASTM D5287-97 (Reapproved 2002), Standard Practice for Automatic Sampling of Gaseous Fuels, IBR approved for §60.4415(a).

(169) ASTM D5403-93, Standard Test Methods for Volatile Content of Radiation Curable Materials, IBR approved for appendix A-7 to part 60: Method 24, Section 6.6.

(170) ASTM D5453-00, Standard Test Method for Determination of Total Sulfur in Light Hydrocarbons, Motor Fuels and Oils by Ultraviolet Fluorescence, IBR approved for §60.335(b).

(171) ASTM D5453-05, Standard Test Method for Determination of Total Sulfur in Light Hydrocarbons, Motor Fuels and Oils by Ultraviolet Fluorescence, IBR approved for §60.4415(a).

(172) ASTM D5504-01, Standard Test Method for Determination of Sulfur Compounds in Natural Gas and Gaseous Fuels by Gas Chromatography and Chemiluminescence, IBR approved for §§60.334(h) and 60.4360.

(173) ASTM D5504-08, Standard Test Method for Determination of Sulfur Compounds in Natural Gas and Gaseous Fuels by Gas Chromatography and Chemiluminescence, (Approved June 15, 2008), IBR approved for §§60.107a(e) and 60.5413(d).

(174) ASTM D5762-02, Standard Test Method for Nitrogen in Petroleum and Petroleum Products by Boat-Inlet Chemiluminescence, IBR approved for §60.335(b).

(175) ASTM D5865-98, Standard Test Method for Gross Calorific Value of Coal and Coke, IBR approved for §§60.45(f) and 60.46(c), and appendix A-7 to part 60: Method 19, Section 12.5.2.1.3.

(176) ASTM D5865-10, Standard Test Method for Gross Calorific Value of Coal and Coke, (Approved January 1, 2010), IBR approved for §§60.45(f), 60.46(c), and appendix A-7 to part 60: Method 19, section 12.5.2.1.3.

(177) ASTM D6216-98, Standard Practice for Opacity Monitor Manufacturers to Certify Conformance with Design and Performance Specifications, IBR approved for appendix B to part 60: Performance Specification 1.

(178) ASTM D6228-98, Standard Test Method for Determination of Sulfur Compounds in Natural Gas and Gaseous Fuels by Gas Chromatography and Flame Photometric Detection, IBR approved for §60.334(h).

(179) ASTM D6228-98 (Reapproved 2003), Standard Test Method for Determination of Sulfur Compounds in Natural Gas and Gaseous Fuels by Gas Chromatography and Flame Photometric Detection, IBR approved for §§60.4360 and 60.4415.

(180) ASTM D6348-03, Standard Test Method for Determination of Gaseous Compounds by Extractive Direct Interface Fourier Transform Infrared (FTIR) Spectroscopy, (Approved October 1, 2003), IBR approved for §60.73a(b), table 7 to subpart IIII, table 2 to subpart JJJJ, and §60.4245(d).

(181) ASTM D6366-99, Standard Test Method for Total Trace Nitrogen and Its Derivatives in Liquid Aromatic Hydrocarbons by Oxidative Combustion and Electrochemical Detection, IBR approved for §60.335(b)(9).

(182) ASTM D6420-99 (Reapproved 2004), Standard Test Method for Determination of Gaseous Organic Compounds by Direct Interface Gas Chromatography-Mass Spectrometry, (Approved October 1, 2004), IBR approved for §60.107a(d) and table 2 to subpart JJJJ.

(183) ASTM D6522-00, Standard Test Method for Determination of Nitrogen Oxides, Carbon Monoxide, and Oxygen Concentrations in Emissions from Natural Gas-Fired Reciprocating Engines, Combustion Turbines, Boilers, and Process Heaters Using Portable Analyzers, IBR approved for §60.335(a).

(184) ASTM D6522-00 (Reapproved 2005), Standard Test Method for Determination of Nitrogen Oxides, Carbon Monoxide, and Oxygen Concentrations in Emissions from Natural Gas-Fired Reciprocating Engines, Combustion Turbines, Boilers, and Process Heaters Using Portable Analyzers, (Approved October 1, 2005), IBR approved for table 2 to subpart JJJJ, §§60.5413(b) and (d), and 60.5413a(b).

(185) ASTM D6522-11 Standard Test Method for Determination of Nitrogen Oxides, Carbon Monoxide, and Oxygen Concentrations in Emissions from Natural Gas-Fired Reciprocating Engines, Combustion Turbines, Boilers, and Process Heaters Using Portable Analyzers (Approved December 1, 2011), IBR approved for §60.37f(a), 60.766(a).

(186) ASTM D6667-01, Standard Test Method for Determination of Total Volatile Sulfur in Gaseous Hydrocarbons and Liquefied Petroleum Gases by Ultraviolet Fluorescence, IBR approved for §60.335(b).

(187) ASTM D6667-04, Standard Test Method for Determination of Total Volatile Sulfur in Gaseous Hydrocarbons and Liquefied Petroleum Gases by Ultraviolet Fluorescence, IBR approved for §60.4415(a).

(188) ASTM D6751-11b, Standard Specification for Biodiesel Fuel Blend Stock (B100) for Middle Distillate Fuels, including Appendices X1 through X3, (Approved July 15, 2011), IBR approved for §§60.41b, 60.41c, and 60.5580.

(189) ASTM D6784-02, Standard Test Method for Elemental, Oxidized, Particle-Bound and Total Mercury in Flue Gas Generated from Coal-Fired Stationary Sources (Ontario Hydro Method), IBR approved for §60.56c(b) and appendix B to part 60: Performance Specification 12A, Section 8.6.2.

(190) ASTM D6784-02 (Reapproved 2008) Standard Test Method for Elemental, Oxidized, Particle-Bound and Total Mercury in Flue Gas Generated from Coal-Fired Stationary Sources (Ontario Hydro Method), (Approved April 1, 2008), IBR approved for §§60.2165(j) and 60.2730(j), tables 1, 5, 6 and 8 to subpart CCCC, and tables 2, 6, 7, and 9 to subpart DDDD, §§60.4900(b), 60.5220(b), tables 1 and 2 to subpart LLLL, and tables 2 and 3 to subpart MMMM.

(191) ASTM D6911-15, Standard Guide for Packaging and Shipping Environmental Samples for Laboratory Analysis, approved January 15, 2015, IBR approved for appendix A-8: Method 30B.

(192) ASTM D7467-10, Standard Specification for Diesel Fuel Oil, Biodiesel Blend (B6 to B20), including Appendices X1 through X3, (Approved August 1, 2010), IBR approved for §§60.41b, 60.41c, and 60.5580.

(193) ASTM E168-67, General Techniques of Infrared Quantitative Analysis, IBR approved for §§60.485a(d), 60.593(b), 60.593a(b), and 60.632(f).

(194) ASTM E168-77, General Techniques of Infrared Quantitative Analysis, IBR approved for §§60.485a(d), 60.593(b), 60.593a(b), and 60.632(f).

(195) ASTM E168-92, General Techniques of Infrared Quantitative Analysis, IBR approved for §§60.485a(d), 60.593(b), 60.593a(b), 60.632(f), 60.5400, 60.5400a(f).

(196) ASTM E169-63, General Techniques of Ultraviolet Quantitative Analysis, IBR approved for §§60.485a(d), 60.593(b), 60.593a(b), and 60.632(f) .

(197) ASTM E169-77, General Techniques of Ultraviolet Quantitative Analysis, IBR approved for §§60.485a(d), 60.593(b), and 60.593a(b), 60.632(f).

(198) ASTM E169-93, General Techniques of Ultraviolet Quantitative Analysis, (Approved May 15, 1993), IBR approved for §§60.485a(d), 60.593(b), 60.593a(b), 60.632(f), 60.5400(f), and 60.5400a(f).

(199) ASTM E260-73, General Gas Chromatography Procedures, IBR approved for §§60.485a(d), 60.593(b), 60.593a(b), and 60.632(f).

(200) ASTM E260-91, General Gas Chromatography Procedures, (IBR approved for §§60.485a(d), 60.593(b), 60.593a(b), and 60.632(f).

(201) ASTM E260-96, General Gas Chromatography Procedures, (Approved April 10, 1996), IBR approved for §§60.485a(d), 60.593(b), 60.593a(b), 60.632(f), 60.5400(f), 60.5400a(f) 60.5406(b), and 60.5406a(b)(3).

