

Robert Shimek

My comments will be short and brief. 1. Move Manoomin (naturally occurring stands of wild rice) from Class 4 waters to Class 2 waters. 2. Research impacts of low levels of atrazine on Manoomin. 3. Research impacts of Atrazine in combination with other agricultural pesticides and nutrients. 4. Research and report on impacts of Minnesota water quality on Treaty Rights, Responsibilities, and Obligations in the ceded lands of the 1855 and 1863 land cession treaty areas
