

# David Eischens

To the Minnesota Department of Natural Resources Minnesota Public Utilities Commission  
Governor Tim Walz and all other guilty parties to this criminal behavior!

Are you folks not in-part responsible for the condition Minnesota Waters are in today?

Are you not responsible for the water to the 20 million people who rely upon the Mississippi River for drinking water?

Will the state of MN pay for the millions, possibly billions of dollars it will cost to install Reverse Osmosis Water Filtration systems that will be needed in every single community in this state? The only proven method to mitigate contaminated drinking water are those Reverse Osmosis systems, like the ones installed in Woodbury MN due to contaminated drinking water.

Will our State representatives explain to their children that because of their greed and willingness to circumvent federal protections for corporate interests, that they can no longer utilize the waters in Minnesota, which by the way will also affect folks clear down to the Gulf of Mexico.

Thanks a lot Minnesota politicians and corporate criminals. Mi'iw