(202) ASTM E617-13, Standard Specification for Laboratory Weights and Precision Mass Standards, approved May 1, 2013, IBR approved for appendix A-3: Methods 4, 5, 5H, 5I, and appendix A-8: Method 29.

(203) ASTM E871-82 (Reapproved 2013), Standard Test Method for Moisture Analysis of Particulate Wood Fuels, (Approved August 15, 2013), IBR approved for appendix A-8: method 28R.

(204) ASTM E1584-11, Standard Test Method for Assay of Nitric Acid, (Approved August 1, 2011), IBR approved for §60.73a(c).

(205) ASTM E2515-11, Standard Test Method for Determination of Particulate Matter Emissions Collected by a Dilution Tunnel, (Approved November 1, 2011), IBR approved for §60.534 and §60.5476.

(206) ASTM E2618-13 Standard Test Method for Measurement of Particulate Matter Emissions and Heating Efficiency of Outdoor Solid Fuel-Fired Hydronic Heating Appliances, (Approved September 1, 2013), IBR approved for §60.5476.

(207) ASTM E2779-10, Standard Test Method for Determining Particulate Matter Emissions from Pellet Heaters, (Approved October 1, 2010), IBR approved for §60.534.

(208) ASTM E2780-10, Standard Test Method for Determining Particulate Matter Emissions from Wood Heaters, (Approved October 1, 2010), IBR approved for appendix A: method 28R.

(209) ASTM UOP539-97, Refinery Gas Analysis by Gas Chromatography, (Copyright 1997), IBR approved for §60.107a(d).

§60.18 General control device and work practice requirements.

(a) Introduction.

(1) This section contains requirements for control devices used to comply with applicable subparts of 40 CFR parts 60 and 61. The requirements are placed here for administrative convenience and apply only to facilities covered by subparts referring to this section.

(2) This section also contains requirements for an alternative work practice used to identify leaking equipment. This alternative work practice is placed here for administrative convenience and is available to all subparts in 40 CFR parts 60, 61, 63, and 65 that require monitoring of equipment with a 40 CFR part 60, appendix A-7, Method 21 monitor.

(b) *Flares.* Paragraphs (c) through (f) apply to flares.

(c)(1) Flares shall be designed for and operated with no visible emissions as determined by the methods specified in paragraph (f), except for periods not to exceed a total of 5 minutes during any 2 consecutive hours.

(2) Flares shall be operated with a flame present at all times, as determined by the methods specified in paragraph (f).

(3) An owner/operator has the choice of adhering to either the heat content specifications in paragraph (c)(3)(ii) of this section and the maximum tip velocity specifications in paragraph (c)(4) of this section, or adhering to the requirements in paragraph (c)(3)(i) of this section.

(i)(A) Flares shall be used that have a diameter of 3 inches or greater, are nonassisted, have a hydrogen content of 8.0 percent (by volume), or greater, and are designed for and operated with an exit velocity less than 37.2 m/sec (122 ft/sec) and less than the velocity, V_{max}, as determined by the following equation:

$$V_{max} = (X_{H2} - K_1) * K_2$$

Where:

V_{max} = Maximum permitted velocity, m/sec.

K_1 = Constant, 6.0 volume-percent hydrogen.

K_2 = Constant, 3.9(m/sec)/volume-percent hydrogen.

X_{H2} = The volume-percent of hydrogen, on a wet basis, as calculated by using the American Society for Testing and Materials (ASTM) Method D1946-77. (Incorporated by reference as specified in §60.17).

(B) The actual exit velocity of a flare shall be determined by the method specified in paragraph (f)(4) of this section.

(ii) Flares shall be used only with the net heating value of the gas being combusted being 11.2 MJ/scm (300 Btu/scf) or greater if the flare is steam-assisted or air-assisted; or with the net heating value of the gas being combusted being 7.45 MJ/scm (200 Btu/scf) or greater if the flare is nonassisted. The net heating value of the gas being combusted shall be determined by the methods specified in paragraph (f)(3) of this section.

(4)(i) Steam-assisted and nonassisted flares shall be designed for and operated with an exit velocity, as determined by the methods specified in paragraph (f)(4) of this section, less than 18.3 m/sec (60 ft/sec), except as provided in paragraphs (c)(4) (ii) and (iii) of this section.

(ii) Steam-assisted and nonassisted flares designed for and operated with an exit velocity, as determined by the methods specified in paragraph (f)(4), equal to or greater than 18.3 m/sec (60 ft/sec) but less than 122 m/sec (400 ft/sec) are allowed if the net heating value of the gas being combusted is greater than 37.3 MJ/scm (1,000 Btu/scf).

(iii) Steam-assisted and nonassisted flares designed for and operated with an exit velocity, as determined by the methods specified in paragraph (f)(4), less than the velocity, V_{max}, as determined by the method specified in paragraph (f)(5), and less than 122 m/sec (400 ft/sec) are allowed.

(5) Air-assisted flares shall be designed and operated with an exit velocity less than the velocity, V_{max}, as determined by the method specified in paragraph (f)(6).

(6) Flares used to comply with this section shall be steam-assisted, air-assisted, or nonassisted.

(d) Owners or operators of flares used to comply with the provisions of this subpart shall monitor these control devices to ensure that they are operated and maintained in conformance with their designs. Applicable subparts will provide provisions stating how owners or operators of flares shall monitor these control devices.

(e) Flares used to comply with provisions of this subpart shall be operated at all times when emissions may be vented to them.

(f)(1) Method 22 of appendix A to this part shall be used to determine the compliance of flares with the visible emission provisions of this subpart. The observation period is 2 hours and shall be used according to Method 22.

(2) The presence of a flare pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a flame.

(3) The net heating value of the gas being combusted in a flare shall be calculated using the following equation:

$$H_T = K \sum_{i=1}^{n} C_i H_i$$

where:

H_T = Net heating value of the sample, MJ/scm; where the net enthalpy per mole of offgas is based on combustion at 25 °C and 760 mm Hg, but the standard temperature for determining the volume corresponding to one mole is 20 °C;

$$K = \text{Constant}, 1.740 \times 10^{-7} \left(\frac{1}{ppm}\right) \left(\frac{g\ mole}{scm}\right) \left(\frac{MJ}{kcal}\right)$$

where the standard temperature for $\left(\frac{g\ mole}{scm}\right)$ is 20°C;

C_i = Concentration of sample component i in ppm on a wet basis, as measured for organics by Reference Method 18 and measured for hydrogen and carbon monoxide by ASTM D1946-77 or 90 (Reapproved 1994) (Incorporated by reference as specified in §60.17); and

H_i = Net heat of combustion of sample component i, kcal/g mole at 25 °C and 760 mm Hg. The heats of combustion may be determined using ASTM D2382-76 or 88 or D4809-95 (incorporated by reference as specified in §60.17) if published values are not available or cannot be calculated.

(4) The actual exit velocity of a flare shall be determined by dividing the volumetric flowrate (in units of standard temperature and pressure), as determined by Reference Methods 2, 2A, 2C, or 2D as appropriate; by the unobstructed (free) cross sectional area of the flare tip.

(5) The maximum permitted velocity, V_{max}, for flares complying with paragraph (c)(4)(iii) shall be determined by the following equation.

$$\text{Log}_{10}(V_{max}) = (H_T + 28.8)/31.7$$

V_{max} = Maximum permitted velocity, M/sec

28.8 = Constant

31.7 = Constant

H_T = The net heating value as determined in paragraph (f)(3).

(6) The maximum permitted velocity, V_{max}, for air-assisted flares shall be determined by the following equation.

$$V_{max} = 8.706 + 0.7084\,(H_T)$$

V_{max} = Maximum permitted velocity, m/sec

8.706 = Constant

0.7084 = Constant

H_T = The net heating value as determined in paragraph (f)(3).

