

## Eric Brace

Appreciate the thoughtfulness and effort in the plan to reduce waste in the area. Personally feel the amount of garbage produced is unnecessary and can be improved with simple efforts by all. My family of four produces a 13gal bag of garbage or less every 2weeks and it pain me to see overflowing garbage containers week in and week out.

- focus reduction of single use plastics
- find method to make majority of take-out containers compostable
- work to encourage more organics drop off use or composting as eliminating or removing food waste from garbage greatly reduces the volume

Together we can do it!
