

Steve Jorgenson

Thanks for your hard work to control pollution; I support your recent efforts with the Impaired Waters List. I offer the following suggestions to improve so we can move faster to remediation of the damages identified: 1) please study and establish sulfate limits and admit that sulfate exacerbates mercury contamination; 2) add Dark Lake, contaminated by mining pollution, to the Impaired Waters List; and 3) create and urgently implement a plan reducing mercury contamination to restore the impaired waters.