(g) *Alternative work practice for monitoring equipment for leaks.* Paragraphs (g), (h), and (i) of this section apply to all equipment for which the applicable subpart requires monitoring with a 40 CFR part 60, appendix A-7, Method 21 monitor, except for closed vent systems, equipment designated as leakless, and equipment identified in the applicable subpart as having no detectable emissions, as indicated by an instrument reading of less than 500 ppm above background. An owner or operator may use an optical gas imaging instrument instead of a 40 CFR part 60, appendix A-7, Method 21 monitor. Requirements in the existing subparts that are specific to the Method 21 instrument do not apply under this section. All other requirements in the applicable subpart that are not addressed in paragraphs (g), (h), and (i) of this section apply to this standard. For example, equipment specification requirements, and non-Method 21 instrument recordkeeping and reporting requirements in the applicable subpart continue to apply. The terms defined in paragraphs (g)(1) through (5) of this section have meanings that are specific to the alternative work practice standard in paragraphs (g), (h), and (i) of this section.

(1) *Applicable subpart* means the subpart in 40 CFR parts 60, 61, 63, or 65 that requires monitoring of equipment with a 40 CFR part 60, appendix A-7, Method 21 monitor.

(2) *Equipment* means pumps, valves, pressure relief valves, compressors, open-ended lines, flanges, connectors, and other equipment covered by the applicable subpart that require monitoring with a 40 CFR part 60, appendix A-7, Method 21 monitor.

(3) *Imaging* means making visible emissions that may otherwise be invisible to the naked eye.

(4) *Optical gas imaging instrument* means an instrument that makes visible emissions that may otherwise be invisible to the naked eye.

(5) *Repair* means that equipment is adjusted, or otherwise altered, in order to eliminate a leak.

(6) *Leak* means:

(i) Any emissions imaged by the optical gas instrument;

(ii) Indications of liquids dripping;

(iii) Indications by a sensor that a seal or barrier fluid system has failed; or

(iv) Screening results using a 40 CFR part 60, appendix A-7, Method 21 monitor that exceed the leak definition in the applicable subpart to which the equipment is subject.

(h) The alternative work practice standard for monitoring equipment for leaks is available to all subparts in 40 CFR parts 60, 61, 63, and 65 that require monitoring of equipment with a 40 CFR part 60, appendix A-7, Method 21 monitor.

(1) An owner or operator of an affected source subject to CFR parts 60, 61, 63, or 65 can choose to comply with the alternative work practice requirements in paragraph (i) of this section instead of using the 40 CFR part 60, appendix A-7, Method 21 monitor to identify leaking equipment. The owner or operator must document the equipment, process units, and facilities for which the alternative work practice will be used to identify leaks.

(2) Any leak detected when following the leak survey procedure in paragraph (i)(3) of this section must be identified for repair as required in the applicable subpart.

(3) If the alternative work practice is used to identify leaks, re-screening after an attempted repair of leaking equipment must be conducted using either the alternative work practice or the 40 CFR part 60, appendix A-7, Method 21 monitor at the leak definition required in the applicable subpart to which the equipment is subject.

(4) The schedule for repair is as required in the applicable subpart.

(5) When this alternative work practice is used for detecting leaking equipment, choose one of the monitoring frequencies listed in Table 1 to subpart A of this part in lieu of the monitoring frequency specified for regulated equipment in the applicable subpart. Reduced monitoring frequencies for good performance are not applicable when using the alternative work practice.

(6) When this alternative work practice is used for detecting leaking equipment the following are not applicable for the equipment being monitored:

(i) Skip period leak detection and repair;

(ii) Quality improvement plans; or

(iii) Complying with standards for allowable percentage of valves and pumps to leak.

(7) When the alternative work practice is used to detect leaking equipment, the regulated equipment in paragraph (h)(1)(i) of this section must also be monitored annually using a 40 CFR part 60, appendix A-7, Method 21 monitor at the leak definition required in the applicable subpart. The owner or operator may choose the specific monitoring period (for example, first quarter) to conduct the annual monitoring. Subsequent monitoring must be conducted every 12 months from the initial period. Owners or operators must keep records of the annual Method 21 screening results, as specified in paragraph (i)(4)(vii) of this section.

(i) An owner or operator of an affected source who chooses to use the alternative work practice must comply with the requirements of paragraphs (i)(1) through (i)(5) of this section.

(1) Instrument Specifications. The optical gas imaging instrument must comply with the requirements in (i)(1)(i) and (i)(1)(ii) of this section.

(i) Provide the operator with an image of the potential leak points for each piece of equipment at both the detection sensitivity level and within the distance used in the daily instrument check described in paragraph (i)(2) of this section. The detection sensitivity level depends upon the frequency at which leak monitoring is to be performed.

(ii) Provide a date and time stamp for video records of every monitoring event.

(2) Daily Instrument Check. On a daily basis, and prior to beginning any leak monitoring work, test the optical gas imaging instrument at the mass flow rate determined in paragraph (i)(2)(i) of this section in accordance with the procedure specified in paragraphs (i)(2)(ii) through (i)(2)(iv) of this section for each camera configuration used during monitoring (for example, different lenses used), unless an alternative method to demonstrate daily instrument checks has been approved in accordance with paragraph (i)(2)(v) of this section.

(i) Calculate the mass flow rate to be used in the daily instrument check by following the procedures in paragraphs (i)(2)(i)(A) and (i)(2)(i)(B) of this section.

(A) For a specified population of equipment to be imaged by the instrument, determine the piece of equipment in contact with the lowest mass fraction of chemicals that are detectable, within the distance to be used in paragraph (i)(2)(iv)(B) of this section, at or below the standard detection sensitivity level.

(B) Multiply the standard detection sensitivity level, corresponding to the selected monitoring frequency in Table 1 of subpart A of this part, by the mass fraction of detectable chemicals from the stream identified in paragraph (i)(2)(i)(A) of this section to determine the mass flow rate to be used in the daily instrument check, using the following equation.

$$E_{dic} = (E_{sds}) \sum_{i=1}^{k} x_i$$

Where:

E_{dic} = Mass flow rate for the daily instrument check, grams per hour

x_i = Mass fraction of detectable chemical(s) i seen by the optical gas imaging instrument, within the distance to be used in paragraph (i)(2)(iv)(B) of this section, at or below the standard detection sensitivity level, E_{sds}.

E_{sds} = Standard detection sensitivity level from Table 1 to subpart A, grams per hour

k = Total number of detectable chemicals emitted from the leaking equipment and seen by the optical gas imaging instrument.

(ii) Start the optical gas imaging instrument according to the manufacturer's instructions, ensuring that all appropriate settings conform to the manufacturer's instructions.

(iii) Use any gas chosen by the user that can be viewed by the optical gas imaging instrument and that has a purity of no less than 98 percent.

(iv) Establish a mass flow rate by using the following procedures:

(A) Provide a source of gas where it will be in the field of view of the optical gas imaging instrument.

(B) Set up the optical gas imaging instrument at a recorded distance from the outlet or leak orifice of the flow meter that will not be exceeded in the actual performance of the leak survey. Do not exceed the operating parameters of the flow meter.

(C) Open the valve on the flow meter to set a flow rate that will create a mass emission rate equal to the mass rate specified in paragraph (i)(2)(i) of this section while observing the gas flow through the optical gas imaging instrument viewfinder. When an image of the gas emission is seen through the viewfinder at the required emission rate, make a record of the reading on the flow meter.

(v) Repeat the procedures specified in paragraphs (i)(2)(ii) through (i)(2)(iv) of this section for each configuration of the optical gas imaging instrument used during the leak survey.

(vi) To use an alternative method to demonstrate daily instrument checks, apply to the Administrator for approval of the alternative under §60.13(i).

(3) Leak Survey Procedure. Operate the optical gas imaging instrument to image every regulated piece of equipment selected for this work practice in accordance with the instrument manufacturer's operating

parameters. All emissions imaged by the optical gas imaging instrument are considered to be leaks and are subject to repair. All emissions visible to the naked eye are also considered to be leaks and are subject to repair.

(4) Recordkeeping. You must keep the records described in paragraphs (i)(4)(i) through (i)(4)(vii) of this section:

(i) The equipment, processes, and facilities for which the owner or operator chooses to use the alternative work practice.

(ii) The detection sensitivity level selected from Table 1 to subpart A of this part for the optical gas imaging instrument.

(iii) The analysis to determine the piece of equipment in contact with the lowest mass fraction of chemicals that are detectable, as specified in paragraph (i)(2)(i)(A) of this section.

(iv) The technical basis for the mass fraction of detectable chemicals used in the equation in paragraph (i)(2)(i)(B) of this section.

