

Highland Sanitation & Recycling

Yard waste and food waste mixed together is not addressed in plan. Highland Sanitation's haulers would bring these mixed wastes to composting facilities if they accepted it. There is concern about blue bags, seems like a band aid solution. There should be incentives for home composting for yard waste.

Strategy 20 should be more bold. We just experienced the hottest days on earth. Reusable market is there. Plastic bags fees are ignored and don't change behavior. Be bolder with strategies.

Strategy 21 should be required. If it's not built into the base cost, it's just passed on to the consumers. Stop with incremental baby steps. Reuse focus is great to see.

Tax breaks or credits for things like garage sales should be included.

Would like to see PCA take the lead in creating better signage and messaging around these issues.
