

Bridget Diep

I currently try to recycle my organic in the bags provided by the county, but find it inconvenient to have to haul my own waste to a special site. There is an option to have our garbage company take away our organics, but with an extra fee attached to an already rising bill for regular garbage service. I can see why others aren't as quick to do their part for the environment with inconvenience and added costs. Making it convenient and free for curbside pickup of organic waste would definitely help!! I am excited to see the quick overview of the future plans for reducing waste!! Thank you. I also feel that so much waste comes out of businesses-they should be required to recycle paper, plastic and organics.