(v) The daily instrument check. Record the distance, per paragraph (i)(2)(iv)(B) of this section, and the flow meter reading, per paragraph (i)(2)(iv)(C) of this section, at which the leak was imaged. Keep a video record of the daily instrument check for each configuration of the optical gas imaging instrument used during the leak survey (for example, the daily instrument check must be conducted for each lens used). The video record must include a time and date stamp for each daily instrument check. The video record must be kept for 5 years.

(vi) Recordkeeping requirements in the applicable subpart. A video record must be used to document the leak survey results. The video record must include a time and date stamp for each monitoring event. A video record can be used to meet the recordkeeping requirements of the applicable subparts if each piece of regulated equipment selected for this work practice can be identified in the video record. The video record must be kept for 5 years.

(vii) The results of the annual Method 21 screening required in paragraph (h)(7) of this section. Records must be kept for all regulated equipment specified in paragraph (h)(1) of this section. Records must identify the equipment screened, the screening value measured by Method 21, the time and date of the screening, and calibration information required in the existing applicable subpart.

(5) Reporting. Submit the reports required in the applicable subpart. Submit the records of the annual Method 21 screening required in paragraph (h)(7) of this section to the Administrator via e-mail to *CCG-AWP@EPA.GOV.*

§60.19 General notification and reporting requirements.

(a) For the purposes of this part, time periods specified in days shall be measured in calendar days, even if the word "calendar" is absent, unless otherwise specified in an applicable requirement.

(b) For the purposes of this part, if an explicit postmark deadline is not specified in an applicable requirement for the submittal of a notification, application, report, or other written communication to the Administrator, the owner or operator shall postmark the submittal on or before the number of days specified in the applicable requirement. For example, if a notification must be submitted 15 days before a particular event is scheduled to take place, the notification shall be postmarked on or before 15 days preceding the event; likewise, if a notification must be submitted 15 days after a particular event takes place, the notification shall be delivered or postmarked on or before 15 days following the end of the event. The use of reliable non-Government mail carriers that provide indications of verifiable delivery of information required to be submitted to the Administrator, similar to the postmark provided by the U.S. Postal Service, or alternative means of delivery, including the use of electronic media, agreed to by the permitting authority, is acceptable.

(c) Notwithstanding time periods or postmark deadlines specified in this part for the submittal of information to the Administrator by an owner or operator, or the review of such information by the Administrator, such time periods or deadlines may be changed by mutual agreement between the owner or operator and the Administrator. Procedures governing the implementation of this provision are specified in paragraph (f) of this section.

(d) If an owner or operator of an affected facility in a State with delegated authority is required to submit periodic reports under this part to the State, and if the State has an established timeline for the submission of periodic reports that is consistent with the reporting frequency(ies) specified for such facility under this part, the owner or operator may change the dates by which periodic reports under this part shall be submitted (without changing the frequency of reporting) to be consistent with the State's schedule by mutual agreement between the owner or operator and the State. The allowance in the previous sentence applies in each State beginning 1 year after the affected facility is required to be in compliance with the applicable subpart in this part. Procedures governing the implementation of this provision are specified in paragraph (f) of this section.

(e) If an owner or operator supervises one or more stationary sources affected by standards set under this part and standards set under part 61, part 63, or both such parts of this chapter, he/she may arrange by mutual agreement between the owner or operator and the Administrator (or the State with an approved permit program) a common schedule on which periodic reports required by each applicable standard shall be submitted throughout the year. The allowance in the previous sentence applies in each State beginning 1 year after the stationary source is required to be in compliance with the applicable subpart in this part, or 1 year after the stationary source is required to be in compliance with the applicable 40 CFR part 61 or part 63 of this chapter standard, whichever is latest. Procedures governing the implementation of this provision are specified in paragraph (f) of this section.

(f)(1)(i) Until an adjustment of a time period or postmark deadline has been approved by the Administrator under paragraphs (f)(2) and (f)(3) of this section, the owner or operator of an affected facility remains strictly subject to the requirements of this part.

(ii) An owner or operator shall request the adjustment provided for in paragraphs (f)(2) and (f)(3) of this section each time he or she wishes to change an applicable time period or postmark deadline specified in this part.

(2) Notwithstanding time periods or postmark deadlines specified in this part for the submittal of information to the Administrator by an owner or operator, or the review of such information by the Administrator, such time periods or deadlines may be changed by mutual agreement between the owner or operator and the Administrator. An owner or operator who wishes to request a change in a time period or postmark deadline for a particular requirement shall request the adjustment in writing as soon as practicable before the subject activity is required to take place. The owner or operator shall include in the request whatever information he or she considers useful to convince the Administrator that an adjustment is warranted.

(3) If, in the Administrator's judgment, an owner or operator's request for an adjustment to a particular time period or postmark deadline is warranted, the Administrator will approve the adjustment. The Administrator will notify the owner or operator in writing of approval or disapproval of the request for an adjustment within 15 calendar days of receiving sufficient information to evaluate the request.

(4) If the Administrator is unable to meet a specified deadline, he or she will notify the owner or operator of any significant delay and inform the owner or operator of the amended schedule.

Table 1 to Subpart A of Part 60—Detection Sensitivity Levels (grams per hour)

Monitoring frequency per subpart[a]	Detection sensitivity level
Bi-Monthly	60

Semi-Quarterly	85
Monthly	100

[a]When this alternative work practice is used to identify leaking equipment, the owner or operator must choose one of the monitoring frequencies listed in this table in lieu of the monitoring frequency specified in the applicable subpart. Bi-monthly means every other month. Semi-quarterly means twice per quarter. Monthly means once per month.

Exhibit 4

Technical Support Document
For
Draft Air Emission Permit No. 12300341-101

This technical support document (TSD) is intended for all parties interested in the draft permit and to meet the requirements that have been set forth by the federal and state regulations (40 CFR § 70.7(a)(5) and Minn. R. 7007.0850, subp. 1). The purpose of this document is to provide the legal and factual justification for each applicable requirement or policy decision considered in the preliminary determination to issue the draft permit.

1. General information

1.1 Applicant and stationary source location:

Table 1. Applicant and source address

Contact: Bradley Hartsell Phone: 651-209-9466	

1.2 Facility description

The facility manufactures lead (Pb) metal products fabricated using refined material purchased from recycling facilities. The facility produces battery terminal posts for automotive, marine and other consumer, commercial, governmental, and military vehicles and equipment. Other fabricated products include lead and tin sinker weights for recreational fishing applications, and lead components for governmental, commercial, recreational and personal ammunition. Following fabrication, some battery terminal posts are treated with a coating to protect the products from corrosion or to improve fit with other components. The air emission units at the facility include battery terminal post coating units (coaters), die casting units, lead and tin melt pots, coining units, abrasive blasting units, makeup air units, space heaters, an emergency generator, and a solvent-vapor extraction unit. The major pollutants of concern include volatile organic compounds (VOC), trans-1,2-dichloroethylene (t-DCE), lead, particulate matter (PM), particulate matter with aerodynamic diameter less than 10 micrometers (PM_{10}), particulate matter with aerodynamic diameter less than 2.5 micrometers ($PM_{2.5}$), and nitrogen oxides (NO_x). Other pollutants emitted from facility processes include sulfur dioxide (SO_2), carbon monoxide (CO), and hazardous air pollutants (HAPs) associated with fossil fuel combustion from the compression ignition emergency generator, makeup air units, lead and tin melt pots, space heaters, and soil vapor extraction, which emits small amounts of trichloroethylene (TCE).

Commented [A1]: TCE has been non-detect. Carbon controls are in place. It is not correct to presume TCE via soil vapor when none has been detected.

Pollution control equipment operated at the facility includes eighteen Nederman mist eliminators/HEPA filters and low-efficiency electrostatic precipitators (Smog Hogs), connected in-series, which capture lead and PM/PM_{10}/$PM_{2.5}$emissions from lead processing units. HEPA filters are used to control PM/PM_{10}/$PM_{2.5}$ emissions from select spray coating and abrasive blasting units. The facility also operates a sub-slab depressurization system (SSDS) and soil vapor extraction (SVE) system with two granular activated carbon (GAC) canisters to collect and control VOC and HAP emissions from beneath the facility's concrete floor.

1.3 Description of the activities allowed by this permit action

This permit action is for a Major Amendment due to (1) the establishment and change to federally enforceable emission caps to avoid major source status, (2) significant amendments to existing monitoring, reporting and record keeping requirements in the permit, and (3) establishment of permit conditions based on a case-by-case determination of emission limitation based on source-specific ambient impact analysis for criteria pollutants and air toxics. The MPCA has a combined operating and construction permitting program under Minn. R. ch. 7007. Under that authority, this permit action authorizes construction. The following changes and modifications are authorized by this permit action.

