

Annette Lagoon

Do the following categories adequately provide for the types of benefits that you would like to see in a community benefit agreement?

- facility implements measures at its facility to avoid contributing to stressors
- facility implements measures at its facility to minimize contributions to stressors
- facility implements measures in the community to reduce stressors to which the facility will contribute
- facility implements measures in the community to reduce stressors to which the facility will not contribute
- facility implements measures to provide a net environmental benefit

When is someone going to check our polluted water? Why are you not allowing us in the 3M settlement? Why did they change our lots and blocks. Are you the ones gaslighting us? Why are people allowed to collect that never lived here? Where do we sign up for getting our settlement? We are the victims? Yet your parole that are not exposed giving false readings? Why would you build another development on tainted grounds?

The MPCA is considering prioritizing the following categories (the same categories from the previous question) based on their ability to offset environmental and public health stressors in a community. Would you support this approach?

- facility implements measures at its facility to avoid contributing to stressors
- facility implements measures at its facility to minimize contributions to stressors
- facility implements measures in the community to reduce stressors to which the facility will contribute
- facility implements measures in the community to reduce stressors to which the facility will not contribute
- facility implements measures to provide a net environmental benefit

Why are people living in our neighborhood not on the settlement lists? Why are you not testing our water? The people in bio monitoring are giving false readings? Why did you build another community on top of contaminated ground. Why did they raise our taxes on contaminated ground, what about the buyout or subsidies? Why are people allowed to claim our addresses? Why did our lots and blocks change? What about the oil leaking from the pipeline. We are never informed of the danger around us. When do we collect on the

settlement. Please put our name on settlement because we all have cancer. Thank you

Who should represent communities in a community benefit agreement?

Well let's see someone who is not driven by greed or money to allow innocent victims to continue to be contaminated and lied to. Plus they are all stealing everything we've worked for because of our cancer. for sure not our old roofers jon and Amy DuPont, professional hackers.

What methods should be required for holding public meetings? What information is most important to include in a public meeting notice?

Let us know when they are. There is no information but then again they steal our daily mail. The police don't do anything about these people stealing our identities to claim our shares of settlement using their names but our contamination blood and grounds. Zoom or in person but we need to know when these are and where? You're so worried about the fish and wildlife but don't humans count anymore because we can't even get clean water.

What methods should be required for taking public comments and communicating back what was heard?

Well if you actually listen to our concerns go door to door in our neighborhood because none of us are informed about the pipeline settlement either. This group is collecting using our addresses and taking our info out so no one knows about us.
