

## Norman Herron

What feedback do you have on the indicators that are **LIKELY** to be included in cumulative impacts analyses?

I appreciate the extensive work that MPCA has done on these categories of data likely to be included in the final cumulative impacts analyses. I strongly support all of these data indicators as essential to be included.

Review the data indicators that have **POTENTIAL** to be included in cumulative impacts analyses below and select five which should be included.

MPCA permitted sites and other agency interests

MPCA compliance and enforcement issues

Heavy duty truck traffic

Percent of population living near highways

Percent of public schools near highways

What feedback do you have on the indicators that have **POTENTIAL** to be included in cumulative impacts analyses?

I believe that the potential data: built environment, drinking water quality, MPCA permitted facilities, public health measures, social factors, and transportation pollution are **ALL** serious impacts on human health and welfare. They should all be definitely included.

Review the data indicators that are **UNLIKELY** to be included in cumulative impacts analyses below and select five which should be included.

Community resilience indicator

Hazardous waste sites

Homelessness

Agricultural runoff

Industrial runoff

What feedback do you have on the indicators that are UNLIKELY to be included in cumulative impacts analyses?

As these data indicators may be covered under the canopy of likely to be included data, some may be redundant.