Acknowledgement of the Stipulation Agreement (Agreement) and Administrative Order (Order). The permit acknowledges the Agreement and the Order as a clarification to document that these enforcement actions are in effect at the time of permit issuance and are not terminated with the issuance of the permit. The permit includes specific provisions from the Agreement, executed March 1, 2019, and Administrative Order, signed January 17, 2020, which are to be continued into the permit term. These provisions are compliance demonstration requirements that were deemed technically appropriate and necessary to ensure continued compliance with the permit limitations as required under Minn. R. 7007.0800. These conditions will remain as part of the permit independently of the status of the Agreement and the Order.

Addition of emission units previously identified as insignificant activities. Several emission units at the facility were previously identified as insignificant activities under Minn. R. 7007.1300, subp. 3(F) (formerly Minn. R. 7007.1300, subp 3(I)), including die casting units, natural gas-fired heating equipment, distillation equipment, and cooling towers. As a result of Title V modeling, the facility accepted emission limits to demonstrate compliance with applicable National Ambient Air Quality Standards (NAAQS). Since these units were modeled explicitly, they have been added to the subject item inventory as emission units, and therefore are not considered insignificant activities. Additionally, some lead processing units with control equipment previously designated as insignificant activities based on their controlled emissions that were not subject to enforceable permit conditions in the previous permit, and therefore, are not insignificant activities under Minnesota Rules.

Addition of limits on t-DCE, PM_{10}, $PM_{2.5}$, NO_2, and lead emissions. The technical review of the permit application required an air emissions risk analysis (AERA) and dispersion model to determine the health risks of t-DCE and lead emissions from the facility. The TCE ban, authorized under Minn. Stat. 116.385, requires that facilities replacing TCE with other chemicals, such as Water Gremlin, must demonstrate that the new chemical is less toxic to human health. This AERA satisfies the requirement legislated in Minn. Stat. 116.385, subd. 3, obligating the MPCA to ensure that solvents selected to replace TCE at facilities remain protective of human health and the environment. Through the permitting process, the facility was required to conduct Title V modeling to determine modeled compliance with applicable PM_{10}, $PM_{2.5}$, NO_2, and lead NAAQS. The results of these analyses required emissions and operation limits such that the facility remains in compliance with all applicable PM_{10}, $PM_{2.5}$, NO_2, and lead NAAQS and below the heath benchmarks for t-DCE and lead.

Addition of continuous emissions monitoring system (CEMS) in the battery terminal post coater stack. The permit includes a VOC CEMS in the battery terminal post coater stack (STRU 73). This was initially required by the Agreement to monitor the occurrence of emissions from the coaters and quantify the amount of t-DCE (a type of VOC) leaving the coaters to verify compliance with solvent use limits required by the Agreement. Permanent operation and maintenance of a VOC CEMS, recordkeeping of CEM results and CEM correlation validation is required by the permit as a supplement to the main compliance demonstration method of recordkeeping of daily material usage. Other supplemental requirements include quarterly VOC solvent inventory audits, and audit reporting.

Addition of solvent vapor remediation system. The permit includes the addition of the sub-slab depressurization and solvent vapor extraction system with associated GAC canister control equipment to

capture existing (and future) sub-slab solvent vapor contamination identified during the remedial investigation. The permit includes limits on emissions of target chlorinated compounds, operation, monitoring, recordkeeping, and reporting requirements. The permit includes provisions specifying the conditions under which operation of the solvent vapor remediation system and associated control equipment may be discontinued as approved by the MPCA Remediation Division.

Addition of ambient monitors for VOCs. Operation of approved ambient air VOC monitors required by the Agreement are to be operated for at least two years following permit issuance to ensure t-DCE emissions remain below health risk benchmarks at all times. The initial monitoring plan is what the Agreement requires, and the Permittee is required to revise the monitoring plan in accordance with parameters defined in the permit. After the revised ambient monitoring plan is approved, the Permittee may change the location of the monitors, the frequency of sampling and the analytical reporting requirements. Conditions that must be met to discontinue VOC monitoring are also specified. The facility is responsible for managing each monitor's operation, maintenance, recordkeeping, and reporting of results as described later in this permit.

Recurring testing to verify coating rooms are operating as total enclosures. In order to ensure all VOC solvent vapors from coating operations are being vented to the common stack (STRU 73), the permit requires that a minimum negative pressure differential be maintained, including continuous monitoring of coating room pressure and alarms (audible and visual) that alert when coating room pressure is above the set point established by the accepted standard practice under the permit. The permit also requires daily inspection of enclosure integrity, annual testing of the enclosure to ensure it meets the definition described above following U.S. Environmental Protection Agency (EPA) Method 204 in Appendix M of 40 CFR Part 51, and maintenance of coating room floor sealant to avoid further sub-slab contamination due to vapor intrusion or spills.

Solvent authorized for use in coating operations. Permit No. 12300341-003 authorized the use of trichloroethylene (TCE), a VOC and HAP, as an allowable solvent in coating operations. Water Gremlin has eliminated the use of TCE at the facility and is using t-DCE as the TCE replacement. Permit No. 12300341-101 prohibits the use of TCE in any facility operations, and changes the allowable VOC-based coating solvent formula to less than or equal to 90 percent by weight VOC. This permit specifically authorizes VOC coatings containing t-DCE. All of the VOC in t¬-DCE coatings is conservatively assumed to be t-DCE, and the balance of the material is comprised of greater than or equal to 10 percent by weight of non-HAP, non-VOC (inert) constituents. Changes to any solvent formulation that increases the amount of regulated pollutants, or air toxics for which there are health benchmarks or adds new pollutants, may require a major amendment described under Minn. R. 7007.1500.

Incorporation of minor amendment authorizing operation of EQUI 82, EQUI 219, and EQUI 220, and authorization to install additional UV coaters. Air Quality Permit No. 12300341-004 authorized construction and operation of a battery terminal post coater (EQUI 82) utilizing a non-t-DCE, very low VOC, UV-cured coating technology. The minor amendment has been incorporated into this permit, including the emission limits for PM_{10} and $PM_{2.5}$at STRU 73 established by the refined dispersion model. In spite of the effective increase in allowable emissions from EQUI 82 compared to what was authorized by the minor amendment, the refined model demonstrates compliance with applicable PM_{10} and $PM_{2.5}$ NAAQS for the total facility. The refined model includes revised emission limits for EQUI 82 as well as allowable emissions for future UV coaters.

Authorization to convert t-DCE VOC coaters to UV or water-based coating, and conversion to other application methods. Existing t-DCE VOC coaters were converted to use a water-based coating or UV coating application to further reduce VOC emissions. These were added to the permit and their emissions are regulated for VOC, PM_{10}, and $PM_{2.5}$. The permit allows for the conversion of t-DCE VOC coaters to use water-

based or UV coating, and conversion of water-based coaters to UV coaters, or vice versa. The permit allows conversion of dip/drip water-based coaters to water-based spray application methods, and vice versa. The permit prohibits the conversion of water-based or UV coaters to t-DCE VOC coaters, the addition of more t- DCE VOC coaters, or the increase in capacity of existing t-DCE VOC coaters without a major amendment.

Modification of VOC emissions calculation procedure and addition of t-DCE emissions calculation procedure. Permit No. 12300341-101 authorizes calculation of VOC emissions primarily based on solvent usage records, including an audit approach based on solvent purchase and inventory records, and reconciling results from the CEMS measurements to further validate solvent usage records. Due to past compliance issues with the method in Permit No. 12300341-003, and to increase the accuracy of VOC emissions accounting, Permit No. 12300341-101 requires daily recordkeeping of several parameters related to solvent usage, including VOC solvent usage, VOC solvent recovered from the distiller, water-based coating usage, UV coating usage, VOC waste, and the VOC/t-DCE 365-day rolling sum. MPCA is also requiring VOC solvent purchase inventory records and CEMS measurements at the coating room stack to verify the solvent usage records are reliable. VOC emissions from evaporation loses outside the coating rooms will be included based on measured indoor air concentrations as described in this permit. Emissions of t-DCE will be conservatively assumed to be equal to VOC emissions from the t-DCE VOC coaters.

