

Lisa Ciorlieri

Please add Dark Lake to the Impaired Waters List. I would like to add that listing impairments isn't enough. MPCA must act as true regulators. Sulfate pollution increases toxic mercury contamination of fish. There are more than EIGHT BILLION PEOPLE on the planet. Human activity, much of it damaging and detrimental to the earth (habitat destruction, Americans' love of convenience, fast food and plastic everything) is all pervasive. We must protect our waters and wildlife at all costs.
