

## Minakwa Golf Course

American Crystals expired permit that they are currently operating under includes irrigation water for Minakwa golf course. With the new permit it was included but later removed this spring. I'm working to get a river irrigation permit but wasn't given enough time to do so before this permit will go in place. My understanding is as soon as this permit is awarded they will have to stop sending irrigation water. This leaves Minakwa golf course without an irrigation water source when we need it most. Can you allow irrigation water to continue to be sent through 2024 so I can get my alternate river water source permits acquired and piping changes completed? We could continue to operate under the current monitoring guidelines in the current permit.
