Please do not increase the allowable maximum load of total suspended solids. Please maintain or decrease current the allowable maximum load of total suspended solids.

I am currently a resident of Duluth, MN, but I grew up in Cottage Grove. Regardless of where I currently live in MN, I feel that as a citizen of the USA, my comments are relevant. The Mississippi River spans the entire mid-section of our country, and further polluting its waters impacts not only Minnesotan's but all the people and ecosystems that this river crosses.

Please prioritize the health and vitality of this incredibly important waterway over economics. Clean water is the most important resource on our planet and as Minnesotan's we have an obligation to current and future generations to protect the water.
