

## John Sullivan

Thank you for developing a plan to deal with our waste. We can do better! One "simple" thing I would suggest is to outlaw the production and use of any materials that are not recyclable. There seems to be a market for 1,2,5 plastics as that is what is being currently collected AND I HOPE IS BEING RE-USED AND NOT SENT TO A LANDFILL. Put in place a law that makes the manufacture of all other types of plastics illegal. Businesses that currently make non-recyclable/single use plastics would have to shift their production to making only recyclable plastics. It can be done! Also - until trash facilities can pull out of the waste stream and recyclable "black Plastic" - also make that illegal to produce. I would not be in strong favor to use tax dollars to fund businesses to re-tool to change from making non-recyclable materials to recyclable materials, but if needed, do it.