Dismantlement and removal of Fluidized Bed Solvent Recovery (carbon adsorption) unit. The facility had a carbon adsorption unit, originally installed in 2002, to control and recover TCE emissions from coating operations, which were then reconditioned and reused in the coating process. A larger carbon adsorption unit was installed in December 2018 to solve efficiency issues identified in the Environmental Audit. As a result of enforcement of the Agreement, TCE use was banned from the facility and an attempt was made to retrofit the new carbon adsorption unit to recover t-DCE, which became the replacement solvent. The initial performance test revealed a control efficiency far less than warranted by the manufacturer due to the unit being originally designed for TCE recovery. After numerous attempts to obtain a consistent control efficiency greater than or equal to 70 percent as proposed in the application, the facility abandoned the adsorption unit as a feasible control device in its operations; therefore, the carbon adsorption unit has been removed from the permit. The permit also authorizes the replacement of the stack associated with the removed carbon adsorption unit. The facility will demonstrate compliance with VOC and t-DCE emission limits through recordkeeping of solvent usage and computation of emissions based on records and default measured emissions outside the coating rooms. The emission calculations are defined in the permit. The compliance demonstration for limits t-DCE effectively limits the coating solvent usage.

Removal of VOC and HAP emission limit precap. Permit No. 12300341-003 allowed for installation and operation of additional VOC battery terminal post coaters without prior authorization from the MPCA. This is known as a “Precap” type of permit. Permit conditions pre-authorizing construction and operation of additional t-DCE VOC coaters have been removed and will not be authorized by Permit No. 12300341-101. The replacement of existing VOC coaters with larger capacity VOC coaters will not be authorized by this permit. The permit pre-authorizes addition of water-based (very low VOC content) and UV-cured coating units.

1.4 Description of notifications and applications included in this action

Table 2. Notifications and applications included in this action

Date received	Application/notification type and description
06/30/2016	Administrative Amendment (IND20160001)
10/23/2018	Major Amendment (IND20180001)
02/08/2019 (supplemental information received 8/30/2019, 2/21/2020, 4/21/2020, 11/19/2021, 12/6/2021, and 1/10/2022. Conforming Application received 7/1/2022)	Major Amendment (IND20190001)
04/02/2021	Notification of Installation of Controls (IND20210001)

1.5 Facility emissions:

The net emission changes resulting from this permit action are reductions in allowable emission. This is because the small increases of emissions allowed for the conversion of coaters (less than 0.05 tons per year of $PM_{10}$and $PM_{2.5}$and 1.07 tons per year of VOC) is countered by emission reductions from existing equipment due to the combined effect of new operating limitations and the installation of additional control equipment required by the permit. It is difficult to ascertain the exact emission reduction in allowable emissions because many of the existing emission units subject to new operating limitations and additional control equipment were not included in permit 12300341-003, and other changes in emission units have occurred since permit 12300341-003 was issued. Under Permit No. 12300341-101, the revised total facility limited emissions are listed in Table 3.

Table 3. Total facility potential to emit summary

	PM tpy	PM_{10} tpy	$PM_{2.5}$ tpy	SO_2 tpy	NO_x tpy	CO tpy	Lead tpy	CO_2e tpy	VOC tpy	Single HAP tpy	All HAPs tpy

Part 70 Permit Program		X	
Part 63 NESHAP			X

1.6 Changes to permit

The MPCA has a combined operating and construction-permitting program under Minnesota Rules Chapter 7007. These rules mandate certain conditions that must be included in every permit, and also provide that MPCA has discretion to include additional conditions that the Agency determines to be necessary to protect human health and the environment. Under this authority, the following changes and additions to the permit are made through this permit action:

- The permit has been updated to reflect current MPCA templates and standard citation formatting;
- One-time testing requirements, initial compliance requirements, and other requirements that have been completed or no longer apply have been deleted;
- Some requirements have been reordered to help with clarity (i.e. units with similar emission limits are grouped);
- TCE removed as an allowable solvent for use in facility operations;
- Added authorization to use HAP-free VOC solvent formula in coating operations;
- Removed synthetic minor emission limits for total and single HAPs;
- Removed the carbon adsorption unit from the permit subject item inventory;
- Added authorization to convert t-DCE VOC coaters to use water-based and/or ultraviolet (UV)-cured coating only;
- Changed calculation procedure to demonstrate compliance with VOC and t-DCE emission limits;
- Removed VOC Pre-Cap pre-authorizing construction of additional VOC coaters;
- Added existing emergency generator, including applicable federal and state requirements;
- Added PreCap limit for combustion units used for air conditioning and space heating in North Building (STRU 38);
- Added ambient air monitors for VOC (t-DCE) and operation of ambient monitoring network;
- Added operation and maintenance of the sub-slab vapor remediation system;
- Added installation, operation, and maintenance of a permanent VOC (CEMS) at STRU 73;
- Added coining units and tin melt pot to the subject item inventory;
- Added die casting units and associated control equipment to the subject item inventory with applicable requirements;
- Added emission limits and compliance demonstrations for PM_{10}, $PM_{2.5}$, and lead based upon NAAQS modeling and AERA;
- Added modifications to stack parameters and control equipment required for NAAQS and AERA compliance;
- Added testing and monitoring requirements for coating room total enclosures and emissions;
- Added testing and monitoring requirements for several lead processing sources;
- Added research and development (R&D) and prototype coaters to subject item inventory;
- Added cooling towers and paved roads as fugitive emissions sources;
- Added replacement of the battery terminal post coater stack (STRU 73)
- Added solvent distillation unit, including operational requirements, emissions calculations, and recordkeeping;
- Added specific permit requirements in enforcement of the March 1, 2019 Stipulation Agreement and the January 17, 2020 Administrative Order.
- Replacement of the coating room's stack

Commented [A3]: This should apply to the Stipulation Agreement and Administrative Order as well, and these should be removed from the permit.

Commented [A4]: All unnecessary and burdensome.

2. Regulatory and/or statutory basis

2.1 New source review (NSR)

New Source Review is the federal air permit construction program authorized by the Clean Air Act. NSR includes the Prevention of Significant Deterioration (PSD) permit program for pollutants emitted in an area

that is in attainment for that pollutant, and the nonattainment new source review permit program for pollutants from sources located in an area that is not in attainment for that pollutant.

The permit carries forward limits on the facility for VOC such that it remains a minor source under NSR regulations. The facility uncontrolled emissions of PM/PM_{10}/$PM_{2.5}$are below NSR major source thresholds.

- **Listed source evaluation**
  The facility was evaluated to determine whether or not it would be considered a secondary metal production plant defined by the Clean Air Act. Secondary metal production plants are a listed source under 40 CFR § 52.21(b)(1)(iii) and subject to the 100 ton per year major source threshold. Applicability determinations issued by EPA describe the criteria under which a facility would be considered a secondary metal production facility. The major themes in these determinations include smelting and refining activities using furnaces, and which part of the process produces the most emissions. In the case of Water Gremlin, lead ingots purchased from a local refinery are melted at relatively low temperatures, which does not constitute smelting. In addition, the majority of emissions from the facility come from the die casting process, not melting. Therefore, it was reasonable to conclude that Water Gremlin is not a listed source under PSD regulations.

2.2 Part 70 permit program

The permit carries forward limits on the facility for VOCs and includes new limits on PM_{10} and $PM_{2.5}$such that it remains a non-major source under the Part 70 permit program.

2.3 New source performance standards (NSPS)

The permit includes the addition of an emergency compression ignition reciprocating internal combustion engine (CI RICE) subject to requirements of 40 CFR pt. 60, subp. IIII, Standards of Performance for Stationary Compression Ignition Internal Combustion Engines.

2.4 National emission standards for hazardous air pollutants (NESHAP)

The facility is prohibited from using HAP-containing materials in coating operations; therefore, the facility is an area source of HAPs under 40 CFR pt. 63 and no major source NESHAPs apply. However, it was determined that even though the facility is not subject to 40 CFR pt. 63, subp. MMMM - National Emission Standards for Hazardous Air Pollutants for Surface Coating of Miscellaneous Metal Parts and Products (subp. MMMM), the limits and monitoring requirement in Subp. MMMM are reasonable and appropriate controls to establish under Minn. R. 7007.0800 for Coating Rooms 1, 2, and 3 to ensure these rooms operate as permanent total enclosures. It is important to ensure total enclosure operation because the dispersion modeling for particulate matter and t-DCE assumed all emissions from coating rooms were captured and emitted from the coating room stack (STRU 73). Note that t-DCE is not a listed HAP.

