

# WILLIAM BANGSUND

## General

- Submitting the report 18 months ahead of termination of the CD means that two monitoring events and maybe a topographic survey will be excluded.

## Leachate

- It is assumed that landfill covers leak slightly, therefore some leachate will accumulate. How is this addressed in the guidance?
- Are there examples of passive leachate treatment that MPCA finds acceptable?
- The guidance suggests a test of leachate accumulation. How does the 1 ft rule factor in?

## References

- Do reference materials (closure document, plans and specs, reports, official correspondence, etc) need to be included, or just cited?
