

# Denise Gullickson

Simply stated:

- \* DO NOT Remove the air monitor form the battery terminal coater stack.
- \* DO NOT Remove the vapor remediation system requirements.
- \* DO NOT Remove the ambient air monitoring requirements at the perimeter of the property.
- \* Purchasing and use inventories of air toxins, lead etc. should be audited not only by Water Gremlin, but by the MPCA on a periodic, unannounced basis.

How dare this company continue to try and find ways around measurable accountability, given their history. Not only does Water Gremlin need to find a place to operate OUTSIDE of any residential area, they need to adhere to STRICT, MEASURABLE regulation as long as they pose a danger to public health.