The emergency generator is subject to the standards of 40 CFR pt. 63, Subp. ZZZZ - National Emissions Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines. Since the date of construction was in 2012, compliance with this standard is achieved through compliance with 40 CFR pt. 60, subp. IIII, Standards of Performance for Stationary Compression Ignition Internal Combustion Engines.

On February 23, 2022, the EPA proposed a rule to amend the 2007 NESHAP for Lead Acid Battery Manufacturing Area Sources (40 CFR Part 63, subp. PPPPPP), and the 1982 NSPS for Lead Acid Battery Manufacturing Plants (40 CFR Part 60, subp. KK). This rule would expand the applicability provisions in the area source NESHAP to facilities that make lead bearing battery parts or process input material including, but not limited to, grid casting facilities and lead oxide manufacturing facilities. It also updates the NSPS by revising lead emission limits for several types of operations at new, reconstructed, or modified sources. This rule is not yet finalized. Therefore, it is not known if these revisions will apply to Water Gremlin. However, if

Commented [A5]: This paragraph is unnecessary.

the final rule does apply to the Water Gremlin facility, then Water Gremlin must comply with the requirements of the NESHAP and/or NSPS even if those conditions are not specifically listed in its air permit as a permit condition. Additionally, if the rules are applicable to Water Gremlin and there are three or more years remaining in the permit term when the rules become effective the Permittee shall file an application for an amendment within nine months of promulgation of the applicable requirement, pursuant to Minn. R. 7007.0400, subp. 3

2.5 TCE ban

On May 16, 2020, Governor Walz signed the "White Bear Area Neighborhood Concerned Citizen Group Ban on TCE" Act (Minn. Stat. § 116.385), named for the residents that worked to get legislation passed to ban TCE. The law bans the use of TCE on or after June 1, 2022, in any facility that is required to have a state air permit, including manufacturing, processing, and cleaning processes. TCE is widely used in industrial and commercial processes and has some limited uses in consumer and commercial products. It is used as a solvent for degreasing metal parts during the manufacture of a variety of products and can be found in consumer products, including some wood finishes, adhesives, paint and stain removers, and brake cleaner. TCE can also be used in the manufacturing of other chemicals. TCE is categorized as a HAP by the Federal Clean Air Act (CAA) and a VOC by federal regulations. Minn. Stat. § 116.385, subp. 2, requires that "cessation of use must be made enforceable in the air emissions permit for the facility…" by June 1, 2022. This permit action prohibits the use of TCE at the facility as required by the TCE ban legislation.

Minn. Stat. § 116.385, subd. 3, requires that facilities replacing TCE with other chemicals must demonstrate that the new chemical is less toxic to human health. Water Gremlin replaced TCE based coating with t-DCE-based coating and this permit includes conditions to ensure this replacement is less toxic to human health.

Commented [A6]: t-DCE is less toxic than TCE, regardless of the permit levels. It's noncancer inhalation benchmark is more than an order of magnitude higher than TCE's. Further, TCE is a carcinogen and t-DCE is not.

2.6 Air Emissions Risk Analysis (AERA)

An AERA was completed by MPCA to ascertain the impact of t-DCE and lead emissions on inhalation health benchmarks established by the Minnesota Department of Health (MDH). The permit establishes new limits on t-DCE and lead that are protective of each inhalation health benchmark. Other air toxics present in UV coatings and those measured below detection levels in water-based coatings were evaluated by the AERA and deemed to not be a risk to human health.

2.7 2019 and 2020 enforcement actions

As the result of an investigation and enforcement action by the MPCA, a Stipulation Agreement between Water Gremlin and the MPCA was executed on March 1, 2019. The Stipulation Agreement outlines the violations alleged by the MPCA and includes a civil penalty. Part 10 of the Agreement included numerous corrective actions and requirements to be completed by Water Gremlin. The Permittee was required to complete all corrective actions and requirements prior to issuance of this permit. A copy of the executed Stipulation Agreement may be found in Attachment 4 to this TSD. The Stipulation Agreement will continue to be in effect until the MPCA terminates it independently of the effective date of the issuance date for Permit No. 12300341-101.

An Administrative Order was issued to Water Gremlin on August 22, 2019 (2019 Order) for the facility to immediately cease TCE-based VOC coating operations after the remediation investigation revealed soil vapor contamination beneath the facility. A second Administrative Order was issued on January 17, 2020 (2020 Order) outlining the steps necessary for the facility to resume non-TCE VOC coating operations. The 2020 Order included corrective actions to be completed before the facility could restart coating operations, as well as additional operating requirements that must be followed until the 2020 Order is terminated. Water Gremlin completed the required corrective actions that were preconditions to resume non-TCE VOC coating operations under the 2020 Order on March 1, 2019. The permit requires continuous compliance with the 2020 Order until it is terminated by the MPCA independently of the effective date of issuance of

Permit No. 12300341-101. Copies of the 2019 and 2020 Administrative Orders are included as Attachment 5 to this TSD.

The permit acknowledges the Stipulation Agreement and Administrative Order as a clarification, so members of the public are assured these are not automatically terminated with the issuance of Permit No. 12300341-101. In addition, this acknowledgement will be helpful for compliance and enforcement staff such that it is readily clear the Water Gremlin facility is subject to other MPCA enforcement documents besides the permit. The permit includes a sunset provision for the Stipulation Agreement and Administrative Order when MPCA terminates these two enforcement documents independently from the permit issuance.

The permit includes several specific provisions from the Agreement and Administrative Order that are to be continued into the permit term independently of the status of the Agreement and Administrative Order. These are compliance demonstration requirements that were deemed technically appropriate and necessary to ensure continued compliance with the permit limitations as required under Minn. R. 7007.0800.

Commented [A7]: The Stipulation Agreement and Administrative Order should be terminated as Water Gremlin met all the necessary conditions. It is unreasonable to have multiple and conflicting compliance documents, which lead to ambiguity, confusion, and inefficiency. Specifically, for example, the Administrative Order and the air permit require different methods for calculating total VOC emissions.

Commented [A8]: This paragraph explains again why the Administrative Order and Stipulation Agreement should be terminated upon issuance.

2.8 Approved Replicable Methodology (ARM)

ARM was defined as part of the EPA's 2009 Flexible Air Permitting Rule at 40 CFR subp. 70.2 and is part of MPCA's approved state and Title V permitting program. ARM language includes the permit terms that specify a protocol for re-setting a parameter required by the permit as defined at Minn. R. 7007.0100, subp. 6b. Per MPCA guidance, when the initial parameter is known or can reasonably be determined upfront, and where the permit includes periodic testing which may re-set the parameter, the permit should contain the parameter, as well as an ARM or protocol, for revising the parameter through testing. As long as the Permittee is implementing the ARM as required by the permit, the permit does not need to be reopened to revise the parameter. Every level of permit amendment (from administrative to major) can be used to incorporate revised parameters that were approved via an ARM. Alternatively, in the absence of ARM language in the permit, a reopening for establishing the revised parameter would require a major amendment process to be incorporated into the permit due to the case-by-case and site-specific nature of the parameter being revised.

The ARM itself is a case-by-case and site-specific requirement and is a regulatory construct that is also used in state permits. Therefore, the establishment or revision of the ARM provisions requires a major amendment process under Minn. R. 7007.1500, likely triggering one or more of the following: subp. 1(A) (revision to monitoring), 1(B) (case-by-base limit), and 1(C) (used for assuring compliance with a limit taken to avoid an applicable requirement). The permit includes ARM language to reset parameters such as emission factors, transfer efficiencies and exhaust flow rates.

2.9 Commercial disclosure regarding facility operations

The MPCA requires that the Permittee conduct a meeting annually to disclose to the community information regarding the facility's operations due to the significant public interest and concern about the facility's prior and ongoing operations. Prior enforcement actions involved potential health impacts to the community located near the facility. Information reported by the public was also connected to air emissions and take-home lead issues. The Permittee has represented to the MPCA that it intends to reduce air emissions through reductions in t-DCE use. These meetings are an opportunity for the public to understand the Permittee's operations that may impact the community, including any changes the facility is making to reduce air emissions, and to learn about its regulatory compliance status. The MPCA has determined that these meetings are necessary for the ongoing oversight of the Permittee's operations and will inform the MPCA's finding that the Permittee will operate its facility in compliance with its permit conditions. These meetings are a reasonable method for obtaining and exchanging information, will aid oversight, and supplement inspections conducted at the facility. MPCA believes annual community meetings are necessary for the protection of human health and the environment.

