

# John Munson

To my fellow man who all drinks from & needs the same water to survive as a population,

I will keep this short & sweet. Imaging the red you see isn't JUST "impaired water." Imagine all that red was blood over taking our water. I think you'll be able to deduce that protecting our water is crucial to not only our survival as species, but your own, your family's. Please remember that if you want to keep making money & have people living in Minnesota, you'll have to have a glass of water to drink. To bathe. To clean. To live.

Please lead with your heart when making decisions that are paramount to the world's & humanities survival.
