

## Prairie Island Indian Community

This shouldn't be aloud to renew in this manner. The water is indigestible already. There should be zero waste, zero motor boats and nothing polluting or interfering with natural resources of something you don't own, gather resources from, have treaty rights or Swim in. Are any of you actually educated I'm realizing not. Can you please send me all your information that was used to allow this judgement for the wildlife? Can you let me know what colleges you went to. What political advantages your financially involved in? I'm confused but really curious as I am just learning what it means to be educated. Can you send me contact information for everyone that has approved everything since this company has been open? Really curious now I completely disagree with your education and educators involved in this.