Commented [A9]: There is no provision under Minnesota law that requires the Permitee to conduct annual meetings, and no such requirement should be included in the permit.

2.10 Regulatory overview

Table 5. Regulatory overview of units affected by the modification/permit amendment

Subject item*	Applicable regulations	Rationale
TFAC 1 (Water Gremlin Co.)	Minn. Stat. 116.385	Trichloroethylene (TCE) Ban. The Permittee may not use trichloroethylene at its permitted facility after June 1, 2022, including in any manufacturing, processing, or cleaning processes, except as described under the statute. The permittee is required to demonstrate that the solvent that replaces TCE is less toxic to human health.
	Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)	Air Emissions Risk Analysis (AERA) and NAAQS modeling. The permit establishes conditions in which revised ~~AERA~~ RASS and dispersion modeling analyses must be done following changes to the parameters established by the AERA and dispersion model.
		Equivalent or Better Dispersion Modeling (EDM). Requirements specifying conditions in which a permit modification triggers the requirement to remodel pollutants described in Appendix C.
		Ambient Air Monitoring. Operation and maintenance of an ambient air monitoring network around the facility demonstrates continuous compliance with the applicable t-DCE health benchmark.
		General Public Preclusion Plan. Implementation and maintenance of the plan to prevent the general public from entering the ambient air boundary established during dispersion modeling.
	Minn. R. 7007.0800, subp. 2(B), Minn. Stat. 116.07, subd. 9(2)]	Annual Community Engagement Meeting to update the community and answer questions on facility operations and overall compliance with environmental permits and regulations.
COMG 1 (VOC and 1,2 (trans) Dichloroethylene Limits and VOC Coater, Water-Based Coater, UV Coater, and Solvent Distillation Operation Requirements)	40 CFR § 52.21(b)(1)(i)	Prevention of Significant Deterioration (PSD). Limits taken to avoid major source under PSD for all non-combustion emissions of VOC, including uncaptured emissions.
	40 CFR § 70.2	Limits to avoid Part 70. The permit limits VOC emissions to less than Part 70 thresholds. Requirements include monthly compliance calculations based on daily usage records, purchase, and inventory recordkeeping.
	Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385 subd. 3	Air Emissions Risk Analysis (AERA). The AERA, the evaluation of ambient air measures of t-DCE and records of actual operation were used to established permit limits on t-DCE emissions in which ambient concentrations remain below health benchmarks established by the Minnesota Department of Health. Requirements include daily compliance calculations, daily recordkeeping of t-DCE usage, recovery from the distillation unit, t-DCE sent out of the facility as waste and t-DCE emitted from outside the coating rooms. It is a limit based on a 365-day rolling sum due to use of t-DCE at the facility being so close to the limit.

Commented [A10]: This should only reflect required updates to the RASS and NAAQS modeling. MPCA is the author of the AERA for this facility, not Water Gremlin.

Commented [A11]: Modeled compliance and usage tracking make this provision unnecessary.

Commented [A12]: There is no provision under Minnesota law that requires the Permitee to conduct annual meetings, and no such requirement should be included in the permit. This comment applies to all similar requirements in the permit.

Subject item*	Applicable regulations	Rationale
	Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7007.0800, subps. 4-6, Minn. Stat. 116.07, subd. 4a(a), Minn. Stat. 116.385, subd. 3	t-DCE VOC Solvent Formulation. The permit limits the allowable VOC solvent formulation to that which was characterized by the AERA. The permit specifies the conditions under which the formula may be changed.
		Reconciliation of Predicted Stack Concentration and CEMS Readings. The Permittee must reconcile predicted concentrations and CEMS readings to verify usage records do not need an audit to ensure reliability of records.
		t-DCE purchase and inventory records audit. Each calendar quarter, the Permittee must audit purchase records and existing inventory of 1,2-(trans-) Dichloroethylene VOC-containing material, and 1,2-(trans-) Dichloroethylene VOC-containing material usage records, and keep records for each quarterly audit.
		Water-Based Coating Formulation. The permit limits the allowable water-based coating formulation to that which was characterized by the AERA. The permit specifies the conditions under which the formula may be changed.
		UV Coating Formulation. The permit limits the allowable UV coating formulation to that which was characterized by the AERA. The permit specifies the conditions under which the formula may be changed.
		Conversion of t-DCE VOC Coating. Pre-authorization allowing the conversion of coaters using t-DCE VOC coating to use water-based or UV coating only.
		Conversion of Application Method of Water-Based coaters. Pre-authorization to convert water-based spray coaters to dip/drip coaters, and vice versa.
		Conversion of Water Based Coaters and UV Coaters. Pre-authorization allowing the conversion of coaters using water-based coating to use UV coating and vice versa.
		Replacement and Addition of Water Based Coaters and UV Coaters. Pre-authorization allowing the replacement and addition of coaters using water-based and UV coatings.
		Replacement of Existing t-DCE VOC Coaters. Pre-authorization allowing the replacement of existing t-DCE VOC coaters of equal or lower design capacity and that does not increase emissions of t-DCE, PM_{10}, or $PM_{2.5}$.
		Prohibition to add new t-DCE VOC coater that are not replacing existing t-DCE VOC coaters.
		Change of location of Water-Based Dip/Drip coaters. Pre-authorization allowing the change of location of existing water-based dip/drip coaters to locations outside the coating rooms exhausting through STRU 73.
		t-DCE VOC Storage and Transfer. Handling and storage requirements to minimize emissions from evaporation loses and spills.
		t-DCE VOC Coater Installation and Maintenance. Specifications for VOC coater installation and maintenance as required by the Administrative Order.

Commented [A13]: Usage records are required to be maintained by the company. This provision is burdensome and unnecessary, and may not provide reliable data.

Subject item*	Applicable regulations	Rationale
COMG 2 (PM10 and PM2.5: Limits and Compliance Requirements for Ultraviolet (UV) Battery Terminal Post Coaters)	40 CFR § 52.21(b)(1)(i)	Prevention of Significant Deterioration (PSD). Limits taken to avoid major source under PSD for VOC emissions. Requirement requires to comply with requirements in COMG 1.
	40 CFR § 70.2	Limits to avoid Part 70. The use of control equipment complying with COMG 14 is needed to maintain the PM_{10} and $PM_{2.5}$ emissions at less than Part 70 thresholds. Other requirements include daily compliance calculations, and recordkeeping. The calculations are based on approved emission factors and required control efficiencies. The daily calculations are required because the PM_{10} and $PM_{2.5}$ limits for compliance with NAAQS serve the purpose of also demonstrating compliance with this requirement as well.
	Minn. R. 7007.0800, subp. 2(A) & (B), Minn. R. 7009.0020-7009.0090, Minn. Stat. 116.07, subd. 4a(a)]	NAAQS Modeling. The dispersion model establishes permit limits on PM_{10} and $PM_{2.5}$ emissions such that ambient concentrations remain below NAAQS thresholds. Requirements include use of control equipment, maintenance of dispersion characteristics, coating usage recordkeeping, and daily compliance calculations based on approved emission factors and required control efficiencies. The daily calculations are required because the PM_{10} and $PM_{2.5}$ are 24-hour standards.
COMG 4 (PM10 and PM2.5: Limits and Compliance Requirements for VOC Spray Battery Terminal Post Coaters)	40 CFR § 52.21(b)(1)(i)	Prevention of Significant Deterioration (PSD). Limits taken to avoid major source under PSD for VOC emissions. Requirement requires to comply with requirements in COMG 1.
	40 CFR § 70.2	Limits to avoid Part 70. The use of control equipment complying with COMG 14 is needed to maintain the PM_{10} and $PM_{2.5}$ emissions at less than Part 70 thresholds. Other requirements include daily compliance calculations, and recordkeeping. The calculations are based on approved transfer efficiencies and required control efficiencies The daily calculations are required because the PM_{10} and $PM_{2.5}$ limits for compliance with NAAQS serve the purpose of also demonstrating compliance with this requirement as well.
